# **SWITCH Series Commands Configuration Manual**

---

# 1 Mtu

In the interface configuration mode, use this command to set the MTU of the interface.  
**Mtu <64-10240>**

| Parameter | parameter | description             |
|-----------|-----------|-------------------------|
|           | 64-10240  | Can be set in the range |

|         |                                    |
|---------|------------------------------------|
| Default | The default configuration is 1522. |
|---------|------------------------------------|

|      |                           |
|------|---------------------------|
| Mode | Global configuration mode |
|------|---------------------------|

|       |      |
|-------|------|
| Usage | Null |
|-------|------|

|         |   |
|---------|---|
| Example | Set the mtu value<br>SWITCH(config)# <b>mtu 10240</b> |
|---------|---|

| Command | command                                       | description                                |
|---------|---|--|
|         | <b>show interfaces gigabitEthernet id mtu</b> | View the interface mtu status information. |

|         |  |
|---------|--|
| Example | SWITCH# <b>show interfaces GigabitEthernet 0/1 mtu</b> |
|         | Interface   MTU<br>-----+-----<br>gi0/1   10240        |

## 2 link-Aggregate Port Command

### 2.1 Configure relevant commands

#### 2.1.1 link-aggregation load-balance

Configure a traffic balancing algorithm for link-aggregation port (AGG). Use the no option for this command to set the recovery traffic balance to the default.

**link-aggregation load-balance {mac|ip-mac}**

**no link-aggregation load-balance**

|           | parameter     | description   |
|-----------|---------------|---|
| Parameter | <b>MAC</b>    | The traffic is allocated according to the source MAC address of the incoming packets. In each AGG, packets from different MAC addresses are assigned to different ports. Packets from the same MAC address use the same port. |
|           | <b>IP+MAC</b> | Traffic is allocated based on source IP and source MAC. Different source IP – source MAC traffic is forwarded through different ports, and the same source IP – source MAC is forwarded through the same link.                |

Default Null

Mode Global configuration mode

---

|         |   |             |
|---------|---|-------------|
| Usage   | Use the show link-aggregation group command to view the traffic balancing algorithm |             |
| Example | SWITCH(config)# <b>link-aggregation load-balance ip</b>                             |             |
| Command | command   | description |

## 2.1.2 link-aggregation

Create a link-aggregation group.

**link-aggregation {group-number mode { manual | lacp }}  
no link-aggregation {group-number}**

|           | parameter    | description                                   |
|-----------|--------------|---|
| parameter | group-number | The link-aggregation member port group number |
|           | manual       | Use static mode                               |
|           | lacp         | Use LACP protocol                             |

|         |   |
|---------|---|
| Default | The physical port does not belong to any link-aggregate port by default |
|---------|---|

|      |                           |
|------|---------------------------|
| Mode | Global configuration mode |
|------|---------------------------|

|       |   |
|-------|---|
| Usage | You can configure manual mode and lacp mode. No command requires no interface in the aggregation group. |
|-------|---|

|         |   |
|---------|---|
| Example | the following example creates a link aggregation group 1<br>SWITCH(config)# <b>link-aggregation 1 mode manual</b> |
|---------|---|

## 2.1.3 Interface link-aggregation

Set a physical port as a member port of the link-aggregation port. Use the no option of the command to remove the link-aggregation Port member attribute of the port.

**link-aggregation group-number [active] passive|manual  
no link-aggregation {group-number}**

|           | parameter    | description                                   |
|-----------|--------------|---|
| parameter | group-number | The link-aggregation member port group number |

|         |   |
|---------|---|
| Default | The physical port default does not belong to any link-aggregate port. |
|---------|---|

| Mode                        | Interface configuration mode   |           |             |                             |   |
|-----------------------------|--|-----------|-------------|-----------------------------|---|
| Usage                       | All AGG member interfaces need to be in the same VLAN.   |           |             |                             |   |
| Example                     | <pre>SWITCH(config)# interface GigabitEthernet /1 SWITCH(config-if-GigabitEthernet0/1)# link-aggregation 1 active</pre>  |           |             |                             |   |
| Command                     | <table border="1"><thead><tr><th>parameter</th><th>description</th></tr></thead><tbody><tr><td>show link-aggregation group</td><td>Display the information of the link aggregation group</td></tr></tbody></table> | parameter | description | show link-aggregation group | Display the information of the link aggregation group |
| parameter                   | description  |           |             |                             |   |
| show link-aggregation group | Display the information of the link aggregation group  |           |             |                             |   |

---

## 2.2 Display relevant commands

### 2.2.1 show link-aggregation

Display link-aggregation settings.

**show link-aggregation [group|group-number ]**

| parameter | parameter   | description                                       |
|-----------|---|---|
|           | <b>show link-aggregate group</b>  | Show all link aggregation groups                  |
|           | <b>show link-aggregate group group-number</b>   | Displays a specific group of link aggregation     |
| Default   | Null  |   |
| Mode      | Privilege mode  |   |
| Usage     | If you do not specify the aggregate port interface number, all the information of the aggregate port will be displayed. |   |
| Example   | The following example shows information about link-aggregation 1:<br>SWITCH# <b>show link-aggregation group 1</b>       |   |
| Command   | command   | description                                       |
|           | <b>Show link-aggregation group</b>  | Display the status of all link aggregation groups |

---

# 3 Port mirroring command

## 3.1 Configure relevant commands

### 3.1.1 monitor session

Create a SPAN session and specify the destination port (monitor port) and source port (monitored port). Use the no option of the command to delete the session or remove the source port or destination port separately.

```
monitor session session_number {[ source interface GigabitEthernet port-id  
[both | rx | tx]] | [ destination interface GigabitEthernet port-id ]}  
no monitor session session_number {[ source interface GigabitEthernet port-id  
[both | rx | tx]] | [destination interface GigabitEthernet port-id ]}
```

|           | parameter  | description  |
|-----------|--|--|
|           | <i>session number</i>  | SPAN session number  |
| Parameter | <b>source interface</b><br><b>GigabitEthernet port-id</b>      | Specify the source port. For interface-id, specify the corresponding interface number, only the physical port, not for the SVI.        |
|           | <b>destination interface</b><br><b>GigabitEthernet port-id</b> | Specifies the destination port. For interface-id, specify the corresponding interface number, only the physical port, not for the SVI. |
|           | <b>both</b>  | While monitoring input and output messages.  |
|           | <b>rx</b>  | Only monitor the input message.  |
|           | <b>tx</b>  | Only monitor the output message  |

|         |   |
|---------|---|
| Default | Null  |
| Mode    | Global configuration mode   |
| Usage   | Switch port and AGG (separate port settings) can be configured as source and destination ports. The SPAN session does not affect the normal operation of the switch. SPAN sessions can be configured on a disabled port, however, SPAN does not work immediately until the destination and source port are enabled. A port can not be both a source port and a destination port. Use the <b>show monitor</b> command to display the operating status of the SPAN session. |

The following example shows how to create a SPAN session: Session 1. If the session has already been set up, first clear the configuration of the current session 1, and then set the port 0 interface to the port interface 0/1.

**Example**

```
SWITCH(config) # no monitor session 1
SWITCH(config) # monitor session 1 source interfaces
                  GigabitEthernet 0/2 both
SWITCH(config) # monitor session 1 destination interface
                  GigabitEthernet 0/1
```

|         | command                | description   |
|---------|------------------------|---|
| Command | <b>monitor session</b> | Create a SPAN session and specify the destination port (Monitoring port) and source port (monitored port) |

## 3.2 Display relevant commands

### 3.2.1 show monitor

Displays the status of the current SPAN configuration  
**show monitor**

| parameter | parameter | description |
|-----------|-----------|-------------|
|           | -         | -           |

**Default** All SPAN sessions are displayed by default

**Mode** Privilege mode

**Usage** Null

The following example shows how to display the current state of a SPAN session by using the **show monitor** privilege command

**Example**

```
SWITCH# show monitor
Session 1 Configuration
Source RX Port : gi0/9
Source TX Port : gi0/9
Destination port : gi0/10
Ingress State: disabled
```

**Command**

|  | Command                     | description   |
|--|-----------------------------|---|
|  | <b>show monitor session</b> | Displays the status of the current SPAN configuration |

---

# 4 Port isolation command

## 4.1 Configure relevant commands

### 4.1.1 isolate-port

Configure the port isolation in port mode and delete the configuration with the no command.  
By default, port isolation is disabled.

**Switchport protected**  
**no Switchport protected**

| parameter | parameter  | description                                 |
|-----------|--|---|
|           | <b>Switchport protected</b>  | Turn on port isolation configuration        |
| Default   | Turn off port isolation configuration  |   |
| Mode      | Port configuration mode  |   |
| Usage     | After the port isolation function is enabled, the port and port, port, and link aggregation group (AGG) can not be accessed from each other.   |   |
| Example   | <pre>The following is the isolation between port 0/1 and port 0/2.<br/>SWITCH(config)# interface GigabitEthernet 0/1<br/>SWITCH(config-if-GigabitEthernet0/1)# switchport protected</pre><br><pre>SWITCH(config)# interface GigabitEthernet 0/2<br/>SWITCH(config-if-GigabitEthernet0/2)# switchport protected</pre> |   |
| Command   | Command  | description                                 |
|           | <b>show interfaces GigabitEthernet 0/1 protected</b>   | View the current port isolation information |

## 4.2 Display relevant commands

### 4.2.1 show isolate-port

Displays the current port isolation configuration.  
**show interfaces port-id protected**

| parameter | parameter                                | description  |
|-----------|--|--|
|           | <b>show interfaces port-id protected</b> | Displays the current port isolation configuration. |
| Default   | Null                                     |  |
| Mode      | Privilege mode                           |  |
| Usage     | Null                                     |  |
| Example   | <b>SWITCH#show isolate-port</b>          |  |
| Command   | Command                                  | description  |
|           | <b>show interfaces port-id protected</b> | View the current port isolation information        |

## 5 Port speed limit

### 5.1 Configure relevant commands

#### 5.1.1 rate-limit

In port mode, enable / disable the port input / output rate.

**rate-limit {input | output}**  
**no rate-limit {input | output}**

| parameter | parameter  | description   |
|-----------|--|---|
|           | <b>rate-limit {input   output}</b>   | Open the port speed limit function, limiting the input and output speed.  |
|           | <b>no rate-limit {input   output}</b>  | Close the port speed limit function, limiting the input and output speed. |
| Default   | Turn off port speed limit function   |   |
| Mode      | Interface configuration mode   |   |
| Usage     | After the port speed limit is enabled, the upstream and downstream rates of the ports are controlled |   |

---

Example    The following is the configuration of port 0/1 configuration port uplink rate limit.  
SWITCH(config-if-GigabitEthernet0/1)# **rate-limit input 10000**

| Command | command                | description  |
|---------|------------------------|--|
|         | <b>show rate-limit</b> | View the current rate configuration information of the port. |

## 5.2 Display relevant commands

### 5.2.1 show rate-limit & show traffic-shap

Displays the current port rate limit configuration.

**show rate-limit**

**Show rate-limit interfaces {port-id}**

| parameter | parameter                                  | Description   |
|-----------|--|---|
|           | <b>show rate-limit</b>                     | Display the upstream rate limit configuration information for all the ports |
|           | <b>show rate-limit interface {port-id}</b> | Display the upstream rate limit configuration information of a current port |

|         |      |
|---------|------|
| Default | Null |
|---------|------|

|      |                |
|------|----------------|
| Mode | Privilege mode |
|------|----------------|

|       |   |
|-------|---|
| Usage | Display the upstream rate limit configuration information for all the ports |
|-------|---|

|         |   |                  |                 |
|---------|---|------------------|-----------------|
| Example | SWITCH# <b>show rate-limit interfaces GigabitEthernet 0/1</b> |                  |                 |
|         | Interface   | Ingress<br> kbps | Egress<br> kbps |
|         | gi0/1   | IGR-UNLIMIT      | 10000           |

| Command | command                                    | description   |
|---------|--|---|
|         | <b>show rate-limit interface port-list</b> | View the current port rate configuration information. |

---

# 6 Storm control

## 6.1 Configure relevant commands

### 6.1.1 storm-control

Enable or disable storm control in port mode: Use the storm-control command to enable storm control, Use the no command to turn off storm control.

```
storm-control {[broadcast |unknown-multicast|unknown-unicast] kbps}  
no storm-control
```

|           | parameter         | description               |
|-----------|-------------------|---------------------------|
| parameter | broadcast         | Broadcast packets         |
|           | Unknown-multicast | Unknown Multicast packets |
|           | Unknown-unicast   | Unknown unicast packets   |
|           | kbps              | Rate unit                 |

Default Turn off storm control

Mode Interface configuration mode

Usage After the storm control function is enabled, you can set the rate at which the packets received on the corresponding port (the rate of the received packets (broadcast, unknown multicast, unknown unicast)

Example The following is the port 0/1 open storm control configuration.  
SWITCH(config-if-GigabitEthernet0/1)#**storm-control broadcast kbps 1024**  
SWITCH(config-if-GigabitEthernet0/1)#**storm-control Unknown-multicas kbps 1024**  
SWITCH(config-if-GigabitEthernet0/1)#**storm-control Unknown-unicast kbps 1024**

|         | command                   | description   |
|---------|---------------------------|---|
| Command | <b>show storm-control</b> | Display storm control information                                     |
|         | <b>show interface</b>     | The storm control information is displayed in the interface attribute |

## 6.2 Display relevant commands

### 6.2.1 show storm-control

#### show storm-control

| parameter | command                   | description   |
|-----------|---------------------------|---|
|           | <b>show storm-control</b> | Display storm control information                                     |
|           | <b>show interface</b>     | The storm control information is displayed in the interface attribute |

Default Null

Mode Privilege mode

Usage View storm control configuration information

SWITCH# **show storm-control**

| Example | Interface | Broadcast | Unkown-Multicast | Unknown-Unicast | Action |
|---------|-----------|-----------|------------------|-----------------|--------|
|         |           | kbps      | kbps             | kbps            |        |
|         | gi0/1     | Disabled  | Disabled         | Disabled        | Drop   |
|         | gi0/2     | 1024      | Disabled         | Disabled        | Drop   |
|         | gi0/3     | Disabled  | Disabled         | Disabled        | Drop   |
|         | gi0/4     | Disabled  | Disabled         | Disabled        | Drop   |
|         | gi0/5     | Disabled  | Disabled         | Disabled        | Drop   |
|         | gi0/6     | Disabled  | Disabled         | Disabled        | Drop   |
|         | gi0/7     | Disabled  | Disabled         | Disabled        | Drop   |
|         | gi0/8     | Disabled  | Disabled         | Disabled        | Drop   |
|         | gi0/9     | Disabled  | Disabled         | Disabled        | Drop   |
|         | gi0/10    | Disabled  | Disabled         | Disabled        | Drop   |

---

# 7 Port Security

## 7.1 Configure relevant commands

### 7.1.1 Port-security

After you enable Port-security, configure the limit mac number of the port.Close Port-security.

**port-security [address-limit ] { Number of limitation} action {[discard|forward|shutdown] }**  
**no port-security**

| parameter            | parameter                | description                                      |
|----------------------|--------------------------|--|
| number of limitation |                          | Limit the number of macs, in the range of 1-256. |
|                      | discard forward shutdown | Action to be taken when limitation is reached.   |

**Default** Enable the port security function on the global switch, the port is turned off by default

**Mode** Port configuration mode

**Usage** Open port security, when the port to learn the number of mac in the end limit, the message was discarded.

**Example** The following example is configured gig0 / 1 maximum mac learning number is 200, over the message is discarded

```
SWITCH(config-if-GigabitEthernet0/1)# port-security address-limit 200  
action discard
```

| Command | parameter               | description            |
|---------|-------------------------|------------------------|
|         | <b>no port-security</b> | Turn off port security |

## 7.2 Display relevant commands

### 7.2.1 show port-security

Displays information about port security.

**Show port-security interface {port-id}**

---

| Parameter | parameter   | description   |
|-----------|---|---|
|           | <b>show port-security interface {port-id}</b>   | Display the port security configuration information of the specified port |
| Default   | Null  |   |
| Mode      | Privilege mode  |   |
| Usage     | Null  |   |
| Example   | Display the port security configuration information for gig1:<br><b>SWITCH# show port-security interfaces GigabitEthernet 0/1</b><br>Port   Security   CurrentAddr   Action<br>-----+-----+-----+-----<br>gi0/1   Enabled ( 200)   13   Discard |   |
| Command   | parameter   | description   |
|           | Show port-security  | View the port security global status                                      |

---

# 8 NTP/SNTP COMMAND

## 8.1 NTP Configure relevant commands

### 8.1.1 server

Configure the NTP/SNTP server IP address  
{[ntp|snntp]} **server**{server-ip}

| parameter | parameter | description       |
|-----------|-----------|-------------------|
|           | Server-ip | server IP address |

Default default server ip 216.229.0.179

Mode Global configuration mode

Usage Use this command to configure the NTP/SNTP server IP address

Example  
SWITCH(config)# **ntp server 192.168.100.150**  
SWITCH(config)# **snntp server 192.168.100.159**

| Command | command    | description                            |
|---------|------------|--|
|         | show ntp   | Display NTP configuration information  |
|         | show snntp | Display SNTP configuration information |

## 8.2 show ntp/snntp status

Display ntp/snntp function status, server address, port number

**show {[ntp|snntp]}**

| Parameter | parameter         | description                            |
|-----------|-------------------|--|
|           | <b>show ntp</b>   | Display NTP configuration information  |
|           | <b>show snntp</b> | Display SNTP configuration information |

---

|         |      |
|---------|------|
| Default | Null |
|---------|------|

|      |                |
|------|----------------|
| Mode | privilege mode |
|------|----------------|

|       |   |
|-------|---|
| Usage | Display ntp /snntp function status, server address, port number |
|-------|---|

Display NTP configuration information:

SWITCH# **show ntp**

NTP is Enabled

Example      NTP Server address: 192.168.100.150

NTP Server port: 123

Display SNTP configuration information:

SWITCH# **show snntp**

SNTP is Enabled

SNTP Server address: 192.168.100.159

SNTP Server port: 123

## 9EEE

Open the EEE function, the switch will automatically turn off part of the idle circuit, effectively reduce power consumption, energy saving

**eee**  
**eee interfaces GigabitEthernet {port-id}**

| Parameter | parameter                                       | description  |
|-----------|---|--|
|           | <b>eee</b>                                      | Turn on all port eee functions                         |
|           | <b>eee interfaces GigabitEthernet {port-id}</b> | Open the eee function for the specified port {port-id} |

|         |                           |
|---------|---------------------------|
| Default | Turn off the eee function |

## 10DDOS PROTECTION

### 10.1 Configuration ddos protection

#### 10.1.1 Turn on DDOS protection

Open the ddos protection function, you can defend against ddos attacks.

**Dos{[land-deny | smurf-deny | nullscan-deny | xma-deny | synfin-deny | syn-sportl1024-deny | pod-deny]}**

| <b>Parameter</b>    | <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr style="background-color: #cccccc;"> <th style="text-align: center; padding: 2px;">parameter</th><th style="text-align: center; padding: 2px;">description</th></tr> </thead> <tbody> <tr> <td style="text-align: center; padding: 2px;">land-deny</td><td style="text-align: center; padding: 2px;">Source IP equals to destination IP</td></tr> <tr> <td style="text-align: center; padding: 2px;">smurf-deny</td><td style="text-align: center; padding: 2px;">Smurf Attacks messages</td></tr> <tr> <td style="text-align: center; padding: 2px;">nullscan-deny</td><td style="text-align: center; padding: 2px;">Null scan attack</td></tr> <tr> <td style="text-align: center; padding: 2px;">xma-deny</td><td style="text-align: center; padding: 2px;">Xmascan:sequence number is zero and the FIN, URG and PSH bits are set</td></tr> <tr> <td style="text-align: center; padding: 2px;">synfin-deny</td><td style="text-align: center; padding: 2px;">SYN and FIN bits set in the packet</td></tr> <tr> <td style="text-align: center; padding: 2px;">syn-sportl1024-deny</td><td style="text-align: center; padding: 2px;">SYN packets with sport less than 1024</td></tr> <tr> <td style="text-align: center; padding: 2px;">pod-den</td><td style="text-align: center; padding: 2px;">Ping of death attacks</td></tr> </tbody> </table> | parameter | description | land-deny | Source IP equals to destination IP | smurf-deny | Smurf Attacks messages | nullscan-deny | Null scan attack | xma-deny | Xmascan:sequence number is zero and the FIN, URG and PSH bits are set | synfin-deny | SYN and FIN bits set in the packet | syn-sportl1024-deny | SYN packets with sport less than 1024 | pod-den | Ping of death attacks |
|---------------------|--|-----------|-------------|-----------|------------------------------------|------------|------------------------|---------------|------------------|----------|---|-------------|------------------------------------|---------------------|---------------------------------------|---------|-----------------------|
| parameter           | description  |           |             |           |                                    |            |                        |               |                  |          |   |             |                                    |                     |                                       |         |                       |

| smurf-deny          | Smurf Attacks messages   |           |             |           |                                    |            |                        |               |                  |          |   |             |                                    |                     |                                       |         |                       |
| nullscan-deny       | Null scan attack   |           |             |           |                                    |            |                        |               |                  |          |   |             |                                    |                     |                                       |         |                       |
| xma-deny            | Xmascan:sequence number is zero and the FIN, URG and PSH bits are set  |           |             |           |                                    |            |                        |               |                  |          |   |             |                                    |                     |                                       |         |                       |
| synfin-deny         | SYN and FIN bits set in the packet   |           |             |           |                                    |            |                        |               |                  |          |   |             |                                    |                     |                                       |         |                       |
| syn-sportl1024-deny | SYN packets with sport less than 1024  |           |             |           |                                    |            |                        |               |                  |          |   |             |                                    |                     |                                       |         |                       |
| pod-den             | Ping of death attacks  |           |             |           |                                    |            |                        |               |                  |          |   |             |                                    |                     |                                       |         |                       |

**Default** Turn off the DDOS protection function

**Mode** Global configuration mode

**Usage** Prevent the ddos attack.

---

|         |  |
|---------|--|
| Example | Turn on land-deny attack protection:<br>SWITCH(config)# <b>dos land-deny</b> |
|---------|--|

## 10.1.2 Turn off DDOS protection

**no dos {attack-name}**

| Command | Command                     | description                                       |
|---------|-----------------------------|---|
|         | <b>no dos {attack-name}</b> | Turn off a specific attack on the ddos protection |

|         |      |
|---------|------|
| Default | Null |
|---------|------|

|      |                           |
|------|---------------------------|
| Mode | Global configuration mode |
|------|---------------------------|

|       |  |
|-------|--|
| Usage | Turn off the defense against a specified DDOS attack |
|-------|--|

|         |  |
|---------|--|
| Example | Turn off land-deny attack protection:<br>SWITCH(config)# <b>no dos land-deny</b> |
|---------|--|

## 10.2 show DDOS protection

View the configuration information for DOS protection.

**Show {dos}**

| Parameter | parameter       | description   |
|-----------|-----------------|---|
|           | <b>Show dos</b> | View the configuration information for DOS protection |

|         |      |
|---------|------|
| Default | Null |
|---------|------|

|      |                |
|------|----------------|
| Mode | privilege mode |
|------|----------------|

|       |                           |
|-------|---------------------------|
| Usage | View the DDOS protection. |
|-------|---------------------------|

View the configuration information for DOS protection:

SWITCH# **show dos**

Example

| Type                      | State (Length)               |
|---------------------------|------------------------------|
| DMAC equal to SMAC        | disabled                     |
| Land (DIP = SIP)          | enabled                      |
| UDP Blat (DPORT = SPORT)  | disabled                     |
| TCP Blat (DPORT = SPORT)  | disabled                     |
| POD (Ping of Death)       | disabled                     |
| IPv6 Min Fragment Size    | disabled (1240 Bytes)        |
| ICMP Fragment Packets     | disabled                     |
| IPv4 Ping Max Packet Size | disabled (512 Bytes)         |
| IPv6 Ping Max Packet Size | disabled (512 Bytes)         |
| Smurf Attack              | disabled (Netmask Length: 0) |
| TCP Min Header Length     | disabled (20 Bytes)          |
| TCP Syn (SPORT < 1024)    | disabled                     |
| Null Scan Attack          | disabled                     |
| X-Mas Scan Attack         | disabled                     |
| TCP SYN-FIN Attack        | disabled                     |
| TCP SYN-RST Attack        | disabled                     |
| TCP Fragment (Offset = 1) | disabled                     |

## 11CPU Guard

### 11.1 Configuration CPU Guard

Configuring each type of packet bandwidth can suppress high-speed attack packets in the network.

```
cpu-protect {[cpu]} {bandwidth}pps_vaule  
cpu-protect {[sub-interface]} {[Message_type]}pps pps_vaule
```

| Parameter | parameter                          | description   |
|-----------|------------------------------------|---|
|           | <b>cpu bandwidth</b>               | Set cpu bandwidth(pps)  |
|           | <b>Sub_interface</b>               | Set the type of cpu protected packets                               |
|           | <b>cpu bandwidth pps_vaule</b>     | Set the total bandwidth of the cpu, in the range of 64-4000         |
|           | <b>message_type</b>                | The message types include:manage ,protocol,route                    |
|           | <b>Message_type] pps pps_vaule</b> | Set the bandwidth of each type of packet, in the range of 1 to 4000 |

Default

Cpu Port Bandwidth 1000pps  
Cpu Protect Manage Bandwidth 500pps  
Cpu Protect Route Bandwidth 200pps  
Cpu Protect Protocol Bandwidth 500pps

---

|         |  |
|---------|--|
| Mode    | Global configuration mode  |
| Usage   | To Configure each type of message bandwidth can inhibit high rate of attack packets in network.  |
| Example | <p>Set the total bandwidth of the cpu:<br/>SWITCH(config)# <b>cpu-protect cpu bandwidth 4000</b></p> <p>Set the bandwidth of manage packets:<br/>SWITCH(config)# <b>cpu-protect sub-interface manage pps 600</b></p> |

## 11.2 show CPU Guard

View the configuration information for CPU Guard.

**show cpu-protect**

**show cpu-protect cpu**

**show cpu-protect sub-interface {[manage | protocol | route]}**

|           | parameter  | description  |
|-----------|--|--|
| Parameter | <b>show cpu-protect</b>                              | View the configuration information for CPU Guard.    |
|           | <b>show cpu-protect cpu</b>                          | View the configuration information for CPU bandwidth |
|           | <b>Show cpu-protect sub-interface {message type}</b> | View the bandwidth of each type of packet            |

Default Null

Mode privilege mode

Usage View the CPU Guard information

Example

View the configuration information for CPU Guard:  
SWITCH# **show cpu-protect**

View the configuration information for CPU bandwidth:  
SWITCH# **show cpu-protect cpu**

View the bandwidth of each type of packet:  
SWITCH# **show cpu-protect sub-interface manage**

## 12Dual Configuration

### 12.1 backup the configuration file

**copy {[running-config | startup-config]} backup-config**

|           | parameter              | description  |
|-----------|------------------------|--|
| Parameter | <b>running-config</b>  | Backup the current configuration file to backup-config |
|           | <b>startup-config]</b> | Backup the startup-config file to backup-config        |

Default Null

---

|         |  |
|---------|--|
| Mode    | privilege mode   |
| Usage   | backup the configuration file  |
| Example | backup the running-config file:<br><b>SWITCH# copy running-config backup-config</b><br>backup the startup-config file:<br><b>SWITCH# copy startup-config backup-config</b> |

## 12.2 restore Configuration

**copy backup-config {[running-config | startup-config]}**

| Parameter | parameter       | description   |
|-----------|-----------------|---|
|           | running-config  | restore the current configuration file from backup-config |
|           | startup-config] | restore the startup-config file from backup-config        |

|         |  |
|---------|--|
| Default | Null   |
| Mode    | privilege mode   |
| Usage   | restore the configuration file   |
| Example | restore the running-config file:<br><b>SWITCH# copy backup-config running-config</b><br>restore the startup-config file:<br><b>SWITCH# copy backup-config startup-config</b> |

---

# 13RMON

## 13.1rmon event

**rmon event<1-65535>[log][trap COMMUNITY][description DESCRIPTION][owner NAME]**

|           | parameter               | description                              |
|-----------|-------------------------|--|
| Parameter | <1-65535>               | Specify event index to create or modify  |
|           | log                     | Specify to show syslog                   |
|           | trap COMMUNITY          | Specify SNMP community to show SNMP trap |
|           | description DESCRIPTION | Specify description of event             |
|           | owner NAME              | Specify owner of event                   |

Default Null

Mode Global configuration mode

Usage  
Use the **rmon event** command to add or modify a RMON event entry.  
Use the **no** form of this command to delete.  
You can verify settings by the **show rmon event** command.

The example shows how to add RMON event entry with log and trap action and modify it action to log only.  
SWITCH(config)# **rmon event 1 log trap public description test owner admin**  
SWITCH# **show rmon event 1**  
Rmon Event Index : 1  
Rmon Event Type : Log and Trap  
Rmon Event Community : public  
Rmon Event Description : test  
Rmon Event Last Sent :  
    Rmon Event Owner : admin  
SWITCH(config)# **rmon event 1 log description test owner admin**  
SWITCH# **show rmon event 1**  
Rmon Event Index : 1  
Rmon Event Type : Log  
Rmon Event Community :  
Rmon Event Description : test  
Rmon Event Last Sent :  
Rmon Event Owner : admin

## 13.2rmon alarm

```
rmon alarm<1-65535>interface {[port-id}{[broadcast-pkts|collision|crc-align-errors|drop-events|fragments|jabbers|multicast-pkts|octets|oversize-pkts|pkts|pkts1024to1518octets|pkts128to255octets|pkts256to511octets|pkts512to1023octets|ptks64octets|pkts65to127octets|undersize-pkts]}<1-2147483647>{[absolute|delta]} ring<0-2147483647><1-65535>falling<0-2147483647><1-65535>startup {[falling|rising|rising-falling]}[owner Name]  
no rmon alarm<1-65535>[owner NAME]
```

|           | parameter                     | description  |
|-----------|-------------------------------|--|
| Parameter | <1-65535>                     | Specify event index to create or modify.   |
|           | port-id                       | Specify the interface to sample.   |
|           | (variable)                    | Specify a mib object to sample.  |
|           | <1-2147483647>                | Specify the time in seconds that the alarm monitors the MIB variable.  |
|           | (absolute delta)              | Specify absolute to compare sample counter absolutely.   |
|           | <0-2147483647>                | Specify a number which the alarm trigger rising event.   |
|           | <1-65535>                     | Specify event index when the rising threshold exceeds.   |
|           | <0-2147483647>                | Specify a number which the alarm trigger falling event.  |
|           | <1-65535>                     | Specify event index when the falling threshold exceeds.  |
|           | falling rising rising-falling | Specify only to how rising or falling startup event. Or show either <u>rising</u> or <u>falling</u> startup event. |
|           | owner Name                    | Specify owner of alarm.  |

Default Null

Mode Global configuration mode

Usage Use the **rmon alarm** command to add or modify a RMON alarm entry.

Before add alarm entry,at least one event entry must be added.

Use the **no** form of this command to delete.

You can verify settings by the **show rmon alarm** command.

The example shows how to add RMON alarm entry that sample interface 1 packets delta Count every 300 seconds.Trigger event index 1 if over than rising threshold 10000,trigger Event index 2 if lower than falling threshlod.

SWITCH(config)# **rmon event 1 log**

SWITCH(config)# **rmon event 2 log**

SWITCH(config)# **rmon alarm 1 interface GigabitEthernet 0/1 pkts 300 delta**

**rising 1000 1 falling 100 1 startup rising-falling owner admin**

SWITCH# **show rmon alarm 1**

Rmon Alarm Index : 1

Rmon Alarm Sample Interval : 300

Rmon Alarm Sample Interface : gi0/1

Rmon Alarm Sample Variable : Pkts

Rmon Alarm Sample Type : delta

---

## 13.3rmon history

**rmon history <1-65535>interface {port-id}[buckets<1-50>][interval<1-3600>][owner NAME]**  
**no rmon history<1-65535>**

|           | parameter        | description                             |
|-----------|------------------|---|
| Parameter | <1-65535>        | Specify event index to create or modify |
|           | port-id          | Specify the interface to sample         |
|           | buckets<1-50>    | Specify the maximum number of buckets.  |
|           | interval<1-3600> | Specify time interval for each sample   |
|           | owner NAME       | Specify owner of history                |

Default Null

Mode Global configuration mode

Usage Use the **rmon history** command to add or modify a RMON history entry.  
Use the **no** form of this command to delete.  
You can verify settings by the **show rmon history** command.

The example shows how to add RMON history entry that monitor interface gig0/1 every 60 seconds and then modify it to monitor every 30 seconds.

SWITCH(config)# **rmon history 1 interface GigabitEthernet 0/1**  
**interval 60 owner admin**  
SWITCH# **show rmon history 1**  
Rmon History Index : 1  
Rmon Collection Interface: gi0/1  
Rmon History Bucket : 50  
Rmon history Interval : 60  
Rmon History Owner : admin

SWITCH(config)# **rmon history 1 interface GigabitEthernet 0/1**  
**interval 30 owner admin**  
SWITCH# **show rmon history 1**

---

```
Rmon History Index      : 1
Rmon Collection Interface: gi0/1
Rmon History Bucket    : 50
Rmon history Interval  : 30
Rmon History Owner     : admin
```

## 13.4clear rmon interface statistics

**clear rmon interface {port-id} statistics**

|           | parameter | description                    |
|-----------|-----------|--------------------------------|
| Parameter | port-id   | Specify the interface to clear |

Default Null

Mode privilege mode

Use the **clear rmon interface statistics** command to clear RMON etherStat Statistics those are recorded on interface.

Usage You can verify results by the **show rmon interface statistics** command.

The example shows how to clear RMON etherStat Statistics on interface gig0/1.

SWITCH# **clear rmon interfaces GigabitEthernet 0/1 statistics**

SWITCH# **show rmon interfaces GigabitEthernet 0/1 statistics**

===== Port gi0/1 =====

```
etherStatsDropEvents      : 0
etherStatsOctets          : 0
etherStatsPkts            : 0
etherStatsBroadcastPkts   : 0
etherStatsMulticastPkts   : 0
etherStatsCRCAlignErrors  : 0
etherStatsUnderSizePkts   : 0
etherStatsOverSizePkts    : 0
etherStatsFragments       : 0
etherStatsJabbers         : 0
etherStatsCollisions      : 0
etherStatsPkts64Octets    : 0
etherStatsPkts65to127Octets : 0
etherStatsPkts128to255Octets : 0
etherStatsPkts256to511Octets : 0
etherStatsPkts512to1023Octets : 0
etherStatsPkts1024to1518Octets : 0
```

Example

## 13.5show rmon interface statistics

**Show rmon interface {port-id} statistics**

| Parameter | parameter | description          |
|-----------|-----------|----------------------|
|           | port-id   | Specify port to show |

Default Null

Mode privilege mode

Use the **show rmon interface statistics** command to show RMON etherStat Statistics of interface

Usage You can verify results by the **show rmon interface statistics** command.

The example shows how to show RMON etherStat Statistics on interface gig0/1.

**SMC# show rmon interfaces GigabitEthernet 0/1 statistics**

===== Port gi0/1 =====

```
etherStatsDropEvents      : 0
etherStatsOctets          : 12313
etherStatsPkts            : 120
etherStatsBroadcastPkts   : 32
etherStatsMulticastPkts   : 85
etherStatsCRCAlignErrors  : 0
etherStatsUnderSizePkts   : 0
etherStatsOverSizePkts    : 0
etherStatsFragments       : 0
etherStatsJabbers         : 0
etherStatsCollisions      : 0
etherStatsPkts64Octets    : 11
etherStatsPkts65to127Octets : 86
etherStatsPkts128to255Octets : 23
etherStatsPkts256to511Octets : 0
etherStatsPkts512to1023Octets : 0
etherStatsPkts1024to1518Octets : 0
```

Example

## 13.6show rmon event

**show rmon event [<1-65535>|all]**

| Parameter | parameter | description                 |
|-----------|-----------|-----------------------------|
|           | <1-65535> | Specify event index to show |
|           | all       | Show all existed event      |

Default Null

---

|      |                |
|------|----------------|
| Mode | privilege mode |
|------|----------------|

|       |  |
|-------|--|
| Usage | Use the <b>show rmon event</b> command to show existed RMON event entry. |
|-------|--|

The example shows how to show RMON event entry.

SWITCH(config)# **rmon event 1 log trap public description test owner admin**

SWITCH(config)# **exit** //Returns the privilege mode

SWITCH# **show rmon event 1**

|         |  |
|---------|--|
| Example | Rmon Event Index : 1<br>Rmon Event Type : Log and Trap<br>Rmon Event Community : public<br>Rmon Event Description : test<br>Rmon Event Last Sent :<br>Rmon Event Owner : admin |
|---------|--|

## 13.7 show rmon alarm

**show rmon alarm [<1-65535> |all]**

| Parameter | parameter | description                 |
|-----------|-----------|-----------------------------|
|           | <1-65535> | Specify alarm index to show |
|           | all       | Show all existed alarm      |

|         |      |
|---------|------|
| Default | Null |
|---------|------|

|      |                |
|------|----------------|
| Mode | privilege mode |
|------|----------------|

|       |  |
|-------|--|
| Usage | Use the <b>show rmon alarm</b> command to show existed RMON alarm entry. |
|-------|--|

The example shows how to show RMON alarm entry.

SWITCH(config)# **SMC(config)# rmon alarm 1 interface GigabitEthernet 0/1**

**broadcast-pkts 300 delta rising 10000 1 falling 100 1 startup rising-falling**

**owner admin**

SWITCH(config)# **exit** //Returns the privilege mode

SWITCH# **show rmon alarm 1**

|         |   |
|---------|---|
| Example | Rmon Alarm Index : 1<br>Rmon Alarm Sample Interval : 300<br>Rmon Alarm Sample Interface : gi0/1<br>Rmon Alarm Sample Variable : BroadcastPkts<br>Rmon Alarm Sample Type : delta |
|---------|---|

---

```
Rmon Alarm Type      : Rising or Falling
Rmon Alarm Rising Threshold : 10000
Rmon Alarm Rising Event   : 1
Rmon Alarm Falling Threshold : 100
Rmon Alarm Falling Event    : 1
Rmon Alarm Owner        : admin
```

## 13.8show rmon history

**show rmon history [<1-65535>|all]**

| Parameter | parameter | description                   |
|-----------|-----------|-------------------------------|
|           | <1-65535> | Specify history index to show |
|           | all       | Show all existed history      |

Default Null

Mode privilege mode

Usage Use the **show rmon history** command to show existed RMON history entry.

The example shows how to show RMON history entry.

```
SWITCH(config)# rmon history 1 interface GigabitEthernet 0/1 interval
30 owner admin
SWITCH(config)# exit
SWITCH# show rmon history 1
Rmon History Index      : 1
Rmon Collection Interface: gi0/1
Rmon History Bucket     : 50
Rmon history Interval   : 30
Rmon History Owner      : admin
```

Example

## 14ARP Inspection

### 14.1arp inspection

**arp-inspection**  
**no arp-inspection**

| parameter | description |
|-----------|-------------|
|           |             |

|           |  |   |
|-----------|--|---|
| Parameter | -  | - |
| Default   | arp inspection is disabled   |   |
| Mode      | Global Configuration   |   |
| Usage     | Use the <b>arp-inspection</b> command to enable Dynamic Arp Inspection function. Use the no form of this command to disable..  |   |
| Example   | <p>The example shows how to enable Dynamic Arp Inspection on VLAN 1. You can verify settings by the following <b>show arp-inspection</b> command.</p> <pre>SWITCH(config)# arp-inspection SWITCH# show arp-inspection Dynamic ARP Inspection    : enabled Enable on Vlans           : 1-4094</pre> |   |

## 14.2 arp inspection rate-limit

**arp-inspection rate-limit<1-50>**  
**no arp-inspection rate-limit**

| Parameter | parameter   | description                                    |
|-----------|---|--|
|           | <1-50>  | Set 1 to 50 PPS of DHCP packet rate limitation |
| Default   | default is un-limited of ARP packet   |  |
| Mode      | Interface configuration mode  |  |
| Usage     | Use the <b>arp-inspection rate-limit</b> command to set rate limitation on interface.The switch drop ARP packets after receives more than configured rate of packets per second.use the <b>no</b> form of this command to return to default settings. |  |

|         |  |
|---------|--|
| Example | <p>The example shows how to set rate limit to 30 pps on interface gig0/1.You can Verify settings by the following <b>show arp-inspection interface</b> command.</p> <pre>SWITCH(config)# interface GigabitEthernet 0/1</pre> |
|---------|--|

---

```

SWITCH(config-if-GigabitEthernet0/1)# arp-inspection rate-limit 30
SWITCH(config-if-GigabitEthernet0/1)# end          //Returns the privilege mode
SWITCH# show arp-inspection interfaces GigabitEthernet 0/1
Interfaces | Trust State | Rate (pps) | SMAC Check | DMAC Check | IP Check/Allow Zero |
-----+-----+-----+-----+-----+-----+
gi0/1   | Untrusted | 30      | disabled | disabled | disabled/disabled

```

## 14.3arp inspection trust

**arp-inspection trust**  
**no arp-inspection trust**

| Parameter | parameter | description |
|-----------|-----------|-------------|
|           | -         | -           |

Default ARP inspection trust is disabled

Mode interface configuration mode

Usage Use the **arp-inspection trust** command to set trusted interface. The switch Does not check ARP packets that are received on the trusted interface; it simply forwards it. Use the **no arp-inspection trust** form of this command to set untrusted interface.

The example shows how to set interface gig0/1 to trust. You can Verify settings by the following **show arp-inspection interface** command.

```

SWITCH(config)# interface GigabitEthernet 0/1
SWITCH(config-if-GigabitEthernet0/1)# arp-inspection trust
SWITCH(config-if-GigabitEthernet0/1)# do show arp-inspection interfaces
                                         GigabitEthernet 0/1

```

```

Interfaces | Trust State | Rate (pps) | SMAC Check | DMAC Check | IP Check/Allow Zero |
-----+-----+-----+-----+-----+-----+
gi0/1   | Trusted    | None      | disabled | disabled | disabled/disabled

```

## 14.4arp inspection validate

```
arp-inspection validate{[src-mac|dst-mac|ip[allow-zeros]]}
no arp-inspection validate{[src-mac|dst-mac|ip[allow-zeros]]}
```

| Parameter | parameter   | description  |
|-----------|-------------|--|
|           | src-mac     | The "src-mac" drop ARP requests and reply packets that arp-sender-mac and ethernet-source-mac is not Match.  |
|           | dst-mac     | The "dst-mac" drops ARP reply packets that arp-target-mac and ethernet-dest-mac is not match.  |
|           | ip          | The "ip" drop ARP request and reply packets that Sender-ip is invalid such as broadcast, multicast, all zero IP address and drop ARP reply packets that Target-ip is invalid |
|           | allow-zeros | The "allow-zeros" means won't drop all zero IP address.  |

Default default is disabled of all validation

Mode interface configuration mode

Usage Use the **arp-inspection validate** command to enable validate function on interface.  
Use the **no arp-inspection validate** form of this command to disable validation.

The example shows how to set interface gi1 to validate "src-mac"、"dst-mac" and "ip allow zeros". You can verify settings by the following show ip arp inspection interface command

```
SWITCH(config)# interface GigabitEthernet 0/1
```

```
SWITCH(config-if-GigabitEthernet0/1)# arp-inspection validate src-mac
```

```
SWITCH(config-if-GigabitEthernet0/1)# arp-inspection validate dst-mac
```

```
SWITCH(config-if-GigabitEthernet0/1)# arp-inspection validate ip allow-zeros
```

```
SWITCH(config-if-GigabitEthernet0/1)# do show arp-inspection interfaces
```

```
GigabitEthernet 0/1
```

```
Interfaces | Trust State | Rate (pps) | SMAC Check | DMAC Check | IP Check/Allow Zero |
```

|       |           |      |         |         |                 |
|-------|-----------|------|---------|---------|-----------------|
| gi0/1 | Untrusted | None | enabled | enabled | enabled/enabled |
|-------|-----------|------|---------|---------|-----------------|

## 14.5clear arp inspection statistics

```
clear arp-inspection interfaces {port-id} statistics
```

| Parameter | parameter | description                         |
|-----------|-----------|-------------------------------------|
|           | port-id   | Specifies ports to clear statistics |

Default Null

---

|         |  |
|---------|--|
| Mode    | privilege mode   |
| Usage   | Use the <b>clear arp-inspection interfaces {port-id} statistics</b> command to clear statistics that are recorded on interface.  |
| Example | <p>The example shows how to clear statistics on interface gig0/1. You can verify settings by the following <b>show arp-inspection interface statistics</b> command.</p> <pre>SWITCH# clear arp-inspection interfaces GigabitEthernet 0/1 statistics SWITCH# show arp-inspection interfaces GigabitEthernet 0/1 statistics Port  Forward  Source MAC Failures Dest MAC Failures SIP Validation Failures  DIP Validation Failures IP-MAC Mismatch Failures -----+-----+-----+-----+ -----+-----+ gi0/1  0     0     0     0     0     0     0     0     0 -----+-----+-----+-----+</pre> |

## 14.6 show arp inspection

| show arp-inspection interfaces |  |             |
|--------------------------------|--|-------------|
| Parameter                      | parameter  | description |
|                                | -  | -           |
| Default                        | Null   |             |
| Mode                           | privilege mode   |             |
| Usage                          | Use the <b>show arp-inspection</b> command to show settings of ARP Inspection  |             |
| Example                        | <p>The example shows how to show settings of arp inspection</p> <pre>SWITCH# show arp-inspection Dynamic ARP Inspection : enabled Enable on Vlans : 1-4094</pre> |             |

## 14.7 show arp inspection interface

| show arp-inspection interfaces {port-id}           |           |                                    |
|--|-----------|------------------------------------|
| show arp-inspection interfaces {port-id}statistics |           |                                    |
| Parameter  | parameter | description                        |
|  | Port-id   | Specifies ports to show statistics |

---

|         |      |
|---------|------|
| Default | Null |
|---------|------|

|      |                |
|------|----------------|
| Mode | privilege mode |
|------|----------------|

|       |  |
|-------|--|
| Usage | Use the <b>show arp-inspection interfaces</b> command to show settings or statistics of interface. |
|-------|--|

|                                |   |                     |                   |                         |                     |            |                     |                                |                                |       |           |      |          |          |                   |                                |                                |      |         |                     |                   |                         |                         |                          |  |  |  |                                |                                |       |   |   |   |   |   |                                |                                |   |  |   |  |   |  |

## 15 Flow Control Command

### 15.1 Flow Control Configuration Command

#### 15.1.1 flowcontrol

Turn on port flow control  
**flowcontrol {[on|off]}**

| parameter | parameter  | description           |
|-----------|------------|-----------------------|
|           | <b>on</b>  | Turn on flow control  |
|           | <b>off</b> | Turn off flow control |

|         |                        |
|---------|------------------------|
| Default | Turn off flow control. |
|---------|------------------------|

|      |                              |
|------|------------------------------|
| Mode | Interface configuration mode |
|------|------------------------------|

---

|       |  |  |
|-------|--|--|
| Usage | Use this command to enable or disable port flow control. |  |
|-------|--|--|

|         |   |  |
|---------|---|--|
| Example | SWITCH(config-if-GigabitEthernet0/1)# <b>flowcontrol on</b> |  |
|---------|---|--|

| Command | command                   | description                       |
|---------|---------------------------|-----------------------------------|
|         | show interfaces {port-id} | View interface status information |

## 16 VLAN COMMANDS

### 16.1 Configure commands

#### 16.1.1 VLAN description

Configure the name of the VLAN. Use this command's no option to revert the setting to a default value.

**description** vlan-name  
**no description**

| Parameter | parameter | description          |
|-----------|-----------|----------------------|
|           | vlan-name | The name of the vlan |

|         |  |
|---------|--|
| Default | VLAN default name is : VLAN + VLAN ID,eg: VLAN 2 default name "VLAN0002" |
|---------|--|

|      |                         |
|------|-------------------------|
| Mode | VLAN Configuration mode |
|------|-------------------------|

|       |  |
|-------|--|
| Usage | Use <b>show vlan</b> to view the configure of vlan |
|-------|--|

|         |                        |
|---------|------------------------|
| Example | SWITCH(config)# vlan 3 |
|---------|------------------------|

---

```
SWITCH(config)# description nihao
```

| Command | command   | description                                     |
|---------|-----------|---|
|         | show vlan | Display VLAN member ports and other information |

## 16.1.2 vlan

Use command **vlan vlan-id** to enter configuration mode .Use the **no** option of the command to remove the existing VLAN.

**vlan vlan-id**  
**no vlan vlan-id**

| Parameter | parameter                 | description   |
|-----------|---------------------------|---|
|           | <i>vlan-id</i>            | VLAN ID number(1-4094).<br>Notice: The default VLAN (VLAN 1) cannot be delete.  |
| Default   | vlan 1                    |   |
| Mode      | Global configuration mode |   |
| Usage     |                           | If the input VLAN <i>vlan-id</i> does not exist, the system requirement creates VLAN and enters the <i>vlan</i> . Existence goes into VLAN. |
| Example   |                           | <pre>SWITCH(config)# vlan 5 SWITCH(config)# no vlan 5</pre>   |

| Command | command          | description                                      |
|---------|------------------|--|
|         | <b>show vlan</b> | Display VLAN member ports and other information. |

## 16.1.3 switch mode

Using this command specifies a two - layer interface (switch port)mode, which can be specified as access /trunk/hybrid port. Use the switch mode access option to revert the schema of the interface

---

to default values

### **switch mode [access | trunk | hybrid ]**

| Parameter | parameter | description                            |
|-----------|-----------|--|
|           | access    | Configure a switch port mode is access |
|           | trunk     | Configure a switch port mode is trunk  |
|           | hybrid    | Configure a switch port mode is hybrid |

|         |  |
|---------|--|
| Default | The switch port default mode is access |
|---------|--|

|      |                              |
|------|------------------------------|
| Mode | Interface configuration mode |
|------|------------------------------|

|       |  |
|-------|--|
| Usage | If a switch port mode is access, This port can only be a member of a VLAN. Use command: <b>switch access vlan</b> specifies which VLAN is the member of the interface. If a switch port mode trunk or hybrid and this port can be a member of multiple VLANs . This port Which VLAN the interface can belong to is determined by the licensing VLAN list of the interface, Trunk port or hybrid port are all VLAN members in the list of license VLAN . Use <b>switch {trunk   hybrid }</b> Command to define the licensing VLAN list of interfaces. |
|-------|--|

|         |  |
|---------|--|
| Example | configure the port1 mode is trunk:<br>SWITCH(config)# interface GigabitEthernet 0/1<br>SWITCH(config-if-GigabitEthernet0/1)# switch mode trunk |
|---------|--|

| Command | command          | description                               |
|---------|------------------|---|
|         | <b>show vlan</b> | Display configuration of vlan information |

## **16.1.4 Management VLAN**

Use command management-vlan *vlan-id* to enter configuration mode .Use the no option of the command to remove the create management-vlan.

**Management-vlan *vlan-id***  
**no management-vlan**

|           | parameter                 | description   |
|-----------|---------------------------|---|
| Parameter | <i>vlan-id</i>            | VLAN ID number(1-4094).   |
| Default   | management-vlan vlan 1    |   |
| Mode      | Global configuration mode |   |
| Usage     |                           | If the input VLAN <i>vlan-id</i> does not exist, the system requirement creates VLAN and enters the <i>vlan</i> . Existence goes into VLAN. |
| Example   |                           | <pre>SWITCH-SWITCH(config)# management-vlan vlan 4 SWITCH(config)# no management-vlan</pre>   |

---

| Command | command          | description                               |
|---------|------------------|---|
|         | <b>show vlan</b> | Display configuration of vlan information |

## 16.2 Configure different types of VLAN.

### 16.2.1 Access VLAN

In port mode, configure the access attribute of the port.

**switch access vlan *vlan-id***

| Parameter | parameter      | description             |
|-----------|----------------|-------------------------|
|           | <i>vlan-id</i> | Port to join VLAN's ID. |

**Default** port default mode is access, default VLAN is VLAN 1

**Command** Interface configuration mode

**Usage** Enter a VLAN ID.If the input is an VLAN ID that is not created,the device will Indicate that the VLAN does not exist. If the input is already existing VLAN ID, the VLAN member port is increased.

**Example** configure port 1 belong to vlan 2:  
SWITCH(config)# interface GigabitEthernet 0/1  
SWITCH(config-if-GigabitEthernet0/1)# switch access vlan 2

| Command | command          | description                               |
|---------|------------------|---|
|         | <b>show vlan</b> | Display configuration of vlan information |

### 16.2.2 Trunk allowed VLAN

Specify a native VLAN for a trunk port and a list of permissions to configure this Trunk port VLAN. Use the no option of this command to restore the trunk property of the interface to the

---

default value.

**switch trunk allowed vlan *vlan-id***  
**no switch trunk allowed vlan**

|           | parameter                            | description   |
|-----------|--------------------------------------|---|
| Parameter | <b>allowed vlan <i>vlan-list</i></b> | Configure the permission VLAN list for this Trunk port. The parameter <i>vlan-list</i> can be either a VLAN or a series of VLAN, beginning with a small VLAN ID and ending with a large VLAN ID, with the (-) symbolic connection in the middle. Such as: 10-20. Segments can be separated by symbols, such as: 1-10,20-25,30,33. The meaning of all is that the permission VLAN list contains all supported VLAN; the add indicates that the specified VLAN list is added to the license VLAN list; the remove indicates that the specified VLAN list is removed from the license VLAN list; |

Default Port default mode is access,default VLAN is VLAN 1.

Mode Interface configuration mode

Usage Enter a VLAN ID.If the input is an VLAN ID that is not created,the device will Indicate that the VLAN does not exist. If the input is already existing VLAN ID, the VLAN member port is increased.

Example configure port 1 belong to vlan 3:  
SWITCH(config)# interface GigabitEthernet 0/1  
SWITCH(config-if-GigabitEthernet0/1)# switch trunk allowed vlan 3

| Command | command          | description                               |
|---------|------------------|---|
|         | <b>show vlan</b> | Display configuration of vlan information |

---

### 16.2.3 Trunk native VLAN

Specify a native VLAN for a trunk port and a list of permissions to configure this Trunk port VLAN. Use the no option of this command to restore the trunk property of the interface to the default value.

**switch trunk native vlan *vlan-id***  
**no switch trunk native vlan**

| Parameter | parameter   | description  |
|-----------|-------------|--|
|           | native vlan | Trunk port message received, if the message with VLAN mark, then put this message to the corresponding VLAN tag, if the message with no VLAN mark, then the message is forwarded to the port of native VLAN. |

|         |  |
|---------|--|
| Default | default VLAN is VLAN 1   |
| Mode    | Interface configuration mode   |
| Usage   | To configure the Trunk native VLAN of a port, this port must be the trunk property.  |
| Example | configure gig0/1 belong to native vlan3<br>SWITCH(config)# interface gig 0/1<br>SWITCH(config-if-GigabitEthernet0/1)# switch trunk native vlan 3 |

| Command | command          | description                               |
|---------|------------------|---|
|         | <b>show vlan</b> | Display configuration of vlan information |

### 16.2.4 Hybrid VLAN

The permission VLAN list of Hybrid ports configured for a port. Use the no option of this command to restore the Hybrid property of the interface to the default value.

**switch hybrid vlan *vlan-id* [tagged | untagged]**  
**no switch hybrid vlan *vlan-id* [tagged | untagged]**

| Parameter | parameter | description                            |
|-----------|-----------|--|
|           | no        | Restore the hybrid default output rule |

Default untagged

Mode Interface configuration mode

Usage NULL

Example  
SWITCH(config)# interface GigabitEthernet 0/1  
SWITCH(config-if-GigabitEthernet0/1)# switch hybrid vlan 3 untagged

| Command | command          | description                               |
|---------|------------------|---|
|         | <b>show vlan</b> | Display configuration of vlan information |

## 16.2.5 Hybrid native VLAN

Specify a native VLAN for a hybrid port. Use the no option of this command to restore the Hybrid property of the interface to the default value.

**switch hybrid native vlan *vlan-id***  
**no switch hybrid native vlan**

| Parameter | parameter | description                 |
|-----------|-----------|-----------------------------|
|           | no        | Restore Hybrid default VLAN |

Default default native vlan is vlan 1

Mode Interface configuration mode

Usage To configure the Hybrid native VLAN of a port, this port must be the Hybrid property.

Example  
SWITCH(config)# interface GigabitEthernet 0/1  
SWITCH(config-if-GigabitEthernet0/1)# switch hybrid native vlan 3

| Command | command          | description                               |
|---------|------------------|---|
|         | <b>show vlan</b> | Display configuration of vlan information |

---

## 16.3 Display relevant commands

### 16.3.1 show vlan

Display VLAN member ports and other information.

**show vlan [id *vlan-id*]**

| Parameter | parameter      | description           |
|-----------|----------------|-----------------------|
|           | <i>vlan-id</i> | The number of VLAN ID |

|         |  |
|---------|--|
| Default | Show all information by default  |
| Mode    | Privileged mode  |
| Usage   | To return to privileged mode, enter the end command, or type the Ctrl+Z combination key.<br>To return to global configuration mode, enter the exit command |

|         |  |
|---------|--|
| Example | SWITCH# show vlan 3<br>VID   VLAN Name   Untagged Ports  <br>Tagged Ports   Type<br>-----+-----+-----+-----<br>-----+-----<br>3   VLAN0003   gi0/1  <br>---   Static |
|---------|--|

| Command | command                         | description                               |
|---------|---------------------------------|---|
|         | <b>show vlan <i>vlan-id</i></b> | Display configuration of vlan information |

## 17 Voice VLAN

### 17.1 Configure commands

---

## 17.1.1 voice VLAN

First create a VLAN, and voice VLAN to specify a VLAN has been created to enable the voice VLAN ID. Use the “no” command to close voice VLAN .Voice VLAN is disable by default.

```
voice-vlan vlan id  
voice-vlan  
no voice-vlan
```

| Parameter | parameter          | description  |
|-----------|--------------------|--|
|           | voice-vlan vlan id | The number of voice-vlan id Notice:The voice vlan ID can not be same as surveillance vlan ID |

Default  
NULL

Mode Global configuration mode

Usage Use **show voice-vlan** to view the configure of voice-vlan

Example  
SWITCH(config)# voice-vlan vlan 2  
SWITCH(config)# voice-vlan

| Command | command                | description  |
|---------|------------------------|--|
|         | <b>show voice-vlan</b> | View global configuration information for voice VLAN |

## 17.1.2 voice-vlan mode

Using this command specifies a two - layer interface (switch port)mode, which can be specified as autotag/autountag/manual for switch port . Use the voice-vlan mode autoTag option to revert the schema of the interface to default values.Notice:Ports can not configure voice-vlan on the access port!

**Voice-vlan mode [autoTag | autounTag | manual ]**

|           | description   |   |
|-----------|---|---|
| Parameter | autoTag<br>The voice VLAN mode for configuring ports is autoTag   |   |
|           | autounTag<br>The voice VLAN mode for configuring ports is autounTag   |   |
|           | manual<br>The voice VLAN mode for configuring ports is manual   |   |
| Default   | The voice-vlan default mode is autoTag  |   |
| Mode      | Interface configuration mode  |   |
| Usage     | If the port set voice VLAN mode is autoTag, the port is automatically joined with voice VLAN, with tag. If the mode is autounTag, the port is automatically added to the voice VLAN without tag. Note: when adding the voice VLAN mode to manually join the port, you need to forward the port to the voice VLAN in advance |   |
| Example   | Configure port 1 to join voice VLAN as autotag<br>SWITCH(config)# interface GigabitEthernet 0/1<br>SWITCH(config-if-GigabitEthernet0/1)# voice-vlan mode autoTag  |   |
| Command   | command   | description                                     |
|           | <b>show voice-vlan</b>  | Display configuration of voice-vlan information |

### 17.1.3 voice VLAN OUI

In global configuration mode, set OUI-table and note that the MAC address cannot be multicast and broadcast addresses. Mask cannot enter zero before F.

```
SWITCH(config)# voice-vlan oui-table A:B:C:D:E:F mask
A:B:C:D:E:F
```

|           | parameter                                     | description  |
|-----------|---|--|
| Parameter | voice-vlan oui-table                          | Match the filter's source MAC address for the incoming message |
|           |   |  |
|           |   |  |
| Default   | The voice-vlan oui-table defaults to 8 rules. |  |
| Mode      | Global configuration mode                     |  |

---

|         |  |
|---------|--|
| Usage   | In global settings, oui-table adds the port to the voice VLAN when the port's source MAC address matches the address in the oui list |
| Example | Configure voice VLAN OUI<br>SWITCH(config)# voice-vlan oui-table 02:00:12:32:56:89 mask FF:FF:FF:FF:FF:00                            |

| Command | command   | description   |
|---------|---|---|
|         | <b>show voice-vlan interfaces GigabitEthernet 0/1</b> | Display configuration of voice-vlan oui-table information |

## 17.1.4 voice VLAN aging-time and cos

In global configuration mode, set voice VLAN aging-time (1-65535)and cos (0-7).

**SWITCH(config)# voice-vlan aging-time X(1-65535)**  
**SWITCH(config)# voice-vlan cos X(0-7) remark**

| Parameter | parameter  | description  |
|-----------|------------|--|
|           | Aging-time | Specifies the aging time of the port in voice VLAN |
|           | cos        | Specify the voice VLAN Class Of Service            |

|         |   |
|---------|---|
| Default | The default aging-time is 720 minutes<br>The default cos value is 5   |
| Mode    | Global configuration mode   |
| Usage   | The aging time and the cos value refer to the survival time and the priority of the voice message after the port is added to the voice VLAN             |
| Example | Configure voice VLAN aging-time is 30 minutes and cos value is 7<br>SWITCH(config)# voice-vlan aging-time 30<br>SWITCH(config)# voice-vlan cos 7 remark |

| Command | command                | description  |
|---------|------------------------|--|
|         | <b>show voice-vlan</b> | Display configuration of voice-vlan aging-time and cos information |

## 17.2 Display relevant commands

### 17.2.1 show voice VLAN

---

Display VLAN member ports and other information.

**Show vlan id**  
**Show voice-vlan device**

| Parameter | parameter                | description   |
|-----------|--------------------------|---|
|           | <i>Vlan-id</i>           | The number of voice VLAN ID   |
|           | <i>Voice-vlan device</i> | The ports in voice VLAN   |
| Default   |                          | Show voice-vlan global information by default<br>Show the ports in voice vlan by default  |
| Mode      |                          | Privileged mode   |
| Usage     |                          | To return to privileged mode, enter the end command, or type the Ctrl+Z combination key.<br>To return to global configuration mode, enter the exit command  |
| Example   |                          | <pre>SWITCH# show voice-vlan device Interface   MAC Address   start-time -----+-----+----- gi0/1   00E0.BB00.0000   2000-01-01 00:24:03 SWITCH# show vlan 2 VID   VLAN Name   Untagged Ports   Tagged Ports   Type -----+-----+-----+-----+ 2   VLAN0002   ---   gi0/1   Static</pre> |

| Command | command                         | description                                      |
|---------|---------------------------------|--|
|         | <b>show vlan <i>vlan-id</i></b> | Display configuration of voice-vlan information  |
|         | <b>Show voice-vlan device</b>   | Display the information of ports join voice-vlan |

## 18 Surveillance VLAN

### 18.1 Configure commands

#### 18.1.1 surveillance VLAN

First create a VLAN, and surveillance VLAN to specify a VLAN has been created to enable the surveillance VLAN ID. Use the “no” command to close surveillance VLAN .surveillance VLAN is disable by default.

**surveillance-vlan vlan id**

---

**surveillance-vlan**  
**no surveillance-vlan**

| Parameter | parameter                 | description  |
|-----------|---------------------------|--|
|           | surveillance-vlan vlan id | The number of surveillance-vlan id .Notice:The surveillance vlan ID can not be same as voice vlan ID |

|         |      |
|---------|------|
| Default | NULL |
|---------|------|

|      |                           |
|------|---------------------------|
| Mode | Global configuration mode |
|------|---------------------------|

|       |  |
|-------|--|
| Usage | Use <b>show surveillance-vlan</b> to view the configure of surveillance-vlan |
|-------|--|

|         |   |
|---------|---|
| Example | SWITCH(config)# surveillance-vlan vlan 3<br>SWITCH(config)# surveillance-vlan |
|---------|---|

| Command | command                       | description   |
|---------|-------------------------------|---|
|         | <b>show surveillance-vlan</b> | View global configuration information for surveillance VLAN |

## 18.1.2 surveillance-vlan mode

Using this command specifies a two - layer interface (switch port)mode, which can be specified as auto/manual for switch port . Use the surveillance-vlan mode auto option to revert the schema of the interface to default values.Ports can not configure surveillance-vlan on the access port!

**surveillance-vlan mode [auto] manual ]**

| Parameter | parameter | description   |
|-----------|-----------|---|
|           | auto      | The surveillance VLAN mode for configuring ports is autoTag |
|           | manual    | The surveillance VLAN mode for configuring ports is manual  |

|         |   |
|---------|---|
| Default | The surveillance-vlan default mode is auto. |
|---------|---|

---

| Mode   | Interface configuration mode  |         |             |  |   |
|--|---|---------|-------------|--|---|
| Usage  | If the port set surveillance VLAN mode is auto, the port is automatically joined with surveillance VLAN,.Note: when adding the surveillance VLAN mode to manually join the port, you need to forward the port to the surveillance VLAN in advance.            |         |             |  |   |
| Example  | Configure port 1 to join surveillance VLAN as auto<br>SWITCH(config)# interface GigabitEthernet 0/1<br>SWITCH(config-if-GigabitEthernet0/1)# surveillance-vlan mode auto  |         |             |  |   |
| Command  | <table border="1"> <thead> <tr> <th>command</th><th>description</th></tr> </thead> <tbody> <tr> <td><b>show surveillance-vlan interfaces</b><br/><b>GigabitEthernet 0/1</b></td><td>View configuration information for voice VLAN</td></tr> </tbody> </table> | command | description | <b>show surveillance-vlan interfaces</b><br><b>GigabitEthernet 0/1</b> | View configuration information for voice VLAN |
| command  | description   |         |             |  |   |
| <b>show surveillance-vlan interfaces</b><br><b>GigabitEthernet 0/1</b> | View configuration information for voice VLAN   |         |             |  |   |

### 18.1.3 surveillance VLAN OUI

In global configuration mode, set OUI-table and note that the MAC address cannot be multicast and broadcast addresses. Mask cannot enter zero before F.

```
SWITCH(config)# surveillance-vlan oui-table A:B:C:D:E:F
mask A:B:C:D:E:F
```

| Parameter                   | <table border="1"> <thead> <tr> <th>parameter</th><th>description</th></tr> </thead> <tbody> <tr> <td>surveillance-vlan oui-table</td><td>Match the filter's source MAC address for the incoming message</td></tr> </tbody> </table> | parameter | description | surveillance-vlan oui-table | Match the filter's source MAC address for the incoming message |
|-----------------------------|--|-----------|-------------|-----------------------------|--|
| parameter                   | description  |           |             |                             |  |
| surveillance-vlan oui-table | Match the filter's source MAC address for the incoming message   |           |             |                             |  |
| Default                     | NULL   |           |             |                             |  |
| Mode                        | Global configuration mode  |           |             |                             |  |
| Usage                       | In global settings, oui-table adds the port to the surveillance VLAN when the port's source MAC address matches the address in the oui list  |           |             |                             |  |
| Example                     | Configure voice VLAN OUI<br>SWITCH(config)# surveillance-vlan oui-table 04:10:12:32:56:89 mask   |           |             |                             |  |

---

FF:FF:FF:FF:FF:00 componentType video\_encoder

| Command | command                       | description  |
|---------|-------------------------------|--|
|         | <b>Show surveillance-vlan</b> | Display configuration of surveillance-vlan oui-table information |

## 18.1.4 surveillance VLAN aging-time and cos

In global configuration mode, set surveillance VLAN aging-time (1-65535)and cos (0-7).

```
SWITCH(config)# surveillance-vlan aging-time X(1-65535)
SWITCH(config)# surveillance--vlan cos X(0-7) remark
```

| Parameter | parameter  | description   |
|-----------|------------|---|
|           | Aging-time | Specifies the aging time of the port in surveillance VLAN |
|           | cos        | Specify the surveillance VLAN Class Of Service            |

|         |  |
|---------|--|
| Default | The default aging-time is 720 minutes<br>The default cos value is 5  |
| Mode    | Global configuration mode  |
| Usage   | The aging time and the cos value refer to the survival time and the priority of the surveillance message after the port is added to the voice VLAN                           |
| Example | Configure surveillance VLAN aging-time is 20 minutes and cos value is 7<br>SWITCH(config)# surveillance-vlan aging-time 20<br>SWITCH(config)# surveillance-vlan cos 7 remark |

| Command | command                       | description   |
|---------|-------------------------------|---|
|         | <b>show surveillance-vlan</b> | Display configuration of surveillance-vlan aging-time and cos information |

## 18.2 Display relevant commands

### 18.2.1 show surveillance VLAN

Display VLAN member ports and other information.

---

## Show vlan id

### Show surveillance-vlan device

| Parameter | parameter  | description                        |
|-----------|--|------------------------------------|
|           | <i>Vlan-id</i>   | The number of surveillance VLAN ID |
|           | <i>surveillance-vlan device</i>  | The ports in surveillance VLAN     |
| Default   | Show surveillance-vlan global information by default<br>Show the ports in surveillance vlan by default   |                                    |
| Mode      | Privileged mode  |                                    |
| Usage     | To return to privileged mode, enter the end command, or type the Ctrl+Z combination key.<br>To return to global configuration mode, enter the exit command   |                                    |
| Example   | <pre>SWITCH# show surveillance-vlan device Interface   Component Type   Description             MAC Address   start-time -----+-----+-----+        -----+-----+ gi0/1   Other IP Surveillance Device   0410.1232.5689   2000-01-01 17:31:03 SWITCH# show vlan 3 VID   VLAN Name   Untagged Ports          Tagged Ports   Type -----+-----+-----+ 3   VLAN0003   ---   gi0/1   Static</pre> |                                    |

| Command | command                              | description   |
|---------|--------------------------------------|---|
|         | <b>show vlan <i>vlan-id</i></b>      | Display configuration of surveillance-vlan information  |
|         | <b>Show surveillance-vlan device</b> | Display the information of ports join surveillance-vlan |

---

# 19 DHCP-snooping

## 19.1 Configure commands

### 19.1.1 DHCP-Snooping

Enable DHCP-Snooping, If a port is a non trusted port, then the port discards the service message (DHCP\_OFFER、DHCP\_ACK、DHCP\_NCK) ,If a port is a trusted port, then the port can forward the service message normally.

**dhcp-snooping**  
**no dhcp-snooping**

| Parameter | parameter        | description           |
|-----------|------------------|-----------------------|
|           | dhcp-snooping    | Enable dhcp-snooping  |
|           | no dhcp-snooping | Disable dhcp-snooping |

|         |         |
|---------|---------|
| Default | disable |
|---------|---------|

|      |                           |
|------|---------------------------|
| Mode | Global configuration mode |
|------|---------------------------|

|       |   |
|-------|---|
| Usage | In the global configuration mode, after opening the DHCP-snooping function, you can effectively prevent illegal servers from being established. |
|-------|---|

|         |                               |
|---------|-------------------------------|
| Example | SWITCH(config)# dhcp-snooping |
|---------|-------------------------------|

| Command | command                   | description                        |
|---------|---------------------------|------------------------------------|
|         | <b>show dhcp-snooping</b> | Displays the current configuration |

### 19.1.2 DHCP-Snooping trust

Open the DHCP-Snooping trust function, if a port is a non trusted port, then the port service message received will be discarded if a port to port the port trust can normal forwarding service

---

Message.

**dhcp-snooping trust**  
**no dhcp-snooping trust**

| Parameter | parameter              | description                                 |
|-----------|------------------------|---|
|           | dhcp-snooping trust    | Configure the port is dhcp-snooping trust   |
|           | no dhcp-snooping trust | Configure the port is dhcp-snooping untrust |

Default      untrust

Mode      Interface configuration mode

Usage      In port mode, when the port is opened, the port can forward the service message. If this port is a non trusted port, then the port cannot forward the service message.

Example      SWITCH(config-if-GigabitEthernet0/2)# dhcp-snooping trust

| Command | command                   | description                        |
|---------|---------------------------|------------------------------------|
|         | <b>show dhcp-snooping</b> | Displays the current configuration |

### 19.1.3 dhcp snooping for vlan

Enable DHCP snooping information 82 for VLAN

| Parameter | Parameter                 | description                   |
|-----------|---------------------------|-------------------------------|
|           | <b>dhcp snooping vlan</b> | Enable the dhcp snooping vlan |

Default

Mode      global configuration mode

Usage      there be DHCP snooping information 82 for VLANs enabled

Example

```
SWITCH-10T(config) # dhcp-snooping vlan 1-4094
```

Command

|         | command                   | description                       |
|---------|---------------------------|-----------------------------------|
| Command | <b>show dhcp-snooping</b> | Display dhcp snooping information |
|         | command                   | description                       |

### 19.1.3 enable dhcp snooping option 82

Enable DHCP snooping information 82

Parameter

|  | Parameter                   | description                     |
|--|-----------------------------|---------------------------------|
|  | <b>dhcp-snooping option</b> | Enable the dhcp snooping option |

Default

disable

Mode

interface configuration mode

Usage

there be DHCP snooping information 82 enabled

Example

```
SWITCH-10T(config-if-GigabitEthernet0/1) # dhcp-snooping option
```

|                 |                                    |                                   |
|-----------------|------------------------------------|-----------------------------------|
| Command<br><br> | <b>show dhcp-snooping</b><br><hr/> | Display dhcp snooping information |
|-----------------|------------------------------------|-----------------------------------|

### 19.1.4 option 82 of remote-ID

configure DHCP snooping information 82 of remote-ID

| Parameter | Parameter     | description      |
|-----------|---------------|------------------|
|           | <b>STRING</b> | ID string (1~63) |

|         |                   |
|---------|-------------------|
| Default | DUT's mac address |
|---------|-------------------|

|      |                           |
|------|---------------------------|
| Mode | global configuration mode |
|------|---------------------------|

|       |  |
|-------|--|
| Usage | a "remote ID" containing the switch's information as a trusted identifier for the remote high-speed modem. |
|-------|--|

#### Example

```
SWITCH-10T(config)# dhcp-snooping option remote-id 192.168.100.145
```

| Command | command                   | description                       |
|---------|---------------------------|-----------------------------------|
|         | <b>show dhcp-snooping</b> | Display dhcp snooping information |

---

## 19.1.5 option 82 of CID

configure DHCP snooping information 82 of circuit-ID

| Parameter | Parameter     | description      |
|-----------|---------------|------------------|
|           | <b>STRING</b> | ID string (1~63) |

Default

Mode interface configuration mode

Usage It indicates that the received DHCP request message is from the link identifier

Example

```
SWITCH-10T(config-if-GigabitEthernet0/1)# dhcp-snooping  
option circuit-id 192.168.100.145
```

| Command | command  | description                                 |
|---------|--|---|
|         | show dhcp-snooping interfaces<br>GigabitEthernet 0/1 | Display dhcp snooping of cid<br>information |

## 19.1.6 DHCP snooping policy

configure global DHCP snooping policy

---

## dhcp-snooping option action (drop|keep|replace)

| Parameter | Parameter      | description                                |
|-----------|----------------|--|
|           | <b>drop</b>    | Drop packets with option82                 |
|           | <b>keep</b>    | Keep original option82                     |
|           | <b>replace</b> | Replace option82 content by switch setting |

**Default** The global DHCP relay policy shall be drop

**Mode** global configuration mode

**Usage** DHCP snooping information 82 policy

**Example**

```
SWITCH-10T(config-if-GigabitEthernet0/1)# dhcp-snooping option  
action drop
```

**Command**

| command  | description                          |
|--|--------------------------------------|
| show dhcp-snooping interfaces<br>GigabitEthernet 0/5 | Display dhcp snooping<br>information |

## 19.2 Display relevant commands

### 19.2.1 show DHCP-Snooping

Displays the current DHCP-Snooping open, shutdown, and configuration information.

**show DHCP-Snooping**

**Show DHCP-Snooping interface gigabitEthernet 0/x**

| Parameter | command   | description  |
|-----------|---|--|
|           | <b>show dhcp-snooping</b>   | Displays the current DHCP-Snooping configuration information                   |
|           | <b>show dhcp-snooping interfacegigabitEthernet 0/x</b>  | Displays the current DHCP-Snooping configuration on port or Aggregateport(1-8) |
| Default   | NULL  |  |
| Mode      | Privileged mode   |  |
| Usage     | view the current DHCP-snooping information  |  |
| Example   | <pre>SWITCH# show dhcp-snooping  DHCP Snooping      : enabled Enable on following Vlans : 1-4094 circuit-id default format : vlan-port remote-id          : 00:e0:4c:00:00:00 (Switch Mac in Byte Order)  SWITCH# show dhcp-snooping interfaces GigabitEthernet 0/1 Interfaces   Trust State   Rate (pps)   hwaddr Check   Insert Option82   -----+-----+-----+-----+ gi0/1     Untrusted   None      disabled    disabled     </pre> |  |

| Command | parameter  | description  |
|---------|--|--|
|         | <b>show dhcp-snooping</b>                              | Displays the current DHCP-Snooping configuration information                   |
|         | <b>show dhcp-snooping interfacegigabitEthernet 0/x</b> | Displays the current DHCP-Snooping configuration on port or Aggregateport(1-8) |

# 20 Loopback-detection

## 20.1 Configure commands

### 20.1.1 Loopback-detection

Configure loop detection, activate this function, and when loop appears on the network, the loop port is directly link-down or issued a warning.

**Loopback-detection [enable|ctp-interval|resume-interval|snmp-trap]**

| Parameter | parameter       | description  |
|-----------|-----------------|--|
|           | enable          | enable loop detection function defaults is disable   |
|           | ctp-interval    | ctp sending interval(1-32767)  |
|           | resume-interval | Port automatic recovery time interval(0,60-1000000)<br>default '60'.set '0' means no auto-resume |
|           | snmp-trap       | Decide whether to send an alarm message, You need to start the SNMP function and SNMP trap first |

|         |      |
|---------|------|
| Default | NULL |
|---------|------|

|      |                           |
|------|---------------------------|
| Mode | Global configuration mode |
|------|---------------------------|

|       |  |
|-------|--|
| Usage | In the global mode, configuration loopback-detection |
|-------|--|

|         |   |
|---------|---|
| Example | Configure the loopback-detection enable,ctp-interval,resume-interval ,resume-interval ,snmp-trap<br>SWITCH(config)# loopback-detection enable<br>SWITCH(config)# loopback-detection ctp-interval 1<br>SWITCH(config)# loopback-detection resume-interval 60<br>SWITCH(config)# loopback-detection snmp-trap |
|---------|---|

| Command | command                        | description   |
|---------|--------------------------------|---|
|         | <b>show loopback-detection</b> | View the current loop detection status and configuration information. |

---

## 20.2 Display relevant commands

### 20.2.1 show loop-detection

Use the following command to see loop detection information

**show loopback-detection**

| Parameter | parameter               | description  |
|-----------|-------------------------|--|
|           | show loopback-detection | View the current port loop detection status and configuration information. |

|         |   |
|---------|---|
| Default | NULL  |
| Mode    | Privileged mode   |
| Usage   | In privileged mode, view configuration status information. Do not select parameters, display all. |

Check loop-detection port configuration and status  
SWITCH# show loopback-detection

Loopback detection configuration  
Loopback detection : enabled  
CTP tx interval : 10  
Port resume interval : 60  
Loopback detection trap: enabled

Example

| Interfaces | State   | Result        |  |
|------------|---------|---------------|--|
| gi0/1      | enabled | NORMAL        |  |
| gi0/2      | enabled | NORMAL        |  |
| gi0/3      | enabled | NORMAL        |  |
| gi0/4      | enabled | NORMAL        |  |
| gi0/5      | enabled | NORMAL        |  |
| gi0/6      | enabled | LOOP-SHUTDOWN |  |
| gi0/7      | enabled | NORMAL        |  |
| gi0/8      | enabled | NORMAL        |  |
| gi0/9      | enabled | NORMAL        |  |
| gi0/10     | enabled | NORMAL        |  |
| agg1       | enabled | LOOP-SHUTDOWN |  |

| Command | command                        | description  |
|---------|--------------------------------|--|
|         | <b>show loopback-detection</b> | View the current port loop detection status and configuration information. |

---

# 21 Spanning-tree

## 21.1 Configure Commands

### 21.1.1 spanning-tree enable

Enable spanning-tree function, that is to avoid the loop, enable spanning tree function switch will block loop port according to the port role.

**spanning-tree enable**

**No spanning-tree enable**

|           | parameter | description                                  |
|-----------|-----------|--|
| Parameter | enable    | Enable spanning-tree, the default is disable |
|           | no        | Disable spanning-tree                        |

Default disable

Mode Global configuration mode

Usage In the global mode, configuration spanning-tree

Example Configuring the spanning tree to turn on and off.  
SWITCH(config)# spanning-tree enable  
SWITCH(config)# no spanning-tree enable

|         | command                   | description  |
|---------|---------------------------|--|
| Command | <b>show spanning-tree</b> | View the current spanning tree status and configuration information. |

---

## 21.1.2 spanning-tree mode

Configure spanning-tree mode, there are three versions:stp、rstp、mstp

### spanning-tree mode [rstp|stp|mstp]

| Parameter | parameter | description               |
|-----------|-----------|---------------------------|
|           | stp       | Running the stp protocol  |
|           | rstp      | Running the rstp protocol |
|           | mstp      | Running the mstp protocol |

| Default | rstp  |  |
|---------|---|--|
| Mode    | Global configuration mode   |  |
| Usage   | Set the spanning tree protocol version of the switch running in global mode                       |  |
| Example | Set the protocol version of the switch running to RSTP<br>SWITCH(config)# spanning-tree mode rstp |  |
| Command | command   | description  |
|         | <b>show spanning-tree</b>   | View the current spanning tree status and configuration information. |

## 21.1.3 spanning-tree forward-time

Configure spanning-tree forward-time, default 15s.

### spanning-tree forward-time [4-30s]

| Parameter | parameter    | description  |
|-----------|--------------|--|
|           | forward-time | Forwarding delay, the time interval in which a port switches from one state to another |

|         |                           |
|---------|---------------------------|
| Default | 15                        |
| Mode    | Global configuration mode |

---

| Usage                     | Configuring forwarding delay in global mode  |         |             |                           |  |
|---------------------------|--|---------|-------------|---------------------------|--|
| Example                   | Configuring spanning-tree forwarding delay<br>SWITCH(config)# spanning-tree forward-time 17  |         |             |                           |  |
| <hr/>                     |  |         |             |                           |  |
| Command                   | <table border="1"> <thead> <tr> <th>command</th><th>description</th></tr> </thead> <tbody> <tr> <td><b>show spanning-tree</b></td><td>View the current spanning tree status and configuration information.</td></tr> </tbody> </table> | command | description | <b>show spanning-tree</b> | View the current spanning tree status and configuration information. |
| command                   | description  |         |             |                           |  |
| <b>show spanning-tree</b> | View the current spanning tree status and configuration information.   |         |             |                           |  |

## 21.1.4 spanning-tree hello-time

Configure the spanning tree to send BPDU messages to neighboring devices at intervals, that is, the transmission frequency of BPDU.

### spanning-tree hello-time [1-10s]

| Parameter  | <table border="1"> <thead> <tr> <th>parameter</th><th>description</th></tr> </thead> <tbody> <tr> <td>hello-time</td><td>This command is used to set the time interval for the switch to send BPDU to neighboring devices</td></tr> </tbody> </table> | parameter | description | hello-time | This command is used to set the time interval for the switch to send BPDU to neighboring devices |
|------------|---|-----------|-------------|------------|--|
| parameter  | description   |           |             |            |  |
| hello-time | This command is used to set the time interval for the switch to send BPDU to neighboring devices  |           |             |            |  |

|         |  |
|---------|--|
| Default | 2  |
| Mode    | Global configuration mode  |
| Usage   | Set the transmit frequency of the BPDU in the switch in global mode.                                   |
| Example | Configuring the spanning tree BPDU transmission interval<br>SWITCH(config)# spanning-tree hello-time 5 |

| Command                   | <table border="1"> <thead> <tr> <th>command</th><th>description</th></tr> </thead> <tbody> <tr> <td><b>show spanning-tree</b></td><td>View the current spanning tree status and configuration information.</td></tr> </tbody> </table> | command | description | <b>show spanning-tree</b> | View the current spanning tree status and configuration information. |
|---------------------------|--|---------|-------------|---------------------------|--|
| command                   | description  |         |             |                           |  |
| <b>show spanning-tree</b> | View the current spanning tree status and configuration information.   |         |             |                           |  |

## 21.1.5 spanning-tree max-age

---

Configure port BPDU aging time. Exchange the opportunity to maintain a timer aging, every time after receipt of BPDU from the new timing, when participating in compute a spanning tree port (root port and port blocking) in a max-age BPDU message is not received after a timeout, the switch will recalculate the topology.

### **spanning-tree max-age [6-40s]**

|           | parameter | description   |
|-----------|-----------|---|
| Parameter | max-age   | This command is used to set the switch BPDU timeout time, default 20s |

Default 20

Mode Global configuration mode

Usage Set the BPDU timeout time of the switch in global mode

Example Set the BPDU timeout of the switch to 30 seconds  
SWITCH(config)# spanning-tree max-age 30

|         | command                   | description   |
|---------|---------------------------|---|
| Command | <b>show spanning-tree</b> | View the current spanning tree status and configuration information |

## **21.1.6 spanning-tree max-hops**

The maximum BPDU hops of the switch-port, BPDU, is reduced by 1 per passing device. If the switch receives a hops value of 0, the BPDU message will be discarded, and the switch will control the spanning tree size by that value.

### **spanning-tree max-hops [1-40]**

|           | parameter | description  |
|-----------|-----------|--|
| Parameter | max-hops  | This command is used to set the maximum hop count of the switch BPDU, thus controlling the size of the spanning tree by default 20 times |

|         |  |
|---------|--|
| Default | 20   |
| Mode    | Global configuration mode  |
| Usage   | Sets the maximum hops count of the switch BPDU in global mode.                           |
| Example | Set the BPDU maximum hops count to 30 times<br>SWITCH(config)# spanning-tree max-hops 30 |

| Command | command                   | description   |
|---------|---------------------------|---|
|         | <b>show spanning-tree</b> | View the current spanning tree status and configuration information |

## 21.1.7 spanning-tree pathcost method

By default, the port automatically calculates path consumption based on port rate and specifies the criteria used when calculating path consumption. There are two calculation criteria: **dot1D-1998** and **dot1T-2001**.

### spanning-tree pathcost method [dot1D-1998|dot1T-2001]

| Parameter | parameter  | description   |
|-----------|------------|---|
|           | dot1D-1998 | Using the dot1D-1998 port path consumption calculation criteria |
|           | dot1T-2001 | Using the dot1T-2001 port path consumption calculation criteria |

|         |  |
|---------|--|
| Default | dot1T-2001   |
| Mode    | Global configuration mode  |
| Usage   | In global mode, set the calculation method of switch port path consumption value   |
| Example | Configure the port consumption value is calculated as dot1D-1998<br>SWITCH(config)# spanning-tree pathcost method dot1D-1998 |

| Command | command                   | description   |
|---------|---------------------------|---|
|         | <b>show spanning-tree</b> | View the current spanning tree status and configuration information |

---

## 21.1.8 spanning-tree priority

The bridge priority setting spanning-tree , select one of the highest priority switches as the root bridge

### **spanning-tree priority [0-61440]**

|           | parameter          | description   |
|-----------|--------------------|---|
| Parameter | priority [0-61440] | Configure the bridge priority of the switch, range 0-61440, and must be a multiple of 4096. default 32768 |

|         |       |
|---------|-------|
| Default | 32768 |
|---------|-------|

|      |                           |
|------|---------------------------|
| Mode | Global configuration mode |
|------|---------------------------|

|       |   |
|-------|---|
| Usage | Set switch bridge priority in global mode |
|-------|---|

|         |   |
|---------|---|
| Example | Set the switch bridge priority to 4096<br>SWITCH(config)# spanning-tree priority 4096 |
|---------|---|

|         | command                   | description   |
|---------|---------------------------|---|
| Command | <b>show spanning-tree</b> | View the current spanning tree status and configuration information |

## 21.1.9 spanning-tree mst configure

Configure the mstp parameters

**spanning-tree mst configuration[cr|instance|name|revision|no]}**  
**spanning-tree mst instance (0-15) priority (0-61440)**

| command | description |
|---------|-------------|
|---------|-------------|

|           |   |   |
|-----------|---|---|
| Parameter | spanning-tree mst configure                         | Enter the MSTP configuration mode<br>Note that "cr" means no arguments    |
|           | Instance (1-15) vlan (1-4094)                       | Configure the mapping relationship between the MSTP instance and the VLAN |
|           | name  | Configuration Bridge name (Max.32 character)                              |
|           | revision  | Mstp revision level (0-65535)   |
|           | No instance x                                       | Delete the exit instance  |
|           | No name   | Delete the instance name  |
|           | No revision   | Delete the revision   |
|           | Spanning-tree mst instance (1-15) priority(0-61440) | Configure the mstp instance priority,it must multiples of 4096            |

| Default                                     | NULL  |         |             |   |  |
|---|---|---------|-------------|---|--|
| Mode  | Global configuration mode   |         |             |   |  |
| Usage                                       | Set mstp information,if create a same as other devices region,you should ensure that the MSTP version, name, instance mapping relationship of the 2 devices are the same.   |         |             |   |  |
| Example                                     | <p>Set the switch mst instance is 5,name is nihao,revision is 33 and configure the instance 5 priority is 4096</p> <pre>SWITCH(config)# spanning-tree mst configuration SWITCH(config-mst)# instance 5 vlan 5 SWITCH(config-mst)# name nihao SWITCH(config-mst)# revision 33 SWITCH(config)# spanning-tree mst instance 5 priority 4096</pre> |         |             |   |  |
| Command                                     | <table border="1"> <thead> <tr> <th>command</th><th>description</th></tr> </thead> <tbody> <tr> <td><b>show spanning-tree mst configuration</b></td><td>View the current spanning-tree mstp status and configuration information</td></tr> </tbody> </table>  | command | description | <b>show spanning-tree mst configuration</b> | View the current spanning-tree mstp status and configuration information |
| command                                     | description   |         |             |   |  |
| <b>show spanning-tree mst configuration</b> | View the current spanning-tree mstp status and configuration information  |         |             |   |  |

## 21.1.10 spanning-tree enable

[no] Enable spanning-tree on switch-port

**spanning-tree [enable]**  
**no spanning-tree enable**

|           |           |  |
|-----------|-----------|--|
| Parameter | parameter | description  |
|           | enable    | Enabled port spanning tree function, the default all ports open the spanning tree function |

---

| Default   | NULL   |         |             |   |   |
|---|--|---------|-------------|---|---|
| Mode  | Port configuration mode  |         |             |   |   |
| Usage   | Enter the port configuration mode and open / close the spanning tree function of the port  |         |             |   |   |
| Example   | Open and close the spanning tree function of GigabitEthernet0/1<br>SWITCH(config-if-GigabitEthernet0/1)# spanning-tree enable<br>SWITCH(config-if-GigabitEthernet0/1)# no spanning-tree enable |         |             |   |   |
| Command   |  |         |             |   |   |
| <table border="1"> <thead> <tr> <th>command</th><th>description</th></tr> </thead> <tbody> <tr> <td><b>show spanning-tree interface gigabitEthernet 0/1</b></td><td>Display the spanning tree status and configuration information of GigabitEthernet0/1.</td></tr> </tbody> </table> |  | command | description | <b>show spanning-tree interface gigabitEthernet 0/1</b> | Display the spanning tree status and configuration information of GigabitEthernet0/1. |
| command   | description  |         |             |   |   |
| <b>show spanning-tree interface gigabitEthernet 0/1</b>   | Display the spanning tree status and configuration information of GigabitEthernet0/1.  |         |             |   |   |

## 21.1.11 spanning-tree bpdu

Configuring ports to handle BPDU

### spanning-tree bpdu [filter|guard]

|             | parameter | description   |
|-------------|-----------|---|
| Description | filter    | configuration port neither receives nor sends BPDU messages |
|             | guard     | Do not receive BPDU messages                                |

|         |   |
|---------|---|
| Default | NULL  |
| Mode    | Port configuration mode   |
| Usage   | Enter the port configuration mode and set the port's BPDU processing mode   |
| Example | The BPDU setting GigabitEthernet0/1 is handled as guard<br>SWITCH(config-if-GigabitEthernet0/1)# spanning-tree bpdu guard |

| Command | command   | 描述   |
|---------|---|--|
|         | <b>show spanning-tree interface gigabitEthernet 0/1</b> | Display the spanning tree status and configuration information of GigabitEthernet 0/1. |

---

## 21.1.12 spanning-tree cost

Configure the port external path cost, and the switch sends BPDU to the downstream switch, which adds the cost value of the transmit port to the cost field of the BPDU.

### spanning-tree cost [1-200000000]

| Parameter | parameter          | description                     |
|-----------|--------------------|---------------------------------|
|           | cost [1-200000000] | The value of external path cost |

|         |    |
|---------|----|
| Default | 19 |
|---------|----|

|      |                         |
|------|-------------------------|
| Mode | Port configuration mode |
|------|-------------------------|

|       |  |
|-------|--|
| Usage | Enter the port configuration mode and set the cost value of the port |
|-------|--|

|         |   |
|---------|---|
| Example | Set the cost value of GigabitEthernet0/1 to 2000<br>SWITCH(config-if-GigabitEthernet0/1)# spanning-tree cost 2000 |
|---------|---|

| Command | command   | description   |
|---------|---|---|
|         | <b>show spanning-tree interface gigabitEthernet 0/1</b> | Display the spanning tree status and configuration information of GigabitEthernet0/1. |

## 21.1.13 spanning-tree guard

Set port protection function

### spanning-tree guard [loop|none|root]

| Parameter | parameter | description   |
|-----------|-----------|---|
|           | loop      | Set the loop to avoid the port configured with this command. The BPDU continues to remain blocked and the loop is avoided |
|           | root      | Ports that enable this function do not re-select the root bridge after receiving a higher priority BPDU                   |
|           | none      | Turn off the guard function   |

|         |  |
|---------|--|
| Default | None   |
| Mode    | Port configuration mode  |
| Usage   | Enter the port configuration mode and set the port protection function |

|         |  |
|---------|--|
| Example | Set the loop guard on GigabitEthernet0/1<br>SWITCH(config-if-GigabitEthernet0/1)# spanning-tree guard loop |
|---------|--|

| Command | command   | description   |
|---------|---|---|
|         | <b>show spanning-tree interface gigabitEthernet 0/1</b> | Display the spanning tree status and configuration information of GigabitEthernet0/1. |

## 21.1.14 spanning-tree link-type

Sets the link type of the port. By default, the switch automatically selects the link type based on the duplex mode of the port, the full duplex port is point-to-point, and the half duplex port is shared

### **spanning-tree link-type [point-to-point|shared]**

| Parameter | parameter      | description                         |
|-----------|----------------|-------------------------------------|
|           | point-to-point | Set the link type is point-to-point |
|           | shared         | Set the link type is shared         |

|         |  |
|---------|--|
| Default | The switch automatically selects the link type, the full duplex port is point-to-point, and the half duplex port is shared |
| Mode    | Port configuration mode  |
| Usage   | Enter the port configuration mode and set the spanning-tree link-type.   |
| Example | Set the link type of GigabitEthernet0/1 to shared<br>SWITCH(config-if-GigabitEthernet0/1)# spanning-tree link-type shared  |

| Command | command   | description   |
|---------|---|---|
|         | <b>show spanning-tree interface gigabitEthernet 0/1</b> | Display the spanning tree status and configuration information of GigabitEthernet0/1. |

---

## 21.1.15 spanning-tree portfast edgeport

Some port is directly connected with PC, and the port is not possible loop, so these ports do not need to participate in the spanning tree operations, configured as edge port port linkup directly to the forwarding state, will not experience learn, listen

### spanning-tree portfast [edgeport|network]

|           | parameter | description                             |
|-----------|-----------|---|
| Parameter | edgeport  | Sets the edge-port for specified port   |
|           | network   | Sets the network port for specified por |

|         |  |
|---------|--|
| Default | network port   |
| Mode    | Port configuration mode  |
| Usage   | Enter the port configuration mode and set the port mode is edgeport  |
| Example | Set GigabitEthernet0/1 for the edgeport<br>SWITCH(config-if-GigabitEthernet0/1)# spanning-tree portfast edgeport |

|         | command   | description   |
|---------|---|---|
| Command | <b>show spanning-tree interface gigabitEthernet 0/1</b> | Display the spanning tree status and configuration information of GigabitEthernet0/1. |

## 21.1.16 spanning-tree priority

Configure the bridge priority of the port. If the user wants to specify a port as the root port, the bridge priority of the port can be increased.

### spanning-tree port-priority [0-240]

|           | parameter             | description   |
|-----------|-----------------------|---|
| Parameter | port-priority [0-240] | Sets the bridge priority of the port, with a range of 0-240 and must be a multiple of 16, default 128 |

|         |  |
|---------|--|
| Default | 128  |
| Mode    | Port configuration mode  |
| Usage   | Enter the port configuration mode and set the bridge priority of the port  |
| Example | Set the priority of GigabitEthernet0/1 to 112<br>SWITCH(config-if-GigabitEthernet0/1)# spanning-tree port-priority 112 |

| Command | command   | description   |
|---------|---|---|
|         | <b>show spanning-tree interface gigabitEthernet 0/1</b> | Display the spanning tree status and configuration information of GigabitEthernet0/1. |

## 21.1.17 spanning-tree bpdu [filtering|flooding]

BPDU packets are filtered or flood when stp is disabled on ports

### spanning-tree bpdu [filtering |flooding]

| Parameter | parameter | description   |
|-----------|-----------|---|
|           | filtering | bpdu packets are filtered when stp is disabled on ports                   |
|           | flooding  | bpdu packets are flooded to all ports with stp disabled and flooding mode |

|         |  |
|---------|--|
| Default | BPDU flooding  |
| Mode    | Global configuration mode  |
| Usage   | In global mode, configure the way BPDU messages are handled  |
| Example | When the spanning tree is closed, set the BPDU packet to filtering<br>SWITCH(config)# spanning-tree bpdu filtering |

| Command | command                   | description  |
|---------|---------------------------|--|
|         | <b>show spanning-tree</b> | Display the spanning tree status and configuration information |

## 21.1.18 spanning-tree trap

Spanning tree trap information

---

## **spanning-tree trap [new-root| topology-change]**

| Parameter | parameter  | description  |
|-----------|--|--|
|           | new-root   | new root trap  |
|           | topology-change  | topology change trap   |
| Default   | NULL   |  |
| Mode      | Global configuration mode  |  |
| Usage     | In global mode, configure the spanning-tree trap information                             |  |
| Example   | Enable the spanning-tree trap of new-root<br>SWITCH(config)# spanning-tree trap new-root |  |
| Command   | command  | description  |
|           | <b>show spanning-tree trap new-root</b>  | Display the spanning tree trap new-root status and configuration information |

## **21.2 Display relevant commands**

### **21.2.1 show spanning-tree**

Displays the current spanning tree status and configuration information

#### **Spanning-tree[cr | interface gigabitEthernet 0/x | link-aggregation]**

| Parameter | parameter   | description   |
|-----------|---|---|
|           | Interface gigabitEthernet 0/x   | Display the current port spanning tree status and configuration information Note that "cr" means no arguments are entered |
| Default   | NULL  |   |
| Mode      | Privileged mode   |   |
| Usage     | In privileged mode, view the spanning tree status. Show global status without parameters  |   |
| Example   | The following commands, from top to bottom, are to display the global state information of the spanning tree, display the spanning tree status information of the Gi 0/1.<br>SWITCH# show spanning-tree |   |

---

```
SWITCH# show spanning-tree interfaces GigabitEthernet 0/1
```

| Command | command  | description   |
|---------|--|---|
|         | <b>show spanning-tree</b>                                      | View the current spanning tree global state and configuration         |
|         | <b>Ruijie#show spanning-tree interface gigabitEthernet 0/x</b> | View the spanning tree status and configuration information for Gi0/1 |

## 22 DHCP v4server

### 22.1 Configure commands

#### 22.1.1 DHCP v4server

Configure the DHCP server parameter, then open DHCP sever, and the downstream device gets IP from the switch.

```
ip dhcpserver pool  
ip dhcpserver mask  
ip dhcpserver gate-way  
ip address  
ip dhcp server  
dhcp-snooping
```

| Parameter | parameter              | description   |
|-----------|------------------------|---|
|           | ip dhcpserver pool     | Configure the v4 server pool  |
|           | ip dhcpserver mask     | Configure the v4 server mask  |
|           | ip dhcpserver gate-way | Configure the v4 server gate-way  |
|           | ip address             | The IP address of the device must be in the same network segment as the address pool of the sever |
|           | ip dhcp server         | Enable the ip dhcp server function.use "no" command,you can disable the function                  |
|           | dhcp-snooping          | Enable the dhcp-snooping  |

|         |         |
|---------|---------|
| Default | disable |
|---------|---------|

---

| Mode                       | Global configuration mode  |         |             |                            |   |
|----------------------------|--|---------|-------------|----------------------------|---|
| Usage                      | In the global configuration mode, The first parameter configuration server, to enable IPv4 server, Lower establishment access to switch in the IP address pool.  |         |             |                            |   |
| Example                    | <pre>SWITCH(config)# ip dhcpserver pool 192.168.6.100-192.168.6.200 pt1:192.168.6.100, pt2:192.168.6.200 SWITCH(config)# ip dhcpserver mask 255.255.255.0 SWITCH(config)# ip dhcpserver gate-way 192.168.6.1 SWITCH(config)# ip address 192.168.6.1 SWITCH(config)# ip dhcp server SWITCH(config)# dhcp-snooping</pre> |         |             |                            |   |
| Command                    |  |         |             |                            |   |
|                            | <table border="1"> <thead> <tr> <th>command</th><th>description</th></tr> </thead> <tbody> <tr> <td><b>show ip dhcp server</b></td><td>Displays the ip dhcp server configuration</td></tr> </tbody> </table>   | command | description | <b>show ip dhcp server</b> | Displays the ip dhcp server configuration |
| command                    | description  |         |             |                            |   |
| <b>show ip dhcp server</b> | Displays the ip dhcp server configuration  |         |             |                            |   |

## 22.2 Display relevant commands

### 22.2.1 show ip dhcp server

Configure the DHCP server parameter, then open DHCP sever, and the downstream device gets IP from the switch.

#### Show ip dhcp server

|           |                                     |   |
|-----------|-------------------------------------|---|
| Parameter | parameter                           | description                             |
|           | <b>show ip dhcp server</b>          | Display the configure of ip dhcp server |
| Default   | NULL                                |   |
| Mode      | Privileged mode                     |   |
| Usage     | view the ip dhcp server information |   |

---

|         |                     |
|---------|---------------------|
| Example | Show ip dhcp server |
|---------|---------------------|

| Command | command                    | description                               |
|---------|----------------------------|---|
|         | <b>show ip dhcp server</b> | Displays the ip dhcp server configuration |

## 23 ipv4 Client

### 23.1 Configure commands

#### 23.1.1 ipv4 client

Configure the ipv4 client parameter, the switch can get IP from DHCP server

**ip dhcp**  
**no ip dhcp**

| Parameter | parameter  | description            |
|-----------|--|------------------------|
|           | ip dhcp  | Enbale ip dhcp client  |
|           | no ip dhcp   | Disable ip dhcp client |
| Default   | disable  |                        |
| Mode      | Global configuration mode  |                        |
| Usage     | In the global configure mode,enable the ip dhcp,the switch can get ip from DHCP server |                        |

|         |  |
|---------|--|
| Example | SWITCH(config)# ip dhcp<br>SWITCH# show ip dhcp<br>DHCP Status : enabled |
|---------|--|

| Command | command             | description                               |
|---------|---------------------|---|
|         | <b>show ip dhcp</b> | Displays the ip dhcp client configuration |

---

## 23.2 Display relevant commands

### 23.2.1 show ip DHCP

Enable the ip DHCP , the switch can get IP from DHCP server.

**Show ip dhcp**  
**Show ip**

|           | parameter    | description                                    |
|-----------|--------------|--|
| Parameter | show ip dhcp | Display the configure of ip dhcp               |
|           | Show ip      | Display the switch get ip from the dhcp server |

Default      NULL

Mode      Privileged mode

Usage      View the ip dhcp information

Example  
SWITCH# show ip  
IP Address: 192.168.0.143  
Subnet Netmask: 255.255.255.0  
Default Gateway: 192.168.0.177  
SWITCH# show ip dhcp  
DHCP Status : enabled

|         | command             | description                                     |
|---------|---------------------|---|
| Command | <b>show ip dhcp</b> | Displays the ip dhcp information                |
|         | <b>Show ip</b>      | Displays the switch get ip from the dhcp server |

# 24 ipv6 Client

## 24.1 Configure commands

### 24.1.1 ipv6 client

Configure the ipv4 client parameter, the switch can get IP from DHCP server

**Ipv6 dhcp**

**no ipv6 dhcp**

**ipv6 autoconfiguration**

**no ipv6 autoconfiguration**

| Parameter | parameter                 | description                     |
|-----------|---------------------------|---------------------------------|
|           | Ipv6 dhcp                 | Enbale ipv6 dhcp client         |
|           | no ipv6 dhcp              | Disable ipv6 dhcp client        |
|           | autoconfiguration         | Enable Ipv6 auto-configuration  |
|           | No ipv6 autoconfiguration | Disable Ipv6 auto-configuration |

Default disable

Mode Global configuration mode

Usage In the global configure mode,enable the ipv6 dhcp,the switch can get ipv6 from ipv6 DHCP server

Example  
SWITCH(config)# ipv6 dhcp  
SWITCH(config)# ipv6 autoconfiguration

| Command | command               | description                                 |
|---------|-----------------------|---|
|         | <b>show ipv6 dhcp</b> | Displays the ipv6 dhcp client configuration |

## 24.2 Display relevant commands

### 24.2.1 show ipv6 DHCP

---

Enable the ipv6 DHCP , the switch can get IP from DHCP server.

**Show ip dhcp**

**Show ipv6**

| Parameter | parameter      | description   |
|-----------|----------------|---|
|           | show ipv6 dhcp | Display the configure of ipv6 dhcp                    |
|           | Show ipv6      | Display the switch get ipv6 from the ipv6 dhcp server |

**Default** NULL

**Mode** Privileged mode

**Usage** View the ip dhcp information

**Example**

```
SWITCH# show ipv6 dhcp
DHCPv6 Status : enabled
SWITCH# show ipv6
IPv6 DHCP Configuration : Enabled
IPv6 DHCP DUID      : 00:01:00:01:00:00:00:5a:00:e0:4c:00:00:00
IPv6 Auto Configuration : Enabled
IPv6 Link Local Address : fe80::2e0:4cff:fe00:0/64
IPv6 static Address :
IPv6 static Gateway Address :
IPv6 in use Address   : fd00::2e0:4cff:fe00:0/64
IPv6 in use Address   : fe80::2e0:4cff:fe00:0/64
```

| Command | command               | description  |
|---------|-----------------------|--|
|         | <b>show ipv6 dhcp</b> | Displays the ip dhcp information                   |
|         | <b>Show ipv6</b>      | Disaplays the switch get ipv6 from the ipv6 server |

## 25 IGMP Snooping

### 25.1 command related to configuration

#### 25.1.1 ip igmp snooping

Enable igmp snooping in global configuration mode ,and Add "no" to the command will disable

---

igmp snooping.

**ip igmp snooping**  
**no ip igmp snooping**

| Parameter | parameter | description |
|-----------|-----------|-------------|
|           | None      | None        |

|         |                     |
|---------|---------------------|
| Default | Default is enabled. |
|---------|---------------------|

|      |                       |
|------|-----------------------|
| Mode | Global configuration. |
|------|-----------------------|

|       |   |
|-------|---|
| Usage | Use command <b>ip igmp snooping</b> to enable igmp snooping function.<br>Use the <b>no</b> form of this command to disable.<br>You can verify settings by the <b>show ip igmp snooping</b> command. |
|-------|---|

|         |   |
|---------|---|
| Example | SWITCH(config)# <b>ip igmp snooping</b><br>SWITCH(config)# <b>no ip igmp snooping</b> |
|---------|---|

| Command | command                      | description                      |
|---------|------------------------------|----------------------------------|
|         | <b>show ip igmp snooping</b> | verify settings of igmp snooping |

## 25.1.2 ip igmp snooping version

Set igmp snooping version in global configuration mode.

**ip igmp snooping version (2|3)**

| Parameter | parameter | description                      |
|-----------|-----------|----------------------------------|
|           | (2 3)     | IGMP version 2 or version 3 mode |

|         |                       |
|---------|-----------------------|
| Default | Default is version 3. |
|---------|-----------------------|

|      |                       |
|------|-----------------------|
| Mode | Global configuration. |
|------|-----------------------|

|       |   |
|-------|---|
| Usage | Use the <b>ip igmp snooping version</b> command to change IGMP support version.<br>You can verify settings by the <b>show ip igmp snooping</b> command. |
|-------|---|

|         |   |
|---------|---|
| Example | The following example specifies that set ip igmp snooping version 2.<br>Switch(config)# <b>ip igmp snooping version 2</b> |
|---------|---|

| Command | command                      | description                      |
|---------|------------------------------|----------------------------------|
|         | <b>Show ip igmp snooping</b> | verify settings of igmp snooping |

### 25.1.3 ip igmp snooping vlan

Enable igmp snooping of specific vlan,please input ip igmp snooping vlan *VLAN-LIST* in Global configuration mode.and Add "no" to the command will disable the igmp snooping function of the vlan.

**ip igmp snooping vlan *VLAN-LIST***

| Parameter | parameter        | description                   |
|-----------|------------------|-------------------------------|
|           | <b>VLAN-LIST</b> | Specifies VLAN ID list to set |

|         |                                   |
|---------|-----------------------------------|
| Default | Default is disable for all VLANs. |
|---------|-----------------------------------|

|      |                       |
|------|-----------------------|
| Mode | Global configuration. |
|------|-----------------------|

|       |  |
|-------|--|
| Usage | <p>Disable will clear all ip igmp snooping dynamic group and dynamic router port and make all static ip igmp invalid of this vlan.Will not learn dynamic group and router port by igmp message any more.</p> <p>Use the <b>ip igmp snooping vlan</b> command to enable IGMP on VLAN.</p> <p>Use the <b>no</b> form of this command to disable</p> <p>You can verify settings by the <b>show ip igmp snooping vlan</b> command.</p> |
|-------|--|

|         |   |
|---------|---|
| Example | The following example specifies the set ip igmp snooping vlan test:<br>SWITCH(config)# <b>ip igmp snooping vlan 2</b> |
|---------|---|

| Command | command                           | description                      |
|---------|-----------------------------------|----------------------------------|
|         | <b>Show ip igmp snooping vlan</b> | verify settings of igmp snooping |

## 25.1.4 ip igmp snooping fast-leave

Enable igmp snooping fast-leave function,If there is only one member of the group, and device receive leave report from the member, the group will leave immediately.

### ip igmp snooping fast-leave

| Parameter | parameter | description |
|-----------|-----------|-------------|
|           | None      | None        |

|         |                     |
|---------|---------------------|
| Default | Default is disable. |
|---------|---------------------|

|      |                       |
|------|-----------------------|
| Mode | Global configuration. |
|------|-----------------------|

|       |  |
|-------|--|
| Usage | Use the <b>ip igmp snooping fast-leave enable</b> command to enable fast-leave function.<br>Use the <b>no</b> form of this command to disable<br>You can verify settings by the <b>show ip igmp snooping vlan</b> command. |
|-------|--|

|         |   |
|---------|---|
| Example | The following example specifies the set ip igmp snooping fast-leave test:<br><b>SWITCH(config)# ip igmp snooping fast-leave</b> |
|---------|---|

| Command | command                           | description                      |
|---------|-----------------------------------|----------------------------------|
|         | <b>Show ip igmp snooping vlan</b> | verify settings of igmp snooping |

## 25.1.5 ip igmp snooping suppression

Enable igmp snooping of suppression function, router port will just forward one report packet when received many the same group join packet, and the function is invalid in igmp snooping v3.

### ip igmp snooping suppression

| Parameter | parameter | description |
|-----------|-----------|-------------|
|           | None      | None        |

|         |  |
|---------|--|
| Default | Default is disable.  |
| Mode    | Global configuration.  |
| Usage   | <p>Use the <b>ip igmp snooping suppression</b> command to enable suppression function.<br/>       Use the <b>no</b> form of this command to disable<br/>       You can verify settings by the <b>show ip igmp snooping vlan</b> command.</p> |
| Example | <p>The following example specifies that set ip igmp snooping suppression test:<br/>       SWITCH(config)# <b>ip igmp snooping suppression</b></p>  |

| Command | command                           | description                      |
|---------|-----------------------------------|----------------------------------|
|         | <b>Show ip igmp snooping vlan</b> | verify settings of igmp snooping |

## 25.1.6 ip igmp snooping unknown-multicast action

|   |  |
|---|--|
| Set the action when received unknown-multicast.                           |  |
| <b>ip igmp snooping unknown-multicast action (drop flood router-port)</b> |  |
| Parameter   | parameter  |
|   | (drop flood router-port)   |
| Default   | Default is drop.   |
| Mode  | Global configuration.  |
| Usage   | <p>When igmp and mld snooping disable,it can't set action router port.<br/>       When disable igmp snooping &amp; mld snooping,it set unknown multicast action flood.when action is router-port to flood or drop ,it will delete the unknown multicast group entry.</p> |
|   | Use the <b>ip igmp snooping unknown-multicast action</b> command to change action.   |

---

You can verify settings by the **show ip igmp snooping vlan** command.

|         |  |
|---------|--|
| Example | The following example specifies the set ip igmp unknown-multicast test:<br>SWITCH(config)# <b>ip igmp snooping unknown-multicast action drop</b> |
|---------|--|

| Command | command                           | description                      |
|---------|-----------------------------------|----------------------------------|
|         | <b>Show ip igmp snooping vlan</b> | verify settings of igmp snooping |

## 25.1.7 ip igmp snooping vlan mrouter

Add static router port for vlan.

**ip igmp snooping vlan VLAN-LIST mrouter interfaces GigabitEthernet|Aggregateport IF\_PORTS**

**No ip igmp snooping vlan VLAN-LIST mrouter interfaces**

**GigabitEthernet|Aggregateport IF\_PORTS**

| Parameter | parameter | description                            |
|-----------|-----------|--|
|           | VLAN-LIST | Specifies VLAN ID list to set          |
|           | IF-PORTS  | Specifies a port list to set or remove |

|         |                                      |
|---------|--------------------------------------|
| Default | None static router ports by default. |
|---------|--------------------------------------|

|      |                       |
|------|-----------------------|
| Mode | Global configuration. |
|------|-----------------------|

|       |   |
|-------|---|
| Usage | Use the <b>ip igmp snooping vlan mrouter</b> command to add static router port. All query packets will forward to this port.<br>Use the <b>no</b> form of this command to delete static router port.<br>You can verify settings by the <b>show ip igmp snooping vlan</b> command. |
|-------|---|

|         |   |
|---------|---|
| Example | The following example specifies that set ip igmp snooping static router port test:<br>SWITCH(config)# <b>ip igmp snooping vlan 2 mrouter interfaces GigabitEthernet 0/5</b> |
|---------|---|

| Command | command                           | description                             |
|---------|-----------------------------------|---|
|         | <b>Show ip igmp snooping vlan</b> | verify the ip igmp snooping Information |

## 25.1.8 ip igmp snooping vlan mrouter learn

Enable learning router port by routing protocol packets such as PIM/PIMv2,DVMRP,MOSPF,Use the no form of this command to disable..

**ip igmp snooping vlan VLAN-LIST mrouter learn pim-dvmrp**

**No ip igmp snooping vlan VLAN-LIST mrouter learn pim-dvmrp**

| Parameter | parameter | description                            |
|-----------|-----------|--|
|           | VLAN-LIST | Specifies VLAN ID list to set          |
|           | IF-PORTS  | Specifies a port list to set or remove |

|         |   |
|---------|---|
| Default | Default is enable.  |
| Mode    | Global configuration.   |
| Usage   | <p>Use the <b>ip igmp snooping vlan mrouter learn pim-dvmrp</b> command to Enable learning router port by routing protocol packets such as PIM/PIMv2,DVMRP,MOSPF.</p> <p>Use the <b>no</b> form of this command to disable .</p> <p>You can verify settings by the <b>show ip igmp snooping vlan</b> command.</p> |
| Example | The following example specifies that Enable learning router port test:<br>SWITCH(config)# <b>ip igmp snooping vlan 2 mrouter learn pim-dvmrp</b>  |

| Command | command                           | description                             |
|---------|-----------------------------------|---|
|         | <b>Show ip igmp snooping vlan</b> | verify the ip igmp snooping Information |

---

## 25.1.9 ip igmp snooping vlan static

Add a static group.

```
ip igmp snooping vlan VLAN-LIST static group-address interfaces
GigabitEthernet|Aggregateport IF_PORTS
no ip igmp snooping vlan VLAN-LIST static group-address interfaces
GigabitEthernet|Aggregateport IF_PORTS
```

| Parameter | parameter | description                            |
|-----------|-----------|--|
|           | Ip-addr   | Specifies multicast group ipv4 address |
|           | IF-PORTS  | Specifies a port list to set or remove |

Default No static group by default.

Mode Global configuration.

Usage Use the **ip igmp snooping vlan static** command to add a static group. The static group will not learn other dynamic ports.If the dynamic group exist ,then the static group will overlap the dynamic group.The static group set to valid unless igmp snooping vlan enable.

Use the **no** form of this command to delete static group.If remove the last member of static group,the static group will be delete.

You can verify settings by the **show ip igmp snooping group** command.

Example The following example specifies that set ip igmp snooping static group test:  
SWITCH(config)# ip igmp snooping vlan 2 static 239.1.1.1 interfaces  
GigabitEthernet 0/6

| Command | command                     | description             |
|---------|-----------------------------|-------------------------|
|         | Show ip igmp snooping group | verify the static group |

## 25.1.10 ip igmp snooping vlan querier

Enable querier for vlan.and Add "no" to the command will disable querier function.

```
ip igmp snooping vlan VLAN-LIST querier
```

---

**no ip igmp snooping vlan VLAN-LIST querier**

| Parameter | parameter | description                   |
|-----------|-----------|-------------------------------|
|           | VLAN-LIST | Specifies VLAN ID list to set |

Default No ip igmp snooping querier by Default.

Mode Global configuration.

Usage When enable ip igmp vlan querier, there will process router select, the select successful will send general and specific query.  
Use the **ip igmp snooping vlan querier** command to add querier.  
Use the **no** form of this command to delete querier.  
You can verify settings by the **show ip igmp snooping querier** command.

Example The following example specifies that enable vlan querier test:  
SWITCH(config)# **ip igmp snooping vlan 2 querier**

| Command | command                              | description                    |
|---------|--------------------------------------|--------------------------------|
|         | <b>Show ip igmp snooping querier</b> | verify the querier information |

## 25.1.11 ip igmp snooping vlan querier version

Set igmp snooping querier version in global configuration mode.

**ip igmp snooping vlan VLAN-LIST querier version (2|3)**

| Parameter | parameter  | description                   |
|-----------|------------|-------------------------------|
|           | VLAN-LINST | Specifies VLAN ID list to set |
|           | (2 3)      | Query version 2 or 3          |

Default Eable ip igmp snooping querier, the default querier verion is 2.

Mode Global configuration.

---

|       |  |
|-------|--|
| Usage | Use the <b>ip igmp snooping vlan querier version</b> command to set querier version.<br>You can verify settings by the <b>show ip igmp snooping querier</b> command. |
|-------|--|

|         |   |
|---------|---|
| Example | The following example specifies that set ip igmp snooping querier version test:<br>SWITCH(config)# <b>ip igmp snooping vlan 2 querier version 3</b> |
|---------|---|

| Command | command                              | description        |
|---------|--------------------------------------|--------------------|
|         | <b>Show ip igmp snooping querier</b> | verify the querier |

## 25.1.12 ip igmp snooping vlan querier last-member-query-count

Set igmp snooping querier last-member-query-count.

**ip igmp snooping vlan VLAN-LIST querier last-member-query-count <1-7>**  
**no ip igmp snooping vlan VLAN-LIST querier last-member-query-count**

| Parameter | parameter                    | description                              |
|-----------|------------------------------|--|
|           | VLAN-LINST                   | Specifies VLAN ID list to set            |
|           | last-member-query-count<1-7> | Specifies last member query count to set |

|         |               |
|---------|---------------|
| Default | Default is 2. |
|---------|---------------|

|      |                       |
|------|-----------------------|
| Mode | Global configuration. |
|------|-----------------------|

|       |  |
|-------|--|
| Usage | Use the <b>ip igmp snooping vlan querier last-member-query-count</b> command to change how many query packets will send.<br>Use the <b>no</b> form of this command to restore to default.<br>You can verify settings by the <b>show ip igmp snooping vlan</b> command. |
|-------|--|

|         |   |
|---------|---|
| Example | The following example specifies that set ip igmp snooping querier last-member-query-count test:<br>SWITCH(config)# <b>ip igmp snooping vlan 2 querier last-member-query-count 5</b> |
|---------|---|

| Command | command                           | description                    |
|---------|-----------------------------------|--------------------------------|
|         | <b>Show ip igmp snooping vlan</b> | verify the querier information |

### 25.1.13 ip igmp snooping vlan querier last-member-query-interval

Set igmp snooping querier last-member-query-interval.

**ip igmp snooping vlan VLAN-LIST querier last-member-query-interval <1-25>**  
**no ip igmp snooping vlan VLAN-LIST querier last-member-query-interval**

| Parameter | parameter                                      | description                                 |
|-----------|--|---|
|           | <b>VLAN-LIST</b>                               | Specifies VLAN ID list to set               |
|           | <b>last-member-query-interval &lt;1-25&gt;</b> | Specifies last member query interval to set |

|         |               |
|---------|---------------|
| Default | Default is 1. |
|---------|---------------|

|      |                       |
|------|-----------------------|
| Mode | Global configuration. |
|------|-----------------------|

|       |   |
|-------|---|
| Usage | <p>Use the <b>ip igmp snooping vlan querier last-member-query-interval</b> command to set interval between each query packet.</p> <p>Use the <b>no</b> form of this command to restore to default.</p> <p>You can verify settings by the <b>show ip igmp snooping vlan</b> command.</p> |
|-------|---|

|         |  |
|---------|--|
| Example | <p>The following example specifies that set ip igmp snooping querier last-member-query-interval test:</p> <pre>SWITCH(config)# ip igmp snooping vlan 2 querier last-member-query-interval 10</pre> |
|---------|--|

| Command | command                           | description                    |
|---------|-----------------------------------|--------------------------------|
|         | <b>Show ip igmp snooping vlan</b> | verify the querier information |

## 25.1.14 ip igmp snooping vlan querier max-response-time

Set igmp snooping querier max-response-time.

**ip igmp snooping vlan VLAN-LIST querier max-response-time <5-20>**  
**no ip igmp snooping vlan VLAN-LIST querier max-response-time**

| Parameter | parameter                         | description                      |
|-----------|-----------------------------------|----------------------------------|
|           | VLAN-LIST                         | Specifies VLAN ID list to set    |
|           | last-member-query-interval <5-20> | Specifies a response time to set |

|         |                |
|---------|----------------|
| Default | Default is 10. |
|---------|----------------|

|      |                       |
|------|-----------------------|
| Mode | Global configuration. |
|------|-----------------------|

|       |  |
|-------|--|
| Usage | Use the <b>ip igmp snooping vlan querier max-response-time</b> command to set response-time.<br>Use the <b>no</b> form of this command to restore to default.<br>You can verify settings by the <b>show ip igmp snooping vlan</b> command. |
|-------|--|

|         |  |
|---------|--|
| Example | The following example specifies that set ip igmp snooping querier max-response-time test:<br><b>SWITCH(config)# ip igmp snooping vlan 2 querier max-response-time 20</b> |
|---------|--|

| Command | command                           | description                    |
|---------|-----------------------------------|--------------------------------|
|         | <b>Show ip igmp snooping vlan</b> | verify the querier information |

## 25.1.15 ip igmp snooping vlan querier query-interval

Set igmp snooping querier Interval between each query.

**ip igmp snooping vlan VLAN-LIST querier query-interval <30-18000>**  
**no ip igmp snooping vlan VLAN-LIST querier query-interval**

| Parameter | parameter             | description                      |
|-----------|-----------------------|----------------------------------|
|           | VLAN-LIST             | Specifies VLAN ID list to set    |
|           | query-interval <5-20> | Specifies a response time to set |

---

| Default                           | Default is 125.  |         |             |                                   |                                |
|-----------------------------------|--|---------|-------------|-----------------------------------|--------------------------------|
| Mode                              | Global configuration.  |         |             |                                   |                                |
| Usage                             | <p>Use the <b>ip igmp snooping vlan querier query-interval</b> command to set Interval between each query.</p> <p>Use the <b>no</b> form of this command to restore to default.</p> <p>You can verify settings by the <b>show ip igmp snooping vlan</b> command.</p> |         |             |                                   |                                |
| Example                           | <p>The following example specifies that set ip igmp snooping querier version test:</p> <pre>SWITCH(config)# ip igmp snooping vlan 2 querier query-interval 200</pre>   |         |             |                                   |                                |
| Command                           | <table border="1"> <thead> <tr> <th>command</th><th>description</th></tr> </thead> <tbody> <tr> <td><b>Show ip igmp snooping vlan</b></td><td>verify the querier information</td></tr> </tbody> </table>   | command | description | <b>Show ip igmp snooping vlan</b> | verify the querier information |
| command                           | description  |         |             |                                   |                                |
| <b>Show ip igmp snooping vlan</b> | verify the querier information   |         |             |                                   |                                |

### 25.1.16 ip igmp snooping vlan robustness-variable

Set igmp snooping querier robustness-variable.

**ip igmp snooping vlan VLAN-LIST robustness-variable <1-7>**  
**no ip igmp snooping vlan VLAN-LIST robustness-variable**

| Parameter | parameter   | description                         |
|-----------|---|-------------------------------------|
|           | VLAN-LIST   | Specifies VLAN ID list to set       |
|           | robustness-variable <1-7>   | Specifies a robustness value to set |
| Default   | Default is 2.   |                                     |
| Mode      | Global configuration.   |                                     |
| Usage     | <p>Use the <b>ip igmp snooping vlan robustness-variable</b> command to times to retry .</p> <p>Use the <b>no</b> form of this command to restore to default.</p> <p>You can verify settings by the <b>show ip igmp snooping vlan</b> command.</p> |                                     |

---

|         |   |
|---------|---|
| Example | The following example specifies that set ip igmp snooping querier robustness-variable test:<br>SWITCH(config)# <b>ip igmp snooping vlan 1 robustness-variable 5</b> |
|---------|---|

| Command | command                           | description                    |
|---------|-----------------------------------|--------------------------------|
|         | <b>Show ip igmp snooping vlan</b> | verify the querier information |

## 25.1.17 ip igmp profile

Add igmp profile if you want to permit or deny some groups.

**ip igmp profile <1-128>**  
**no ip igmp profile <1-128>**

| Parameter | parameter            | description          |
|-----------|----------------------|----------------------|
|           | <b>&lt;1-128&gt;</b> | Specifies profile ID |

|         |                              |
|---------|------------------------------|
| Default | No profile exist by default. |
|---------|------------------------------|

|      |                       |
|------|-----------------------|
| Mode | Global configuration. |
|------|-----------------------|

|       |  |
|-------|--|
| Usage | Use the <b>ip igmp profile</b> command to enter profile configuration.<br>Use the <b>no</b> form of this command to delete profile.<br>You can verify settings by the <b>show ip igmp profile</b> command. |
|-------|--|

|         |   |
|---------|---|
| Example | The following example specifies that set ip igmp snooping profile test:<br>SWITCH(config)# <b>ip igmp profile 1</b> |
|---------|---|

| Command | command                     | description                            |
|---------|-----------------------------|--|
|         | <b>Show ip igmp profile</b> | verify the ip igmp profile information |

## 25.1.18 profile range

---

Configure igmp profile if you want to permit or deny some groups.

**Profile rang ip <ip-addr> [ip-addr] action (permit|deny)**

| Parameter | parameter     | description   |
|-----------|---------------|---|
|           | <ip-addr>     | Start ipv4 multicast address  |
|           | [ip-addr]     | End ipv4 multicast address  |
|           | (permit deny) | Permit:allow Multicast address rang ip address learning<br>Deny:do not allow Multicast address rang ip address learning |

|         |       |
|---------|-------|
| Default | None. |
|---------|-------|

|      |                                  |
|------|----------------------------------|
| Mode | igmp profile configuration mode. |
|------|----------------------------------|

|       |  |
|-------|--|
| Usage | Use the <b>profile</b> command to generate IGMP profile .<br>You can verify settings by the <b>show ip igmp profile</b> command. |
|-------|--|

|         |  |
|---------|--|
| Example | The following example specifies that set ip igmp snooping profile test:<br>SWITCH(config)# <b>ip igmp profile 1</b><br>SWITCH(config)# <b>profile range ip 225.1.1.1 225.1.2.1 action permit</b> |
|---------|--|

| Command | command                     | description                            |
|---------|-----------------------------|--|
|         | <b>Show ip igmp profile</b> | verify the ip igmp profile information |

## 25.1.19 ip igmp filter

Use ip igmp filter command to bind a profile for port.

**ip igmp filter <1-128>  
no ip igmp filter**

| Parameter | parameter | description          |
|-----------|-----------|----------------------|
|           | <1-128>   | Specifies profile ID |

---

| Default                    | None.  |         |             |                            |  |
|----------------------------|--|---------|-------------|----------------------------|--|
| Mode                       | Port configuration.  |         |             |                            |  |
| Usage                      | <p>Use the <b>ip igmp filter</b> command to bind a profile for port. When the port bind a profile. Then the port learning group will update, if the group is not match the profile rule it will remove the port from the group. Static group is excluded.</p> <p>Use the <b>no</b> form of this command to delete profile.</p> <p>You can verify settings by the <b>show running-config</b> command.</p> |         |             |                            |  |
| Example                    | <p>The following example specifies that set ip igmp filter test.</p> <pre>SWITCH(config)# interface GigabitEthernet 0/1 SWITCH(config-if-GigabitEthernet0/1)# ip igmp filter 1</pre>   |         |             |                            |  |
| Command                    | <table border="1"> <thead> <tr> <th>command</th><th>description</th></tr> </thead> <tbody> <tr> <td><b>Show running-config</b></td><td>verify the ip igmp profile information</td></tr> </tbody> </table>  | command | description | <b>Show running-config</b> | verify the ip igmp profile information |
| command                    | description  |         |             |                            |  |
| <b>Show running-config</b> | verify the ip igmp profile information   |         |             |                            |  |

## 25.2 command related to display and monitoring

### 25.2.1 clear ip igmp snooping statistics

clear igmp snooping statistics.

#### clear ip igmp snooping statistics

| Parameter | parameter        | description                       |
|-----------|------------------|-----------------------------------|
|           | None             | Clear all igmp packets statistics |
| Default   | None.            |                                   |
| Mode      | Privileged EXEC. |                                   |

---

|       |  |
|-------|--|
| Usage | This command will clear all of the igmp packets statistics.<br>You can verify settings by the <b>show ip igmp snooping statistics</b> command. |
|-------|--|

|         |  |
|---------|--|
| Example | The following example specifies that show ip igmp snooping statistics test.<br><b>SWITCH#clear ip igmp snooping statistics</b><br><b>SWITCH#show ip igmp snooping statistics</b> |
|---------|--|

Packet Statistics

|                                 |   |   |
|---------------------------------|---|---|
| Total RX                        | : | 0 |
| Valid RX                        | : | 0 |
| Invalid RX                      | : | 0 |
| Other RX                        | : | 0 |
| Leave RX                        | : | 0 |
| Report RX                       | : | 0 |
| General Query RX                | : | 0 |
| Special Group Query RX          | : | 0 |
| Special Group & Source Query RX | : | 0 |
| Leave TX                        | : | 0 |
| Report TX                       | : | 0 |
| General Query TX                | : | 0 |
| Special Group Query TX          | : | 0 |
| Special Group & Source Query TX | : | 0 |

| Command | command                                 | description                          |
|---------|---|--------------------------------------|
|         | <b>Show ip igmp snooping statistics</b> | Verify igmp snooping statistics info |

## 25.2.2 clear ip igmp snooping groups

clear igmp snooping groups.

**clear ip igmp snooping groups [(dynamic|static)]**

| Parameter | parameter        | description                                     |
|-----------|------------------|---|
|           | None             | Clear ip igmp groups include dynamic and static |
|           | (dynamic static) | Ip igmp group is dynamic and static             |

|         |       |
|---------|-------|
| Default | None. |
|---------|-------|

|      |                  |
|------|------------------|
| Mode | Privileged EXEC. |
|------|------------------|

---

|       |  |
|-------|--|
| Usage | This command will clear the igmp groups for dynamic or static or all of type.<br>You can verify settings by the <b>show ip igmp snooping groups</b> command. |
|-------|--|

| Example                             | <p>The following example specifies that show ip igmp snooping groups test.</p> <pre>SWITCH#clear ip igmp snooping groups SWITCH#show ip igmp snooping groups</pre> <table border="1" style="margin-top: 10px; width: 100%; border-collapse: collapse;"> <thead> <tr> <th>VLAN</th><th>Group IP Address</th><th>Type</th><th>Life(Sec)</th><th>Port</th></tr> </thead> <tbody> <tr><td>-----</td><td>-----</td><td>-----</td><td>-----</td><td>-----</td></tr> </tbody> </table> <p>Total Number of Entry = 0</p> | VLAN    | Group IP Address | Type                                | Life(Sec)                        | Port | ----- | ----- | ----- | ----- | ----- |
|-------------------------------------|--|---------|------------------|-------------------------------------|----------------------------------|------|-------|-------|-------|-------|-------|
| VLAN                                | Group IP Address   | Type    | Life(Sec)        | Port                                |                                  |      |       |       |       |       |       |
| -----                               | -----  | -----   | -----            | -----                               |                                  |      |       |       |       |       |       |
| Command                             | <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="background-color: #f2f2f2;">command</th><th style="background-color: #f2f2f2;">description</th></tr> </thead> <tbody> <tr> <td><b>Show ip igmp snooping groups</b></td><td>Verify igmp snooping groups info</td></tr> </tbody> </table>   | command | description      | <b>Show ip igmp snooping groups</b> | Verify igmp snooping groups info |      |       |       |       |       |       |
| command                             | description  |         |                  |                                     |                                  |      |       |       |       |       |       |
| <b>Show ip igmp snooping groups</b> | Verify igmp snooping groups info   |         |                  |                                     |                                  |      |       |       |       |       |       |

### 25.2.3 show ip igmp snooping

| View igmp snooping global info. |   |           |             |      |      |
|---------------------------------|---|-----------|-------------|------|------|
| <b>show ip igmp snooping</b>    |   |           |             |      |      |
| Parameter                       | <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="background-color: #f2f2f2;">parameter</th><th style="background-color: #f2f2f2;">description</th></tr> </thead> <tbody> <tr> <td>None</td><td>None</td></tr> </tbody> </table>   | parameter | description | None | None |
| parameter                       | description   |           |             |      |      |
| None                            | None  |           |             |      |      |
| Default                         | None.   |           |             |      |      |
| Mode                            | Privileged EXEC.  |           |             |      |      |
| Usage                           | This command will display ip igmp snooping global info.   |           |             |      |      |
| Example                         | <p>The following example specifies that show ip igmp snooping test.</p> <pre>SWITCH#show ip igmp snooping IGMP Snooping state : Enable IGMP Snooping Version : v3 IGMP Fast-Leave : Disable IGMP Report Suppression : Disable IGMP Forward Method : mac IGMP Unknown IP Multicast Action : Drop IGMP Multicast router learning mode : pim-dvmrp</pre> <p>vlan 1</p> <pre>----- IGMP Snooping state : enabled IGMP Fast-Leave : disabled IGMP Multicast router learning mode : pim-dvmrp</pre> |           |             |      |      |

---

IGMP VLAN querier : disabled

| Command | command                      | description                      |
|---------|------------------------------|----------------------------------|
|         | <b>Show ip igmp snooping</b> | verify settings of igmp snooping |

## 25.2.4 show ip igmp snooping vlan

View igmp snooping vlan info.

**show ip igmp snooping vlan [VLAN-LIST]**

| Parameter | parameter   | description                               |
|-----------|-------------|---|
|           | None        | Show all ip igmp snooping vlan info       |
|           | [VLAN-LIST] | Show specifies vlan ip igmp snooping info |

Default None.

Mode Privileged EXEC.

Usage This command will display ip igmp snooping vlan info.

Example The following example specifies that show ip igmp snooping vlan test.

```
SWITCH#show ip igmp snooping vlan
IGMP Snooping global state : enabled
IGMP Global IGMPv2 fast-leave : disabled
IGMP Global multicast router learning mode : pim-dvmrp
```

```
vlan 1
-----
IGMP Snooping state : enabled
IGMP Fast-Leave : disabled
IGMP Multicast router learning mode : pim-dvmrp
IGMP VLAN querier : disabled
```

| Command | command                           | description                           |
|---------|-----------------------------------|---------------------------------------|
|         | <b>Show ip igmp snooping vlan</b> | verify settings of igmp snooping vlan |

## 25.2.5 show ip igmp snooping forward-all

Display igmp snooping forward-all info.

**show ip igmp snooping forward-all [/vlanVLAN-LIST]**

| Parameter | parameter   | description   |
|-----------|-------------|---|
|           | None        | Show all ip igmp snooping vlan forward-all info       |
|           | [VLAN-LIST] | Show specifies vlan ip igmp snooping forward-all info |

|         |       |
|---------|-------|
| Default | None. |
|---------|-------|

|      |                  |
|------|------------------|
| Mode | Privileged EXEC. |
|------|------------------|

|       |  |
|-------|--|
| Usage | This command will display ip igmp snooping forward-all info. |
|-------|--|

|         |   |
|---------|---|
| Example | The following example specifies that show ip igmp snooping forward-all test.<br><b>SWITCH#show ip igmp snooping forward-all</b> |
|---------|---|

IGMP Snooping VLAN : 1  
IGMP Snooping static port : None  
IGMP Snooping forbidden port : None

| Command | command                                  | description                                  |
|---------|--|--|
|         | <b>Show ip igmp snooping forward-all</b> | verify settings of igmp snooping forward-all |

## 25.2.6 show ip igmp snooping groups

Display igmp snooping groups info.

**show ip igmp snooping groups [counters|dynamic|static]**

| Parameter | parameter        | description   |
|-----------|------------------|---|
|           | None             | Show all ip igmp groups include dynamic and static info |
|           | Counters         | Show dynamic and static groups counters                 |
|           | (dynamic static) | Show dynamic or static igmp groups                      |

---

| Default                             | None.  |         |                  |                                     |                                  |      |   |           |        |    |       |   |                 |         |     |       |
|-------------------------------------|--|---------|------------------|-------------------------------------|----------------------------------|------|---|-----------|--------|----|-------|---|-----------------|---------|-----|-------|
| Mode                                | Privileged EXEC.   |         |                  |                                     |                                  |      |   |           |        |    |       |   |                 |         |     |       |
| Usage                               | This command will display ip igmp snooping groups for dynamic or static or all of type.  |         |                  |                                     |                                  |      |   |           |        |    |       |   |                 |         |     |       |
| Example                             | <p>The following example specifies that show ip igmp snooping groups test.</p> <pre>SWITCH#show ip igmp snooping groups</pre> <table border="1"> <thead> <tr> <th>VLAN</th> <th>Group IP Address</th> <th>Type</th> <th>Life(Sec)</th> <th>Port</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>239.1.1.1</td> <td>Static</td> <td>--</td> <td>gi0/3</td> </tr> <tr> <td>1</td> <td>239.255.255.250</td> <td>Dynamic</td> <td>253</td> <td>gi0/1</td> </tr> </tbody> </table> <p>Total Number of Entry = 2</p> | VLAN    | Group IP Address | Type                                | Life(Sec)                        | Port | 1 | 239.1.1.1 | Static | -- | gi0/3 | 1 | 239.255.255.250 | Dynamic | 253 | gi0/1 |

| <b>Show ip igmp snooping groups</b> | verify igmp snooping groups info   |         |                  |                                     |                                  |      |   |           |        |    |       |   |                 |         |     |       |

## 25.2.7 show ip igmp snooping mrouter

| Display igmp snooping mrouter info.                            |   |           |             |      |  |                  |                                     |
|--|---|-----------|-------------|------|--|------------------|-------------------------------------|
| <b>show ip igmp snooping mrouter [counters dynamic static]</b> |   |           |             |      |  |                  |                                     |
|  |   |           |             |      |  |                  |                                     |
| Parameter  | <table border="1"> <thead> <tr> <th>parameter</th> <th>description</th> </tr> </thead> <tbody> <tr> <td>None</td> <td>Show all ip igmp mrouter include dynamic and static info</td> </tr> <tr> <td>(dynamic static)</td> <td>Show dynamic or static igmp mrouter</td> </tr> </tbody> </table> | parameter | description | None | Show all ip igmp mrouter include dynamic and static info | (dynamic static) | Show dynamic or static igmp mrouter |
| parameter  | description   |           |             |      |  |                  |                                     |
| None   | Show all ip igmp mrouter include dynamic and static info  |           |             |      |  |                  |                                     |
| (dynamic static)   | Show dynamic or static igmp mrouter   |           |             |      |  |                  |                                     |
| Default  | None.   |           |             |      |  |                  |                                     |
| Mode   | Privileged EXEC.  |           |             |      |  |                  |                                     |
| Usage  | This command will display ip igmp snooping mrouter for dynamic or static or all of type.  |           |             |      |  |                  |                                     |

**Example**

The following example specifies that show ip igmp snooping mrouter test.  
SWITCH#**show ip igmp snooping mrouter**

| VID | Port  | type   | Expiry Time(Sec) |
|-----|-------|--------|------------------|
| 1   | gi0/8 | Static | ---              |

Total Entry 1

**Command**

| command                              | description                       |
|--------------------------------------|-----------------------------------|
| <b>Show ip igmp snooping mrouter</b> | verify igmp snooping mrouter info |

## 25.2.8 show ip igmp snooping querier

Display igmp snooping querier info.

**show ip igmp snooping querier**

**Parameter**

| parameter | description                        |
|-----------|------------------------------------|
| None      | Show all vlan ip igmp querier info |

**Default**

None.

**Mode**

Privileged EXEC.

**Usage**

This command will display all of the static vlan ip igmp mrouter info.

**Example**

The following example specifies that show ip igmp snooping querier test.  
SWITCH#**show ip igmp snooping querier**

| VID | State    | Status      | Version | Querier IP |
|-----|----------|-------------|---------|------------|
| 1   | Disabled | Non-Querier | No      | -----      |

Total Entry 1

**Command**

| command                              | description                       |
|--------------------------------------|-----------------------------------|
| <b>Show ip igmp snooping querier</b> | Verify igmp snooping querier info |

# 26 MLD Snooping

## 26.1 command related to configuration

### 26.1.1 ipv6 mld snooping

Enable mld snooping in global configuration mode ,and Add "no" to the command will disable mld snooping.

**ipv6 mld snooping**  
**no ipv6 mld snooping**

| Parameter | parameter | description |
|-----------|-----------|-------------|
|           | None      | None        |

|         |   |
|---------|---|
| Default | Default is enabled.   |
| Mode    | Global configuration.   |
| Usage   | <p>Use command <b>ipv6 mld snooping</b> to enable igmp snooping function.<br/>Use the <b>no</b> form of this command to disable.Disable will clear all ipv6 mld snooping dynamic groups and dynamic router port,and make the static ipv6 mld group invalid.No more dynamic group and router port by mld message will be learned<br/>You can verify settings by the <b>show ipv6 mld snooping</b> command.</p> |

| Example | command   | description                          |
|---------|---|--------------------------------------|
|         | <b>SWITCH(config)# ipv6 mld snooping</b><br><b>SWITCH(config)# no ipv6 mld snooping</b> | verify settings of ipv6 mld snooping |

### 26.1.2 ipv6 mld snooping version

Set mld snooping version in global configuration mode.

**ipv6 mld snooping version (1|2)**

| Parameter | parameter | description                     |
|-----------|-----------|---------------------------------|
|           | (1 2)     | MLD version 1 or version 2 mode |

| Default                       | Default is version 1.  |         |             |                               |                                 |
|-------------------------------|--|---------|-------------|-------------------------------|---------------------------------|
| Mode                          | Global configuration.  |         |             |                               |                                 |
| Usage                         | <p>Use the <b>ipv6 mld snooping version</b> command to change MLD support version. Version 2 packet won't be processed if choose version 1.</p> <p>You can verify settings by the <b>show ipv6 mld snooping</b> command.</p> |         |             |                               |                                 |
| Example                       | <p>The following example specifies that set ipv6 mld snooping version 2.</p> <pre>Switch(config)#<b>ipv6 mld snooping version 2</b></pre>  |         |             |                               |                                 |
| Command                       | <table border="1"> <thead> <tr> <th>command</th><th>description</th></tr> </thead> <tbody> <tr> <td><b>Show ipv6 mld snooping</b></td><td>verify settings of mld snooping</td></tr> </tbody> </table>                        | command | description | <b>Show ipv6 mld snooping</b> | verify settings of mld snooping |
| command                       | description  |         |             |                               |                                 |
| <b>Show ipv6 mld snooping</b> | verify settings of mld snooping  |         |             |                               |                                 |

### 26.1.3 ipv6 mld snooping vlan

Enable mld snooping of specific vlan, please input `ipv6 mld snooping vlan VLAN-LIST` in Global configuration mode. and Add "no" to the command will disable the mld snooping function of the vlan.

**ipv6 mld snooping vlan VLAN-LIST**

| Parameter | <table border="1"> <thead> <tr> <th>parameter</th><th>description</th></tr> </thead> <tbody> <tr> <td>VLAN-LIST</td><td>Specifies VLAN ID list to set</td></tr> </tbody> </table>  | parameter | description | VLAN-LIST | Specifies VLAN ID list to set |
|-----------|--|-----------|-------------|-----------|-------------------------------|
| parameter | description  |           |             |           |                               |
| VLAN-LIST | Specifies VLAN ID list to set  |           |             |           |                               |
| Default   | Default is disable for all VLANs.  |           |             |           |                               |
| Mode      | Global configuration.  |           |             |           |                               |
| Usage     | <p>Disable will clear all ipv6 mld snooping dynamic group and dynamic router port and make all static ipv6 mld invalid of this vlan. Will not learn dynamic group and router port by mld message any more.</p> <p>Use the <b>ipv6 mld snooping vlan</b> command to enable mld on VLAN.</p> <p>Use the <b>no</b> form of this command to disable.</p> <p>You can verify settings by the <b>show ipv6 mld snooping vlan</b> command.</p> |           |             |           |                               |

---

|         |   |
|---------|---|
| Example | The following example specifies the set ipv6 mld snooping vlan test:<br>SWITCH(config)# <b>ipv6 mld snooping vlan 2</b> |
|---------|---|

| Command | command                            | description                     |
|---------|------------------------------------|---------------------------------|
|         | <b>Show ipv6 mld snooping vlan</b> | verify settings of mld snooping |

## 26.1.4 ipv6 mld snooping vlan immediate-leave

Enable mld snooping vlan immediate-leave function, If there is only one member of the group, and device receive leave packet from the member, the group will leave immediately.

### ipv6 mld snooping vlan immediate-leave

| Parameter | parameter        | description                   |
|-----------|------------------|-------------------------------|
|           | <b>VLAN-LIST</b> | Specifies VLAN ID list to set |

|         |                     |
|---------|---------------------|
| Default | Default is disable. |
|---------|---------------------|

|      |                       |
|------|-----------------------|
| Mode | Global configuration. |
|------|-----------------------|

|       |  |
|-------|--|
| Usage | Use the <b>ipv6 mld snooping vlan immediate-leave</b> command to enable vlan immediate-leave function. Group will remove port immediately when receive leave packet.<br>Use the <b>no</b> form of this command to disable.<br>You can verify settings by the <b>show ipv6 mld snooping vlan</b> command. |
|-------|--|

|         |   |
|---------|---|
| Example | The following example specifies the set ipv6 mld snooping vlan immediate-leave test:<br>SWITCH(config)# <b>ipv6 mld snooping vlan 1 immediate-leave</b> |
|---------|---|

| Command | command                            | description                     |
|---------|------------------------------------|---------------------------------|
|         | <b>Show ipv6 mld snooping vlan</b> | verify settings of mld snooping |

## 26.1.5 ipv6 mld snooping report-suppression

Enable mld snooping of report-suppression function,router port will just forward one report packet when received many the same group join packet.and the function is invalid in mld snooping v2.

**ipv6 mld snooping report-suppression**

**no ipv6 mld snooping report-suppression**

| Parameter | parameter | description |
|-----------|-----------|-------------|
|           | None      | None        |

|         |                    |
|---------|--------------------|
| Default | Default is enable. |
|---------|--------------------|

|      |                       |
|------|-----------------------|
| Mode | Global configuration. |
|------|-----------------------|

|       |   |
|-------|---|
| Usage | <p>Use the <b>ipv6 mld snooping report-suppression</b> command to enable report-suppression function.</p> <p>Use the <b>no</b> form of this command to disable. Disable report -supression will forward all received reports to the vlan router ports.</p> <p>You can verify settings by the <b>show ipv6 mld snooping</b> command.</p> |
|-------|---|

|         |   |
|---------|---|
| Example | The following example specifies that disable ipv6 mld snooping report-suppression test:<br>SWITCH(config)# <b>no ipv6 mld snooping report-suppression</b> |
|---------|---|

| Command | command                       | description                     |
|---------|-------------------------------|---------------------------------|
|         | <b>Show ipv6 mld snooping</b> | verify settings of mld snooping |

## 26.1.6 ipv6 mld snooping unknown-multicast action

Set the action when received unknown-multicast.

**ipv6 mld snooping unknown-multicast action (drop|flood|router-port)**

| Parameter | parameter                | description  |
|-----------|--------------------------|--|
|           | (drop flood router-port) | Drop/flood in vlan or forward to router port of unknown multicast packet |

---

| Default                            | Default is flood.  |         |             |                                    |                                 |
|------------------------------------|--|---------|-------------|------------------------------------|---------------------------------|
| Mode                               | Global configuration.  |         |             |                                    |                                 |
| Usage                              | <p>When mld and mld snooping disable,it can't set action router port .</p> <p>When disable mld snooping &amp; mld snooping,it set unknown multicast action flood.when action is router-port to flood or drop ,it will delete the unknown multicast group entry.</p> <p>Use the ipv6 mld <b>snooping unknown-multicast action</b> command to change action.<br/>You can verify settings by the <b>show ipv6 mld snooping</b> command.</p> |         |             |                                    |                                 |

| <b>Show ipv6 mld snooping vlan</b> | verify settings of mld snooping  |         |             |                                    |                                 |

## 26.1.7 ipv6 mld snooping vlan static-router-port

Add static router port for vlan.

**ipv6 mld snooping vlan VLAN-LIST static-router-port GigabitEthernet|Aggregateport**

**IF\_PORTS**

**No ipv6 mld snooping vlan VLAN-LIST static-router-port GigabitEthernet|Aggregateport**

**IF\_PORTS**

| Parameter | parameter                            | description                            |
|-----------|--------------------------------------|--|
|           | VLAN-LIST                            | Specifies VLAN ID list to set          |
|           | IF-PORTS                             | Specifies a port list to set or remove |
| Default   | None static router ports by default. |  |

---

| Mode  | Global configuration.  |           |             |                                      |   |          |  |
|---|--|-----------|-------------|--------------------------------------|---|----------|--|
| Usage   | <p>Use the <b>ipv6 mld snooping vlan static-router-port</b> command to add static router port.<br/>All query packets will forward to this port .<br/>Use the <b>no</b> form of this command to delete static router port.<br/>You can verify settings by the <b>show ipv6 mld snooping router</b> command.</p> |           |             |                                      |   |          |  |
| Example   | The following example specifies that set ipv6 mld snooping static router port test:<br>SWITCH(config)# <b>ipv6 mld snooping vlan 2 static-router-port GigabitEthernet 0/5</b>  |           |             |                                      |   |          |  |

| command   | description  |           |             |                                      |   |          |  |
| <b>Show ipv6 mld snooping router</b>  | verify the ipv6 mld snooping router Information  |           |             |                                      |   |          |  |
| <b>26.1.8 ipv6 mld snooping vlan router learn</b>   |  |           |             |                                      |   |          |  |
| Enable learning router port by routing protocol packets such as PIM/PIMv2,DVMRP,MOSPF,Use the no form of this command to disable..    |  |           |             |                                      |   |          |  |
| <b>ipv6 mld snooping vlan VLAN-LIST mrouter learn pim-dvmrp</b><br><b>No ipv6 mld snooping vlan VLAN-LIST mrouter learn pim-dvmrp</b> |  |           |             |                                      |   |          |  |
| Parameter   | <table border="1"> <thead> <tr> <th>parameter</th><th>description</th></tr> </thead> <tbody> <tr> <td>VLAN-LIST</td><td>Specifies VLAN ID list to set</td></tr> <tr> <td>IF-PORTS</td><td>Specifies a port list to set or remove</td></tr> </tbody> </table>   | parameter | description | VLAN-LIST                            | Specifies VLAN ID list to set                   | IF-PORTS | Specifies a port list to set or remove |
| parameter   | description  |           |             |                                      |   |          |  |
| VLAN-LIST   | Specifies VLAN ID list to set  |           |             |                                      |   |          |  |
| IF-PORTS  | Specifies a port list to set or remove   |           |             |                                      |   |          |  |
| Default   | Default is enable.   |           |             |                                      |   |          |  |
| Mode  | Global configuration.  |           |             |                                      |   |          |  |
| Usage   | <p>Use the <b>ipv6 mld snooping vlan mrouter learn pim-dvmrp</b> command to Enable learning router port by routing protocol packets such as PIM/PIMv2,DVMRP,MOSPF.<br/>Use the <b>no</b> form of this command to disable .<br/>You can verify settings by the <b>show ipv6 mld snooping vlan</b> command.</p>  |           |             |                                      |   |          |  |

---

|         |   |
|---------|---|
| Example | The following example specifies that Enable learning router port test:<br>SWITCH(config)# <b>ipv6 mld snooping vlan 2 mrouter learn pim-dvmrp</b> |
|---------|---|

| Command | command                            | description                              |
|---------|------------------------------------|--|
|         | <b>Show ipv6 mld snooping vlan</b> | verify the ipv6 mld snooping Information |

## 26.1.9 **ipv6 mld snooping vlan static-group**

Add a static group.

```
 ipv6 mld snooping vlan VLAN-LIST static-group group-address interfaces
GigabitEthernet|Aggregateport IF_PORTS
    no ipv6 mld snooping vlan VLAN-LIST static-group group-address interfaces
GigabitEthernet|Aggregateport IF_PORTS
```

| Parameter | parameter | description                            |
|-----------|-----------|--|
|           | Ip-addr   | Specifies multicast group ipv6 address |
|           | IF-PORTS  | Specifies a port list to set or remove |

|         |   |
|---------|---|
| Default | No static group by default.   |
| Mode    | Global configuration.   |
| Usage   | Use the <b>ipv6 mld snooping vlan static-group</b> command to add a static group. The static group will not learn other dynamic ports.If the dynamic group exist ,then the static group will overlap the dynamic group.The static group set to valid unless mld snooping vlan enable. |

Use the **no** form of this command to delete static group.If remove the last member of static group,the static group will be delete.

You can verify settings by the **show ipv6 mld snooping groups** command.

|         |  |
|---------|--|
| Example | The following example specifies that set ipv6 mld snooping static group test:<br><b>SWITCH(config)# ipv6 mld snooping vlan 1 static-group ff08::9 interfaces Aggregateport 0/6</b> |
|---------|--|

| Command | command                              | description             |
|---------|--------------------------------------|-------------------------|
|         | <b>Show ipv6 mld snooping groups</b> | verify the static group |

## 26.2 command related to display and monitoring

### 26.2.1 clear ipv6 mld snooping statistics

clear ipv6 mld statistics.

#### clear ipv6 mld snooping statistics

| Parameter | parameter | description                       |
|-----------|-----------|-----------------------------------|
|           | None      | Clear all igmp packets statistics |

|         |       |
|---------|-------|
| Default | None. |
|---------|-------|

|      |                  |
|------|------------------|
| Mode | Privileged EXEC. |
|------|------------------|

|       |   |
|-------|---|
| Usage | This command will clear all of the ipv6 mld packets statistics.<br>You can verify settings by the <b>show ipv6 mld snooping statistics</b> command. |
|-------|---|

|         |  |
|---------|--|
| Example | The following example specifies that show ipv6 mld snooping statistics test.<br><b>SWITCH#clear ipv6 mld snooping statistics</b><br><b>SWITCH#show ipv6 mld snooping</b> |
|---------|--|

```

Snooping          : Enabled
Report Suppression : Enabled
Operation Version   : v1
Forward Method     : mac
Unknown IPv6 Multicast Action : Flood

```

|                   |
|-------------------|
| Packet Statistics |
| Total RX : 0      |
| Valid RX : 0      |
| Invalid RX : 0    |

---

|                                 |   |   |
|---------------------------------|---|---|
| Other RX                        | : | 0 |
| Leave RX                        | : | 0 |
| Report RX                       | : | 0 |
| General Query RX                | : | 0 |
| Specail Group Query RX          | : | 0 |
| Specail Group & Source Query RX | : | 0 |
| Leave TX                        | : | 0 |
| Report TX                       | : | 0 |
| General Query TX                | : | 0 |
| Specail Group Query TX          | : | 0 |
| Specail Group & Source Query TX | : | 0 |

| Command | command                       | description                     |
|---------|-------------------------------|---------------------------------|
|         | <b>Show ipv6 mld snooping</b> | Verify ipv6 mld statistics info |

## 26.2.2 clear ipv6 mld snooping groups

clear mld snooping groups.

**clear ipv6 mld snooping groups [(dynamic|static)]**

| Parameter | parameter        | description                                      |
|-----------|------------------|--|
|           | None             | Clear ipv6 mld groups include dynamic and static |
|           | (dynamic static) | Ipv6 mld group is dynamic and static             |

|         |       |
|---------|-------|
| Default | None. |
|---------|-------|

|      |                  |
|------|------------------|
| Mode | Privileged EXEC. |
|------|------------------|

|       |  |
|-------|--|
| Usage | This command will clear the mld groups for dynamic or static or all of type.<br>You can verify settings by the <b>show ipv6 mld snooping groups</b> command. |
|-------|--|

|         |   |
|---------|---|
| Example | The following example specifies that show ipv6 mld snooping groups test.<br><b>SWITCH#clear ipv6 mld snooping groups</b><br><b>SWITCH#show ipv6 mld snooping groups</b> |
|---------|---|

| VLAN         |              | Group IP Address |              | Type |  | Life(Sec) |  | Port |

MLD Snooping immediate leave: enabled  
MLD Snooping automatic learning of multicast router ports: enabled

| command | description |
|---------|-------------|
|---------|-------------|

|         |                                    |                                      |
|---------|------------------------------------|--------------------------------------|
| Command | <b>Show ipv6 mld snooping vlan</b> | verify settings of mld snooping vlan |
|---------|------------------------------------|--------------------------------------|

## 26.2.5 show ipv6 mld snooping forward-all

Display mld snooping forward-all info.

**show ipv6 mld snooping forward-all [vlanVLAN-LIST]**

| Parameter | parameter   | description  |
|-----------|-------------|--|
|           | None        | Show all ipv6 mld snooping vlan forward-all info       |
|           | [VLAN-LIST] | Show specifies vlan ipv6 mld snooping forward-all info |

|         |   |
|---------|---|
| Default | Show all vlan ipv6 mld forward all info.. |
|---------|---|

|      |                  |
|------|------------------|
| Mode | Privileged EXEC. |
|------|------------------|

|       |   |
|-------|---|
| Usage | This command will display ipv6 mld snooping forward-all info. |
|-------|---|

|         |  |
|---------|--|
| Example | The following example specifies that show ipv6 mld snooping forward-all test.<br>SWITCH# <b>show ipv6 mld snooping forward-all</b> |
|---------|--|

```
MLD Snooping VLAN      : 1
MLD Snooping static port : None
MLD Snooping forbidden port : None
```

```
MLD Snooping VLAN      : 2
MLD Snooping static port : None
MLD Snooping forbidden port : None
```

```
MLD Snooping VLAN      : 3
MLD Snooping static port : None
MLD Snooping forbidden port : None
```

| Command | command                                   | description                                 |
|---------|---|---|
|         | <b>Show ipv6 mld snooping forward-all</b> | verify settings of mld snooping forward-all |

## 26.2.6 show ipv6 mld snooping groups

Display mld snooping groups info.

**show ipv6 mld snooping groups [counters|dynamic|static]**

| Parameter | parameter        | description  |
|-----------|------------------|--|
|           | None             | Show all ipv6 mld groups include dynamic and static info |
|           | Counters         | Show dynamic and static groups counters                  |
|           | (dynamic static) | Show dynamic or static igmp groups                       |

|         |  |
|---------|--|
| Default | None.  |
| Mode    | Privileged EXEC.   |
| Usage   | This command will display ipv6 mld snooping groups for dynamic or static or all of type. |

| Example  | The following example specifies that show ipv6 mld snooping groups test.<br>SWITCH# <b>show ipv6 mld snooping groups</b> |         |                  |       |           |      |   |         |         |     |       |   |          |         |     |       |   |           |         |     |       |   |                   |         |     |       |   |                   |         |     |       |

## 26.2.7 show ipv6 mld snooping router

Display mld snooping router info.

**show ipv6 mld snooping router [counters|dynamic|static]**

| Parameter | parameter        | description  |
|-----------|------------------|--|
|           | None             | Show all ipv6 mld router include dynamic and static info |
|           | (dynamic static) | Show dynamic or static mld router                        |

|         |       |
|---------|-------|
| Default | None. |
|---------|-------|

|      |                  |
|------|------------------|
| Mode | Privileged EXEC. |
|------|------------------|

|       |  |
|-------|--|
| Usage | This command will display ipv6 mld snooping router for dynamic or static or all of type. |
|-------|--|

|         |   |
|---------|---|
| Example | The following example specifies that show ipv6 mld snooping router test.<br><b>SWITCH#show ipv6 mld snooping router</b> |
|---------|---|

Dynamic Router Table  
 VID | Port | Expiry Time(Sec)  
 -----+-----+-----

# 27 Path detection

## 27.1 ping

Detect host is reachable or not.include ipv4 address、 ipv6 address and domain name.

**ping [HOSTNAME]**

| Parameter | parameter  | description    |
|-----------|------------|----------------|
|           | [HOSTNAME] | Host name info |

|         |       |
|---------|-------|
| Default | None. |
|---------|-------|

|      |                  |
|------|------------------|
| Mode | Privileged EXEC. |
|------|------------------|

|       |  |
|-------|--|
| Usage | This command will detect host is reachable or not. |
|-------|--|

|         |   |
|---------|---|
| Example | The following example specifies that ping test.<br><b>SWITCH#ping fe80::1104:72ba:d80d:3c99</b> |
|---------|---|

```
PING fe80::1104:72ba:d80d:3c99 (fe80::1104:72ba:d80d:3c99): 56 data bytes
64 bytes from fe80::1104:72ba:d80d:3c99: icmp6_seq=0 ttl=64 time=10.0 ms
64 bytes from fe80::1104:72ba:d80d:3c99: icmp6_seq=1 ttl=64 time=0.0 ms
64 bytes from fe80::1104:72ba:d80d:3c99: icmp6_seq=2 ttl=64 time=0.0 ms
64 bytes from fe80::1104:72ba:d80d:3c99: icmp6_seq=3 ttl=64 time=0.0 ms
```

| Command | command     | description   |
|---------|-------------|---|
|         | <b>Ping</b> | Add the host name after the command will check the host is reachable or not |

---

## 27.2 traceroute

Trace route to network hosts.and record the routing information to the host,include ipv4 address、  
ipv6 address and domain name.

**traceroute [HOSTNAME]**

| Parameter | parameter  | description    |
|-----------|------------|----------------|
|           | [HOSTNAME] | Host name info |

|         |       |
|---------|-------|
| Default | None. |
|---------|-------|

|      |                  |
|------|------------------|
| Mode | Privileged EXEC. |
|------|------------------|

|       |   |
|-------|---|
| Usage | This command will record the routing information to the host. |
|-------|---|

|         |  |
|---------|--|
| Example | The following example specifies that traceroute test.<br>SWITCH#traceroute www.baidu.com |
|---------|--|

| Command | command           | description   |
|---------|-------------------|---|
|         | <b>traceroute</b> | Add the host name after the command will<br>display the routing information to the host |

# 28 Access Control List

## 28.1 Configure commands

### 28.1.1 standard ip access-list

Configure the standard ip access-list .By a series of match rules, we can filter network data.

```
ip access-list standard { ACL-name}  
no ip access-list standard { ACL-name}
```

| Parameter | parameter | description               |
|-----------|-----------|---------------------------|
|           | ACL-name  | The name of the ACL (0-9) |

|         |      |
|---------|------|
| Default | Null |
|---------|------|

|      |                    |
|------|--------------------|
| Mode | Configuration mode |
|------|--------------------|

|       |                                   |
|-------|-----------------------------------|
| Usage | Configuration access control list |
|-------|-----------------------------------|

|         |                           |
|---------|---------------------------|
| Example | ip access-list standard 0 |
|---------|---------------------------|

| Command | command          | descriptio                               |
|---------|------------------|--|
|         | show access-list | Display access control list information. |

### 28.1.2 extended ip access-list

Configure the extended ip access-list .By a series of match rules, we can filter network data.

```
ip access-list extended{ ACL-name}  
no ip access-list extended { ACL-name}
```

| Parameter | parameter | description                 |
|-----------|-----------|-----------------------------|
|           | ACL-name  | The name of the ACL (10-19) |

|         |      |
|---------|------|
| Default | Null |
|---------|------|

|      |                    |
|------|--------------------|
| Mode | Configuration mode |
|------|--------------------|

|         |                                   |  |
|---------|-----------------------------------|--|
| Usage   | Configuration access control list |  |
| Example | ip access-list extended 10        |  |
| Command | command                           | description                              |
|         | <b>show access-list</b>           | Display access control list information. |

### 28.1.3 ACE configuration

Under the ip access-list, config the specific rules.

```
ip access-list {standard|extended} {0-9|10-19}
[0-9|deny|end|exit|hlep|no|permit]
```

| Parameter | parameter   | description  |
|-----------|---|--|
|           | 0-9   | Config ace number, optional, Default value is 0.           |
|           | deny  | Deny assignable data type , parameter has [any host sip]   |
|           | end   | Quit   |
|           | exit  | Back to Previous Level                                     |
|           | no  | Delete the rules   |
|           | permit  | Permit assignable data type , parameter has [any host sip] |
| Default   | Null  |  |
| Mode      | ACL configuration mode  |  |
| Usage     | Configuration ACE   |  |
| Example   | <pre>ip access-list standard 0     permit any</pre> <pre>ip access-list extended 10     permit ip any any</pre> |  |
| Command   | command   | description  |
|           | <b>show access-list</b>   | Display access control list information.                   |

---

## 28.1.4 standard ip access-list deny|permit

Under the standard ip access-list, config the deny or permit rules.

```
ip access-list standard {0-9}
[ace_id] {deny|permit} {any|host|sip}
ip access-list standard {0-9}
no {ace_id}
```

|           | parameter | description                           |
|-----------|-----------|---------------------------------------|
| Parameter | any       | any source IP address                 |
|           | host      | host IP address                       |
|           | sip       | assignable source IP address and mask |
|           | ace_id    | ACE number(0-9)                       |

|         |   |
|---------|---|
| Default | Null  |
| Mode    | ACL configuration mode                          |
| Usage   | Configuration ACE                               |
| Example | <pre>ip access-list standard 0 permit any</pre> |

| Command | command                 | description                              |
|---------|-------------------------|--|
|         | <b>show access-list</b> | Display access control list information. |

## 28.1.5 extended ip access-list deny|permit

Under the extended ip access-list, config the deny or permit rules.

**ip access-list extended {10-19}**

[ace\_id] {deny|permit} {ip|tcp|udp} {any|host|sip} [eq] {any|host|dip} [eq]

**ip access-list extended {10-19}**

**no {ace\_id}**

|           | parameter  | description                           |
|-----------|------------|---------------------------------------|
| Parameter | ip tcp udp | protocol type                         |
|           | any        | any source IP address                 |
|           | host       | host IP address                       |
|           | sip        | assignable source IP address and mask |
|           | dip        | assignable dest IP address and mask   |
|           | eq         | TCP/UDP port filtering                |
|           | ace_id     | ACE number(0-9)                       |

|         |      |
|---------|------|
| Default | Null |
|---------|------|

|      |                        |
|------|------------------------|
| Mode | ACL configuration mode |
|------|------------------------|

|       |                   |
|-------|-------------------|
| Usage | Configuration ACE |
|-------|-------------------|

|         |   |
|---------|---|
| Example | <b>ip access-list extended 10</b><br><b>    permit ip any any</b> |
|---------|---|

|         | command                 | description                              |
|---------|-------------------------|--|
| Command | <b>show access-list</b> | Display access control list information. |

## 28.1.6 ip access-list commit

Use this command, Will be ACL Apply to the interface. We can filter rx data.

```
interface GigabitEthernet {port_id}
    ip access-list {ACL-name} commit
interface GigabitEthernet {port_id}
    no ip access-list {ACL-name} commit
```

| Parameter | parameter | description         |
|-----------|-----------|---------------------|
|           | port_id   | Interface ID        |
| ACL-name  |           | The name of the ACL |

|         |      |
|---------|------|
| Default | Null |
|---------|------|

|      |                              |
|------|------------------------------|
| Mode | interface configuration mode |
|------|------------------------------|

|       |               |
|-------|---------------|
| Usage | Apply the ACL |
|-------|---------------|

|         |  |
|---------|--|
| Example | <b>interface GigabitEthernet 0/1</b><br><b>ip access-list 0 commit</b> |
|---------|--|

|         |      |
|---------|------|
| Command | Null |
|---------|------|

## 28.1.7 standard ipv6 access-list

Configure the standard ipv6 access-list .By a series of match rules, we can filter network ipv6 data.

```
ipv6 access-list standard { ACL-name}
no ipv6 access-list standard { ACL-name}
```

| Parameter | parameter | description                 |
|-----------|-----------|-----------------------------|
|           | ACL-name  | The name of the ACL (26-35) |

|         |      |
|---------|------|
| Default | Null |
|---------|------|

|      |                    |
|------|--------------------|
| Mode | Configuration mode |
|------|--------------------|

|       |                                   |
|-------|-----------------------------------|
| Usage | Configuration access control list |
|-------|-----------------------------------|

---

|         |                                     |  |
|---------|-------------------------------------|--|
| Example | <b>ipv6 access-list standard 26</b> |  |
|---------|-------------------------------------|--|

---

| Command | command                 | description                              |
|---------|-------------------------|--|
|         | <b>show access-list</b> | Display access control list information. |

---

## 28.1.8 extended ipv6 access-list

Configure the extended ipv6 access-list .By a series of match rules, we can filter network ipv6 data.

**ipv6 access-list extended{ ACL-name}**  
**no ipv6 access-list extended { ACL-name}**

| Parameter | parameter | description                 |
|-----------|-----------|-----------------------------|
|           | ACL-name  | The name of the ACL (36-45) |

---

|         |                                   |
|---------|-----------------------------------|
| Default | Null                              |
| Mode    | Configuration mode                |
| Usage   | Configuration access control list |

---

| Example                 | <b>ip access-list extended 36</b>  |         |             |                         |  |
|-------------------------|--|---------|-------------|-------------------------|--|
| Command                 | <table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <th style="width: 45%;">command</th> <th style="width: 55%;">description</th> </tr> <tr> <td style="text-align: center;"><b>show access-list</b></td><td>Display access control list information.</td></tr> </table> | command | description | <b>show access-list</b> | Display access control list information. |
| command                 | description  |         |             |                         |  |
| <b>show access-list</b> | Display access control list information.   |         |             |                         |  |

---

## 28.1.9 ipv6 ACE configuration

Under the ipv6 access-list,config the specific rules.

**ipv6 access-list {standard|extended} {26-35|36-45}**  
**[0-9|deny|end|exit|hlep|no|permit]**

| Parameter | parameter | description  |
|-----------|-----------|--|
|           | 0-9       | Config ace number, optional,Default value is 0.            |
|           | deny      | Deny assignable data type , parameter has [any host sip]   |
|           | end       | Quit   |
|           | exit      | Back to Previous Level                                     |
|           | no        | Delete the rules   |
|           | permit    | Permit assignable data type , parameter has [any host sip] |

---

| Default                 | Null   |         |             |                         |  |
|-------------------------|--|---------|-------------|-------------------------|--|
| Mode                    | ipv6 ACL configuration mode  |         |             |                         |  |
| Usage                   | Configuration ACE  |         |             |                         |  |
| Example                 | <pre> ipv6 access-list standard 26       permit any   ipv6 access-list extended 36       permit ip any any</pre>   |         |             |                         |  |
| Command                 | <table border="1"> <thead> <tr> <th>command</th><th>description</th></tr> </thead> <tbody> <tr> <td><b>show access-list</b></td><td>Display access control list information.</td></tr> </tbody> </table> | command | description | <b>show access-list</b> | Display access control list information. |
| command                 | description  |         |             |                         |  |
| <b>show access-list</b> | Display access control list information.   |         |             |                         |  |

### 28.1.10 standard ipv6 access-list deny|permit

Under the standard ip access-list, config the deny or permit rules.

| Parameter               | <b>ipv6 access-list standard {26-35}</b>   |         |             |                         |  |  |
|-------------------------|--|---------|-------------|-------------------------|--|--|
|                         | [ace_id] {deny permit} [any host sip]  |         |             |                         |  |  |
|                         | <b>ipv6 access-list standard {26-35}</b>   |         |             |                         |  |  |
|                         | <b>no {ace_id}</b>   |         |             |                         |  |  |
|                         |  |         |             |                         |  |  |
| Default                 | Null   |         |             |                         |  |  |
| Mode                    | ACL configuration mode   |         |             |                         |  |  |
| Usage                   | Configuration ACE  |         |             |                         |  |  |
| Example                 | <pre> ipv6 access-list standard 26       permit any</pre>  |         |             |                         |  |  |
| Command                 | <table border="1"> <thead> <tr> <th>command</th><th>description</th></tr> </thead> <tbody> <tr> <td><b>show access-list</b></td><td>Display access control list information.</td></tr> </tbody> </table> | command | description | <b>show access-list</b> | Display access control list information. |  |
| command                 | description  |         |             |                         |  |  |
| <b>show access-list</b> | Display access control list information.   |         |             |                         |  |  |

## 28.1.11 extended ipv6 access-list deny|permit

Under the extended ip access-list, config the deny or permit rules.

**ip access-list extended {36-45}**

[ace\_id] {deny|permit} {ip|tcp|udp} {any|host|sip} [eq] {any|host|dip} [eq]

**ip access-list extended {36-45}**

**no {ace\_id}**

|           | parameter  | description                           |
|-----------|------------|---------------------------------------|
| Parameter | ip tcp udp | protocol type                         |
|           | any        | any source IP address                 |
|           | host       | host IP address                       |
|           | sip        | assignable source IP address and mask |
|           | dip        | assignable dest IP address and mask   |
|           | eq         | TCP/UDP port filtering                |
|           | ace_id     | ACE number(0-9)                       |
| Default   | Null       |                                       |

Mode            ACL configuration mode

Usage          Configuration ACE

Example        **ipv6 access-list extended 36**  
**permit ip any any**

|         | command                 | description                              |
|---------|-------------------------|--|
| Command | <b>show access-list</b> | Display access control list information. |

## 28.1.12 ipv6 access-list commit

Use this command, Will be ipv6 ACL Apply to the interface. We can filter rx data.

**interface GigabitEthernet {port\_id}**

**ipv6 access-list {ACL-name} commit**

**interface GigabitEthernet {port\_id}**

**no ipv6 access-list {ACL-name} commit**

|           | parameter | description         |
|-----------|-----------|---------------------|
| Parameter | port_id   | Interface ID        |
|           | ACL-name  | The name of the ACL |

|         |   |
|---------|---|
| Default | Null  |
| Mode    | interface configuration mode  |
| Usage   | Apply the ACL   |
| Example | <b>interface GigabitEthernet 0/1<br/>ipv6 access-list 26 commit</b> |

  

|         |      |
|---------|------|
| Command | Null |
|---------|------|

### 28.1.13 mac access-list extended

Configure the MAC access-list .By a series of match rules, we can filter network data.

```
mac access-list extended { ACL-name}  
no mac access-list extended { ACL-name}
```

| Parameter | parameter | description                 |
|-----------|-----------|-----------------------------|
|           | ACL-name  | The name of the ACL (20-25) |

|         |                                    |
|---------|------------------------------------|
| Default | Null                               |
| Mode    | Configuration mode                 |
| Usage   | Configuration access control list  |
| Example | <b>mac access-list extended 20</b> |

| Command | command                 | descriptio                               |
|---------|-------------------------|--|
|         | <b>show access-list</b> | Display access control list information. |

### 28.1.14 mac ACE configuration

Under the mac access-list,config the specific rules.

---

**mac access-list extended {20-25}**

[0-9|deny|end|exit|hlep|no|permit]

| Parameter | parameter | description  |
|-----------|-----------|--|
|           | 0-9       | Config ace number, optional, Default value is 0.           |
|           | deny      | Deny assignable data type , parameter has [any host sip]   |
|           | end       | Quit   |
|           | exit      | Back to Previous Level                                     |
|           | no        | Delete the rules   |
|           | permit    | Permit assignable data type , parameter has [any host sip] |

---

Default Null

Mode ACL configuration mode

Usage Configuration ACE

Example  

```
mac access-list extended 20
    permit any any
```

| Command | command                 | description                              |
|---------|-------------------------|--|
|         | <b>show access-list</b> | Display access control list information. |

---

### 28.1.16 mac access-list deny|permit

Under the extended mac access-list, config the deny or permit rules.

**mac access-list extended {20-25}**

[ace\_id] {deny|permit} {any|host} {any|host} [ethertype]

**mac access-list extended {20-25}**

no {ace\_id}

| Parameter | parameter | description                 |
|-----------|-----------|-----------------------------|
|           | any       | any source/dest mac address |
|           | host      | host mac address            |
|           | ethertype | etherent frame type         |
|           | ace_id    |                             |

---

Default Null

---

| Mode    | ACL configuration mode                                  |  |
|---------|---|--|
| Usage   | Configuration ACE                                       |  |
| Example | <pre>ip access-list extended 10 permit ip any any</pre> |  |
| Command | command   | description                              |
|         | <b>show access-list</b>                                 | Display access control list information. |

## 28.1.17 mac access-list commit

Use this command, Will be mac ACL Apply to the interface. We can filter rx data.

```
interface GigabitEthernet {port_id}
    mac access-list {ACL-name} commit
interface GigabitEthernet {port_id}
    no mac access-list {ACL-name} commit
```

| Parameter | parameter  | description         |
|-----------|--|---------------------|
|           | port_id  | Interface ID        |
|           | ACL-name   | The name of the ACL |
| Default   | Null   |                     |
| Mode      | interface configuration mode   |                     |
| Usage     | Apply the ACL  |                     |
| Example   | <pre>interface GigabitEthernet 0/1     mac access-list 20 commit</pre> |                     |
| Command   | Null   |                     |

---

## 28.2 display commands

### 28.2.1 show access-list

show access-list information.

#### show access-lists

| Parameter | parameter                | description                              |
|-----------|--------------------------|--|
|           | <b>show access-lists</b> | Display access control list information. |

Default Null

Mode Privileged mode

Usage display access control list information.

Example show access-list

```
mac access-list extended 20  
 0 permit any any
```

```
ip access-list standard 0  
 0 permit any
```

```
ip access-list extended 10  
 0 permit ip any any
```

```
ipv6 access-list standard 26  
 0 permit any
```

```
ipv6 access-list extended 36
```

Command Null

## 29 802.1X

If you want this function to take effect, please configure the 802.1X server of RADIUS first.

## 29.1 Configure commands

### 29.1.1 authentication dot1x

global switches, If you want to use this function,you must config this command.

**authentication dot1x**  
**no authentication dot1x**

| Parameter | parameter | description |
|-----------|-----------|-------------|
|           | Null      | Null        |

Default Null

Mode Configuration mode

Usage Configuration 802.1X

Example authentication dot1x

| Command | command                    | descriptio                  |
|---------|----------------------------|-----------------------------|
|         | <b>show authentication</b> | display 802.1x information. |

### 29.1.2 authentication dot1x

Under the interface,we use this command open port's 802.1X fuction.

**interface GigabitEthernet {port\_id}**  
**authentication dot1x**  
**interface GigabitEthernet {port\_id}**  
**no authentication dot1x**

| Parameter | parameter | description  |
|-----------|-----------|--------------|
|           | port_id   | Interface ID |

Default Null

Mode interface configuration mode

---

| Usage  | Configuration 802.1X   |         |             |  |                                  |
|--|--|---------|-------------|--|----------------------------------|
| Example  | interface GigabitEthernet 0/3<br>authentication dot1x  |         |             |  |                                  |
| Command  | <table border="1"> <thead> <tr> <th>command</th><th>description</th></tr> </thead> <tbody> <tr> <td><b>show authentication interface</b><br/><b>GigabitEthernet port_id</b></td><td>display 802.1x port information.</td></tr> </tbody> </table> | command | description | <b>show authentication interface</b><br><b>GigabitEthernet port_id</b> | display 802.1x port information. |
| command  | description  |         |             |  |                                  |
| <b>show authentication interface</b><br><b>GigabitEthernet port_id</b> | display 802.1x port information.   |         |             |  |                                  |

### 29.1.3 authentication port-control

Under the interface,we use this command config 802.1X port-control mode.

```
interface GigabitEthernet {port_id}
authentication port-control {auto|force-auth|force-unauth}
interface GigabitEthernet {port_id}
no authentication port-control
```

| Parameter | parameter    | description       |
|-----------|--------------|-------------------|
|           | port_id      | Interface ID      |
|           | auto         | auto mode         |
|           | force-auth   | force-auth mode   |
|           | force-unauth | force-unauth mode |

|         |   |
|---------|---|
| Default | Null  |
| Mode    | interface configuration mode                                      |
| Usage   | Configuration 802.1X port-control mode.                           |
| Example | interface GigabitEthernet 0/3<br>authentication port-control auto |

| Command | command  | description                      |
|---------|--|----------------------------------|
|         | <b>show authentication interface</b><br><b>GigabitEthernet port_id</b> | display 802.1x port information. |

### 29.1.4 authentication host-mode

Under the interface,we use this command config 802.1X host-mode.

---

```

interface GigabitEthernet {port_id}
  authentication host-mode {single-host|multi-host|multi-auth}
interface GigabitEthernet {port_id}
  no authentication host-mode

```

|           | parameter   | description                  |
|-----------|-------------|------------------------------|
| Parameter | port_id     | Interface ID                 |
|           | single-host | Single Host Mode             |
|           | multi-host  | Multiple Host Mode           |
|           | multi-auth  | Multiple Authentication Mode |

|         |  |
|---------|--|
| Default | multi-auth   |
| Mode    | interface configuration mode   |
| Usage   | Configuration 802.1X port-control mode.                              |
| Example | interface GigabitEthernet 0/3<br>authentication host-mode multi-host |

| Command | command  | description                      |
|---------|--|----------------------------------|
|         | <b>show authentication interface</b><br><b>GigabitEthernet port_id</b> | display 802.1x port information. |

## 29.2 Display commands

### 29.2.1 show authentication

show 802.1X information.

**show authentication {interfaces GigabitEthernet port\_id}**

|           | parameter | description     |
|-----------|-----------|-----------------|
| Parameter | port_id   | Interface ID    |
|           | Default   | Null            |
|           | Mode      | Privileged mode |
|           |           |                 |

---

|       |                             |
|-------|-----------------------------|
| Usage | display 802.1X information. |
|-------|-----------------------------|

|         |   |
|---------|---|
| Example | show authentication<br>Autentication dot1x state : enabled<br>Autentication mac state : disabled<br>Autentication web state : disabled<br>Guest VLAN : disabled |
|---------|---|

Show authentication interface GigabitEthernet0/3  
Interface Configurations

Interface GigabitEthernet0/3  
Admin Control : force-unauth  
Host Mode : multi-host  
Type dot1x State : enabled  
Type mac State : disabled  
Type web State : disabled  
Type Order : dot1x  
MAC/WEB Method Order : radius  
Guest VLAN : disabled  
Reauthentication : disabled  
Max Hosts : 256

|         |      |
|---------|------|
| Command | Null |
|---------|------|

---

# 30 AAA

## 30.1 Configure commands

### 30.1.1 radius host

Configure all the parameters that switch connnect to the radius sever .

```
radius host {host_name} [auth-port] {port_id} [key] {key} [priority] {pri_value} [retransmit]
{retransmit_times} [timeout] {timeout_vlaue} [type] {auth_type}
no radius host {ip_addr}
```

|           | parameter        | description   |
|-----------|------------------|---|
| Parameter | host_name        | radius sever ip address or domain name                      |
|           | port_id          | TCP/UDP port number,default is 1812.(0-65535)               |
|           | key              | Radius server key   |
|           | pri_value        | priority vlaue,(1-65534)                                    |
|           | retransmit_times | The number of retransmit,default is 3.(1-10)                |
|           | timeout_vlaue    | Timeout value in seconds to wait for server to reply.(1-30) |
|           | auth_type        | Usage type.[802.1x login all]                               |

|         |  |
|---------|--|
| Default | port_id:1812<br>retransmit_times:3   |
| Mode    | Configuration mode   |
| Usage   | Configuration radius   |
| Example | radius host 192.168.100.1 auth-port 1812 key public priority 1 retransmit 1 timeout 1 type all |

| Command | command            | descriptio                  |
|---------|--------------------|-----------------------------|
|         | <b>show radius</b> | display radius information. |

### 30.1.2 tacacs host

Configure all the parameters that switch connect to the tacacs sever .

**tacacs host {host\_name} [port] {port\_id} [key] {key} [priority] {pri\_value} [timeout] {timeout\_vlaue}**  
**no tacacs host {ip\_addr}**

|           | parameter     | description   |
|-----------|---------------|---|
| Parameter | host_name     | Tacacs sever ip address or domain name                      |
|           | port_id       | TCP/UDP port number,default is 49.(0-65535)                 |
|           | key           | Tacacs server key   |
|           | pri_value     | priority vlaue,(1-65534)                                    |
|           | timeout_vlaue | Timeout value in seconds to wait for server to reply.(1-30) |

|         |  |
|---------|--|
| Default | port_id:49   |
| Mode    | Configuration mode   |
| Usage   | Configuration tacacs   |
| Example | tacacs host 192.168.100.1 port 49 key public priority 1 timeout 30 |

| Command | command            | descriptio                  |
|---------|--------------------|-----------------------------|
|         | <b>show tacacs</b> | display tacacs information. |

### 30.1.3 aaa authentication enable

Configure eable authentication method.

**aaa authentication {enable} {list\_name} {auth\_method\_list}**  
**no aaa authentication {enable} {list\_name}**

|           | parameter        | description   |
|-----------|------------------|---|
| Parameter | list_name        | Auth Method List Name   |
|           | auth_method_list | Enable Authentication Method List.<br>[radius tacacs+ enable] |

|         |  |
|---------|--|
| Default | Null   |
| Mode    | Configuration mode                                 |
| Usage   | Configure eable authentication method.             |
| Example | aaa authentication enable Xn enable tacacs+ radius |

  

| Command | command                                     | descriptio                                 |
|---------|---|--|
|         | <b>show aaa authentication enable lists</b> | display enable authentication information. |

### 30.1.4 aaa authentication login

Configure login authentication method.login include console,telnet and SSH.

**aaa authentication {login} {list\_name} {auth\_method\_list}**  
**no aaa authentication {login} {list\_name}**

| Parameter        | parameter | description  |
|------------------|-----------|--|
|                  | list_name | Auth Method List Name  |
| auth_method_list |           | Login Authentication Method List.<br>[radius tacacs+ locaol] |

| Default                                    | Null   |         |            |  |   |
|--|--|---------|------------|--|---|
| Mode                                       | Configuration mode   |         |            |  |   |
| Usage                                      | Configure login authentication method.   |         |            |  |   |
| Example                                    | aaa authentication login Xn local radius tacacs+   |         |            |  |   |
| Command                                    | <table border="1"> <tr> <th>command</th> <th>descriptio</th> </tr> <tr> <td><b>show aaa authentication login lists</b></td> <td>display login authentication information.</td></tr> </table> | command | descriptio | <b>show aaa authentication login lists</b> | display login authentication information. |
| command                                    | descriptio   |         |            |  |   |
| <b>show aaa authentication login lists</b> | display login authentication information.  |         |            |  |   |

### 30.1.5 line console

If you want to login by console and need AAA authentication,you must config this command.

**line console**  
**login authentication {Login\_auth\_list\_name}**  
**enable authentication {enable\_auth\_list\_name}**

---

```
line console
no login authentication
no enable authentication
```

|           | parameter             | description                  |
|-----------|-----------------------|------------------------------|
| Parameter | Login_auth_list_name  | Login auth Method List Name  |
|           | enable_auth_list_name | Enable auth Method List Name |

Default Null

Mode Configuration mode

Usage Configure login authentication method.

Example  
line console  
login authentication Xn  
enable authentication Xn

| Command | command         | descriptio                                |
|---------|-----------------|---|
|         | show line lists | display login authentication information. |

### 30.1.6 line telnet

If you want to login by telnet and need AAA authentication,you must config this command.

```
line telnet
login authentication {Login_auth_list_name}
enable authentication {enable_auth_list_name}
line telnet
no login authentication
no enable authentication
```

|           | parameter             | description                  |
|-----------|-----------------------|------------------------------|
| Parameter | Login_auth_list_name  | Login auth Method List Name  |
|           | enable_auth_list_name | Enable auth Method List Name |

Default Null

Mode Configuration mode

Usage Configure telnet authentication method.

---

Example

```
line telnet
  login authentication Xn
  enable authentication Xn
```

Command

|  | command                | description                                |
|--|------------------------|--|
|  | <b>show line lists</b> | display telnet authentication information. |

---

### 30.1.7 line ssh

If you want to login by ssh and need AAA authentication,you must config this command.

**line ssh****login authentication {Login\_auth\_list\_name}****enable authentication {enable\_auth\_list\_name}****line ssh****no login authentication****no enable authentication**

|           | parameter             | description                  |
|-----------|-----------------------|------------------------------|
| Parameter | Login_auth_list_name  | Login auth Method List Name  |
|           | enable_auth_list_name | Enable auth Method List Name |

|         |      |
|---------|------|
| Default | Null |
|---------|------|

|      |                    |
|------|--------------------|
| Mode | Configuration mode |
|------|--------------------|

|       |                                      |
|-------|--------------------------------------|
| Usage | Configure ssh authentication method. |
|-------|--------------------------------------|

|         |   |
|---------|---|
| Example | line ssh<br>login authentication Xn<br>enable authentication Xn |
|---------|---|

| Command | command                | descriptio                              |
|---------|------------------------|---|
|         | <b>show line lists</b> | display ssh authentication information. |

---

## 30.2 Display commands

### 30.2.1 show radius

show radius information.

#### show radius

| Parameter | parameter   | description |
|-----------|---|-------------|
| Parameter | Null  | Null        |
| Default   | Null  |             |
| Mode      | Privileged mode   |             |
| Usage     | display radius information.   |             |
| Example   | show radius<br>Prio   IP Address   Auth-Port  Retries  Timeout  Type   Key<br>-----+-----+-----+-----+-----+-----+<br>1   192.168.100.1   1812   1   1   All   public |             |
| Command   | Null  |             |

### 30.2.2 show tacacs

show tacacs information.

#### show radius

| Parameter | parameter   | description |
|-----------|---|-------------|
| Parameter | Null  | Null        |
| Default   | Null  |             |
| Mode      | Privileged mode   |             |
| Usage     | display tacacs information.   |             |
| Example   | show tacacs<br>Prio   Timeout   IP Address   Port   Key<br>-----+-----+-----+-----+<br>1   30   192.168.100.1   49   public |             |

---

|         |      |
|---------|------|
| Command | Null |
|---------|------|

### 30.2.4 show aaa authentication enable list

show aaa authentication information.

#### show aaa authentication enable list

| Parameter | parameter | description |
|-----------|-----------|-------------|
|           | Null      | Null        |

|         |      |
|---------|------|
| Default | Null |
|---------|------|

|      |                 |
|------|-----------------|
| Mode | Privileged mode |
|------|-----------------|

|       |   |
|-------|---|
| Usage | display aaa authentication information. |
|-------|---|

|         |   |
|---------|---|
| Example | show aaa authentication enable list<br>Enable List Name Authentication Method List<br>----- -----<br>default   enable<br>Xn   enable tacacs+ radius |
|---------|---|

|         |      |
|---------|------|
| Command | Null |
|---------|------|

### 30.2.2 show aaa authentication login list

show aaa authentication information.

#### show aaa authentication login list

| Parameter | parameter | description |
|-----------|-----------|-------------|
|           | Null      | Null        |

|         |      |
|---------|------|
| Default | Null |
|---------|------|

|      |                 |
|------|-----------------|
| Mode | Privileged mode |
|------|-----------------|

|         |  |
|---------|--|
| Usage   | display aaa authentication information..   |
| Example | <pre>show aaa authentication login lists   Login List Name  Authentication Method List   ----- -----     default   local     Xn       local radius tacacs+</pre> |
| Command | Null   |

## 31 SSH

### 31.1 Configure commands

#### 31.1.1 ip ssh

enable ssh function

**ip ssh [all|v1|v2]**  
**no ip ssh [all|v1|v2]**

|           | parameter            | description        |
|-----------|----------------------|--------------------|
| Parameter | [all v1 v2]          | ssh version number |
| Default   | Null                 |                    |
| Mode      | Configuration mode   |                    |
| Usage     | Configuration radius |                    |
| Example   | ip ssh               |                    |
| Command   | Null                 |                    |

## 32 SSL

---

## 32.1 Configure commands

### 32.1.1 ssl

generate ssl digital certificate

#### ssl

| Parameter | parameter                | description |
|-----------|--------------------------|-------------|
| Parameter | Null                     | Null        |
| Default   | Null                     |             |
| Mode      | Privileged mode          |             |
| Usage     | generate new certificate |             |
| Example   | ssl                      |             |
| Command   | Null                     |             |

### 32.1.2 ssl replace

Make the new ssl digital certificate work.

#### ssl replace

|           |   |
|-----------|---|
| Parameter |   |
| Default   | Null                                      |
| Mode      | Privileged mode                           |
| Usage     | Make the new ssl digital certificate work |

---

|         |             |
|---------|-------------|
| Example | ssl replace |
|---------|-------------|

|         |      |
|---------|------|
| Command | Null |
|---------|------|

## 33 Qos

### 33.1 Configure commands

#### 33.1.1 qos trust

Config qos classify mode.

**qos trust {classify\_mode}**  
**no qos trust**

| Parameter | parameter     | description                   |
|-----------|---------------|-------------------------------|
|           | classify_mode | Qos Classify mode. [cos dscp] |

|         |      |
|---------|------|
| Default | Null |
|---------|------|

|      |             |
|------|-------------|
| Mode | config mode |
|------|-------------|

|       |                          |
|-------|--------------------------|
| Usage | config qos classify mode |
|-------|--------------------------|

|         |                      |
|---------|----------------------|
| Example | qos queue trust dscp |
|---------|----------------------|

| Command | command  | descriptio               |
|---------|----------|--------------------------|
|         | show qos | display qos information. |

#### 33.1.2 qos queue schedule

Config qos schedule algorithm.

**qos queue schedule {schedule\_mode}**

| Parameter | parameter     | description                        |
|-----------|---------------|------------------------------------|
|           | schedule_mode | Qos schedule mode. [sp wrr hybird] |

---

|         |                               |
|---------|-------------------------------|
| Default | Null                          |
| Mode    | config mode                   |
| Usage   | config qos schedule algorithm |
| Example | qos queue schedule wrr        |

| Command | command                  | descriptio                     |
|---------|--------------------------|--------------------------------|
|         | <b>show qos queueing</b> | display qos queue information. |

### 33.1.3 qos map cos-queue

Config qos queue mapping relationship.

**qos map cos-queue {cos\_value} to {queue\_num}**

| Parameter | parameter | description       |
|-----------|-----------|-------------------|
|           | cos_value | Cos value.        |
| queue_num |           | Queue number(1-8) |

|         |                                       |
|---------|---------------------------------------|
| Default | Null                                  |
| Mode    | config mode                           |
| Usage   | config qos queue mapping relationship |
| Example | qos map cos-queue 1 to 1              |

| Command | command                       | descriptio                   |
|---------|-------------------------------|------------------------------|
|         | <b>show qos map cos-queue</b> | display qos map information. |

### 33.1.4 qos map dscp-queue

Config qos queue mapping relationship.

**qos map dscp-queue {dscp\_value} to {queue\_num}**

|           | parameter                             | description       |
|-----------|---------------------------------------|-------------------|
| Parameter | dscp_value                            | DSCP value.       |
|           | queue_num                             | Queue number(1-8) |
| Default   | Null                                  |                   |
| Mode      | config mode                           |                   |
| Usage     | config qos queue mapping relationship |                   |
| Example   | qos map dscp-queue 1 to 8             |                   |

|         | command                 | descriptio                   |
|---------|-------------------------|------------------------------|
| Command | show qos map dscp-queue | display qos map information. |

### 33.1.5 qos map weight

When you use WRR mode,you need config every queues weight value.you must use this command.

#### **qos map weight {weight\_values}**

|           | parameter                               | description           |
|-----------|---|-----------------------|
| Parameter | weight_values                           | weight_values.(1-127) |
|           | Default                                 | Null                  |
| Mode      | config mode                             |                       |
| Usage     | config qos queue weight.                |                       |
| Example   | qos queue weight 1 1 1 50 50 50 100 100 |                       |

|         | command               | descriptio                     |
|---------|-----------------------|--------------------------------|
| Command | show qos map queueing | display qos queue information. |

---

### 33.1.6 qos queue strict-priority-num

When you use hybird mode,you need config SP schedule queue's number.you must use this command.

#### **qos queue strict-priority-num {SP\_num}**

| Parameter | parameter     | description           |
|-----------|---------------|-----------------------|
|           | weight_values | weight_values.(1-127) |

Default Null

Mode config mode

Usage config qos queue weight.

Example qos queue weight 1 1 1 50 50 50 100 100

Command Null

## 33.2 Display commands

### 33.2.1 show qos

show qos information.

#### **show qos**

| Parameter | parameter | description |
|-----------|-----------|-------------|
|           | Null      | Null        |

  

|         |                 |
|---------|-----------------|
| Default | Null            |
| Mode    | Privileged mode |

  

|       |                          |
|-------|--------------------------|
| Usage | display qos information. |
|-------|--------------------------|

---

|         |  |
|---------|--|
| Example | show qos<br>QoS Mode: enable<br>Basic trust: cos |
| Command | Null   |

### 33.2.2 show qos queueing

show qos queue information.

#### show qos queueing

| Parameter | parameter   | description |
|-----------|---|-------------|
| Parameter | Null  | Null        |
| Default   | Null  |             |
| Mode      | Privileged mode   |             |
| Usage     | display qos queueing information.   |             |
| Example   | show qos queueing<br>queue Schedule Alg: hybrid<br>qid-weights Ef - Priority<br>1 - 1 dis- N/A<br>2 - 2 dis- N/A<br>3 - 3 dis- N/A<br>4 - 4 dis- N/A<br>5 - 5 dis- N/A<br>6 - 6 dis- N/A<br>7 - 10 dis- N/A<br>8 - N/A ena- 8 |             |
| Command   | Null  |             |

### 33.2.3 show qos map cos-queue

show qos queue information.

#### show qos map cos-queue

|           | parameter                    | description  |
|-----------|------------------------------|--|
| Parameter | Null                         | Null   |
| Default   | Null                         |  |
| Mode      | Privileged mode              |  |
| Usage     | display qos map information. |  |
| Example   | show qos map cos-queue       | <pre>CoS to Queue mappings COS 0 1 2 3 4 5 6 7 ----- Queue 2 1 1 2 3 3 4 4</pre> |
| Command   | Null                         |  |

### 33.2.4 show qos map dscp-queue

show qos queue information.

#### show qos map dscp-queue

|           | parameter                    | description   |
|-----------|------------------------------|---|
| Parameter | Null                         | Null  |
| Default   | Null                         |   |
| Mode      | Privileged mode              |   |
| Usage     | display qos map information. |   |
| Example   | show qos map dscp-queue      | <pre>DSCP to Queue mappings d1: d2 0 1 2 3 4 5 6 7 8 9 ----- 0: 8 8 8 8 8 2 2 2 2 1: 2 2 2 2 2 2 2 2 2 2: 2 2 2 2 2 2 2 2 2</pre> |

---

3: 2 2 2 2 2 2 2 2 2  
4: 2 2 2 2 2 2 2 2 2  
5: 2 2 2 2 2 2 2 2 2

# 34 POE commands

## 34.1 configure command

### 34.1.1 Poe enable

**Enable the power supply capability of the POE port**

**poe enable**

**no poe enable**

| Parameter | Parameter            | description   |
|-----------|----------------------|---|
|           | <b>poe enable</b>    | Enable POE power supply function, the default is on |
|           | <b>no poe enable</b> | Turn off POE power supply                           |

|         |                         |
|---------|-------------------------|
| Default | Enable POE power supply |
|---------|-------------------------|

|      |                              |
|------|------------------------------|
| Mode | Interface configuration mode |
|------|------------------------------|

|       |  |
|-------|--|
| Usage | Use this command to enable / disable the remote power supply capability of the port. |
|-------|--|

Example

```
SWITCH(config-if-GigabitEthernet0/1)# poe enable  
SWITCH(config-if-GigabitEthernet0/1)# no poe enable
```

| Command | command                                  | description   |
|---------|--|---|
|         | <b>show poe interfaces configuration</b> | View the configuration information of current interface POE |

## 34.1.2 poe mode

Configure the power management mode of the POE system

**poe mode auto**

**poe mode energy-saving**

**poe mode static**

| Parameter | Parameter     | description  |
|-----------|---------------|--|
| Parameter | auto          | Set the power management mode to automatic mode, which is the default mode for POE devices     |
|           | energy-saving | Set the power management mode to energy saving mode, which is an optional mode for POE devices |
|           | static        | Set the power management mode to static mode, which is an optional mode for POE devices        |

Default      energy-saving.

Mode      Global configuration mode

Usage      Execute the following command to set the system power management mode

```
SWITCH(config)# poe mode auto  
SWITCH(config)# poe mode energy-saving  
SWITCH(config)# poe mode static
```

Example

| Command | command                     | description                                    |
|---------|-----------------------------|--|
| Command | <b>show poe powersupply</b> | View the poe system configuration information. |

---

### 34.1.3 poe max-power

Set the system maximum power.

**poe max-power**  
**no poe max-power**

| Parameter | Parameter  | description                                 |
|-----------|------------|---|
| Parameter | <b>int</b> | Maximum power in the range <6,11,20,32,35W> |

Default      35W

Mode      Interface configuration mode

Usage      Use this command to configure the maximum power of the port.

Example  
SWITCH(config)# interface GigabitEthernet 0/1  
SWITCH(config-if-GigabitEthernet0/1)# poe max-power 20

| Command | command                                  | description                                       |
|---------|--|---|
| Command | <b>show poe interfaces configuration</b> | View the poe interface configuration information. |

---

### 34.1.4 poe alloc-power

Set the system allocation power.

**poe alloc-power**  
**no poe alloc-power**

| Parameter | Parameter  | description                                    |
|-----------|------------|--|
| Parameter | <b>int</b> | Allocation power in the range <6,11,20,32,35W> |

Default      35W

Mode      Interface configuration mode

Usage      Use this command to configure the allocation power of the port in static mode.

Example  
SWITCH(config)# interface GigabitEthernet 0/1  
SWITCH(config-if-GigabitEthernet0/1)# poe alloc-power 20

| Command | command                                  | description                                       |
|---------|--|---|
|         | <b>show poe interfaces configuration</b> | View the poe interface configuration information. |

---

### 34.1.5 poe timer enable

**enable the POE timer**  
**poe timer enable**  
**no poe timer enable**

| Parameter | Parameter                  | description       |
|-----------|----------------------------|-------------------|
|           | <b>poe timer enable</b>    | Enable POE timer  |
|           | <b>no poe timer enable</b> | Disable POE timer |

**Default** disable POE timer

**Mode** Global configuration mode

**Usage** Use this command to enable / disable the remote power supply capability of the port.

**Example**

```
SWITCH(config)# poe timer enable  
SWITCH(config)# no poe timer enable
```

| Command | command               | description   |
|---------|-----------------------|---|
|         | <b>show poe timer</b> | View the configuration information of current interface POE timer |

## 34.1.6 poe timer configuration

Set the poe timer mode

| Parameter | Parameter       | description                        |
|-----------|-----------------|------------------------------------|
|           | <b>absolute</b> | Set poe power to the absolute time |
|           | <b>periodic</b> | Set the poe power cycle time       |

Default null

Mode Interface configuration mode

Usage Use the command to set the poe power supply time

Example

```
SWITCH(config)# poe timer enable  
SWITCH(config)# interface GigabitEthernet 0/5  
SWITCH(config-if-GigabitEthernet0/5)# poe timer periodic everyday 8:30 to 19:30  
mon to wed  
SWITCH(config-if-GigabitEthernet0/5)# poe timer absolute start 08:30 jul 25 2017 stop  
18:30 sep 30 2017
```

| Command | command               | description   |
|---------|-----------------------|---|
|         | <b>show poe timer</b> | View the configuration information of current interface POE timer information |

---

## 34.2 Display relevant commands

### 34.2.1 show poe interface

View the POE configuration and status information for the specified port.

**show poe interface gigabitEthernet port-id**

| Parameter | Parameter | description                                    |
|-----------|-----------|--|
|           | port-id   | Allocation power in the range <6,11,20,32,35W> |

Default -

Mode Privilege configuration mode.

Usage Execute this command to view the POE status of the specified port.

Example

```
SWITCH# show poe interfaces GigabitEthernet 0/1
Interface : gi0/1
Pd Description :
Power control : Normal
Power status : Detecting
Max power : 35 W
Allocate power : 35 W
Current power : 0 W
Average power : 0 W
Peak power : 0 W
Voltage : 52.908 V
Current : 0 mA
PD class : NoPd
Trouble cause : None
Trouble Recover Mode : auto
Power management : Energy-saving
SWITCH#
```

## 34.2.2 show poe interfaces

View the PoE status or configuration of all ports

**show poe interfaces status**

**show poe interfaces configuration**

| Parameter | Parameter | description |
|-----------|-----------|-------------|
| -         | -         |             |

Default -

Mode Privilege configuration mode.

Usage Execute this command to view the POE status or configuration of all ports.

```
SWITCH# show poe interfaces status
```

| Interface | Power Control | Power Status | Curr Power | Avg Power | Peak Power | Curr Current | Trouble Cause | PD Class | Port Voltage |
|-----------|---------------|--------------|------------|-----------|------------|--------------|---------------|----------|--------------|
|-----------|---------------|--------------|------------|-----------|------------|--------------|---------------|----------|--------------|

Example

|       |        |           |    |    |    |     |   |     |    |
|-------|--------|-----------|----|----|----|-----|---|-----|----|
| gi0/1 | Normal | Detecting | 0W | 0W | 0W | 0mA | 0 | N/A | 0V |
| gi0/2 | Normal | Detecting | 0W | 0W | 0W | 0mA | 0 | N/A | 0V |
| gi0/3 | Normal | Detecting | 0W | 0W | 0W | 0mA | 0 | N/A | 0V |
| gi0/4 | Normal | Detecting | 0W | 0W | 0W | 0mA | 0 | N/A | 0V |
| gi0/5 | Normal | Detecting | 0W | 0W | 0W | 0mA | 0 | N/A | 0V |
| gi0/6 | Normal | Detecting | 0W | 0W | 0W | 0mA | 0 | N/A | 0V |
| gi0/7 | Normal | Detecting | 0W | 0W | 0W | 0mA | 0 | N/A | 0V |
| gi0/8 | Normal | Detecting | 0W | 0W | 0W | 0mA | 0 | N/A | 0V |

```
SWITCH#
```

---

### 34.2.3 show poe powersupply

View the current power state of the POE system.  
**show poe powersupply**

| Parameter | Parameter | description |
|-----------|-----------|-------------|
| Parameter | -         | -           |

|         |   |
|---------|---|
| Default | - |
|---------|---|

|      |                               |
|------|-------------------------------|
| Mode | Privilege configuration mode. |
|------|-------------------------------|

|       |   |
|-------|---|
| Usage | Execute this command to view the power supply status of the current POE system. |
|-------|---|

Example      SWITCH# show poe powersupply  
Powerring Port List :  
Power Management Method : Energy-saving  
Poe uninterruptible power : Disable  
System Total Power : 70 W  
Power Consumption : 0 W  
Available power : 70 W [100%]

---

### 34.2.4 show poe timer

View the poe timer.

**show poe timer**

| Parameter | Parameter | description |
|-----------|-----------|-------------|
| Parameter | -         | -           |

|         |   |
|---------|---|
| Default | - |
|---------|---|

|      |                               |
|------|-------------------------------|
| Mode | Privilege configuration mode. |
|------|-------------------------------|

|       |  |
|-------|--|
| Usage | Execute this command to view the current poe timer information |
|-------|--|

```
SWITCH# show poe timer
  PORT | Timer mode| Start timer | Stop timer
-----+-----+-----+
      1 | Periodic| Wednesday 8:0| Friday 23:0
```

Example

---

# 35 SNMP command

## 35.1 SNMP configuration commands

### 35.1.1 snmp enable

Enable the SNMP agent  
**Snmp enable**

| Parameter | Parameter          | description                               |
|-----------|--------------------|---|
|           | <b>snmp enable</b> | Enable the SNMP agent, the default is off |

**Default** close the SNMP agent.

**Mode** Global configuration mode

**Usage** Use this command to configure and enable the SNMP agent, Ipv6 snmp is enabled at the same time

**Example** SWITCH(config) # snmp enable

| Command | command          | description                   |
|---------|------------------|-------------------------------|
|         | <b>show snmp</b> | View the current SNMP status. |

---

### 35.1.2 no snmp enable

Close the SNMP agent

**no snmp enable**

| Parameter | Parameter          | description                               |
|-----------|--------------------|---|
|           | <b>snmp enable</b> | Enable the SNMP agent, the default is off |

**Default** close the SNMP agent.

**Mode** Global configuration mode

**Usage** Use this command to configure and shut down the SNMP agent.

**Example** SWITCH(config)# no snmp enable

| Command | command          | description                   |
|---------|------------------|-------------------------------|
|         | <b>show snmp</b> | View the current SNMP status. |

---

### 35.1.3 snmp enable traps

To enable SNMP to actively send trap messages to the NMS to report some urgent and important events, Run the global configuration command **snmp-server enable traps**. The no form of this command disables SNMP from the NMS Send the Trap message proactively.

**snmp-server enable traps**

**no snmp-server enable traps**

| Parameter | parameter                          | Description             |
|-----------|------------------------------------|-------------------------|
|           | <b>snmp-server enable traps</b>    | Open the trap function  |
|           | <b>no snmp-server enable traps</b> | Close the trap function |

|         |         |
|---------|---------|
| Default | disable |
|---------|---------|

|      |                           |
|------|---------------------------|
| Mode | Global configuration mode |
|------|---------------------------|

|       |  |
|-------|--|
| Usage | The command must be used in conjunction with the global configuration command <b>snmp-server host</b> to send trap messages. |
|-------|--|

|         |   |
|---------|---|
| Example | <pre>SWITCH(config)# snmp-server enable traps SWITCH(config)# no snmp-server enable traps</pre> |
|---------|---|

| Command | command          | description                          |
|---------|------------------|--------------------------------------|
|         | <b>show snmp</b> | View the current SNMP switch status. |

## 35.1.4 snmp-server community

To specify the access characters for the SNMP community, perform the global configuration command `snmp-server community`.

**snmp-server community *Community name* [`ro` | `rw`] `view`]**

| parameter             | description    |
|-----------------------|----------------|
| <i>community name</i> | Community name |

Default –

Mode Global configuration mode

### Usage

This command is used with the global configuration command `snmp-server enable traps` to send trap messages to the NMS.

### Example

```
SWITCH(config)# snmp-server community test rw
```

| Command | command                          | description                 |
|---------|----------------------------------|-----------------------------|
|         | <code>show snmp community</code> | View Community Information. |

---

## 35.1.5 snmp-server host

To specify the SNMP host (NMS) that sends trap messages, execute the global configuration command **snmp-server host**. The no form of the command deletes the specified SNMP host.

```
snmp-server host { host-addr [ traps ] [ version { 1 | 2c|2 } community name}
no snmp-server host community name
```

| parameter | parameter             | description  |
|-----------|-----------------------|--|
|           | <i>host-addr</i>      | Receive the Trap host IP address                         |
|           | <i>community name</i> | Community name   |
|           | <i>version</i>        | SNMP supported version, this device supports v1, v2c, v3 |

|         |   |
|---------|---|
| Default | There is no default SNMP host.  |
| Mode    | Global configuration mode   |
| Usage   | This command is used with the global configuration command <b>snmp-server enable traps</b> to send trap messages to the NMS.                              |
| Example | <pre>SWITCH(config)# snmp-server host 192.168.100.149 traps version 1 test SWITCH(config)# no snmp-server host 192.168.100.149 traps version 1 test</pre> |

| Command | command               | description   |
|---------|-----------------------|---|
|         | <b>show snmp host</b> | View the host information of the receiving trap configured by the user. |

## 35.1.6 snmp trap auth

In the device can be based on the interface configuration whether to send the interface LinkTrap, when the function is turned on, if the authentication fails, SNMP will issue authTrap, otherwise not made. Use the no option for this command SNMP will not issue authTrap.

**snmp trap auth**  
**no snmp trap auth**

| parameter | parameter | description |
|-----------|-----------|-------------|
|           |           |             |

**Default** The function opens, and if the interface auth fails, SNMP will issue authTrap.

**Mode** global configuration mode.

**Usage** When the function is turned on, if auth fails to change, SNMP will be issued AuthTrap

**Example**  
SWITCH(config)# snmp trap auth  
SWITCH(config)# no snmp trap auth

| Command | command        | description                      |
|---------|----------------|----------------------------------|
|         | show snmp trap | View the snmp trap configuration |

## 35.1.7 snmp trap link-status

In the device can be based on the interface configuration whether to send the interface LinkTrap, when the function is turned on, if the interface Link status changes, SNMP will send LinkTrap, otherwise not made. Use the no option for this command SNMP will not send LinkTrap.

**snmp trap linkUp**  
**snmp trap linkDown**

| parameter | description |
|-----------|-------------|
| parameter |             |

**Default** This function is enabled. If the link status changes, SNMP will send LinkTrap.

**Mode** global configuration mode.

**Usage** For the interface (Ethernet interface, Ap interface, SVI interface), the command configures whether to send the interface LinkTrap, when the function is turned on, if the interface changes Link state, SNMP will be issued LinkTrap,

**Example**

```
SWITCH(config)# snmp trap linkUp  
SWITCH(config)# snmp trap linkDown
```

| Command | command        | description                      |
|---------|----------------|----------------------------------|
|         | show snmp trap | View the snmp trap configuration |

## 35.1.8 snmp trap restart

For warm-start and cold-start, open the trap function, after the success of the restart will send the relevant trap message

```
snmp trap cold-start  
snmp trap warm-start
```

| parameter | description |
|-----------|-------------|
| parameter |             |

**Default** This function is enabled. If the switch reboots or restarts, the trap message is sent after a successful reboot

**Mode** global configuration mode.

**Usage** For warm-start and cold-start, open the trap function, after the success of the restart will send the relevant trap message

**Example**

```
SWITCH(config)# snmp trap cold-start  
SWITCH(config)# snmp trap warm-start
```

| Command | command        | description                      |
|---------|----------------|----------------------------------|
|         | show snmp trap | View the snmp trap configuration |

## 35.1.9snmp trap stp

When this function is enabled, when the topology changes or a new root bridge is created, the trap information of stp is sent and no trap information is sent.

```
snmp trap stp  
no snmp trap stp
```

| parameter | description |
|-----------|-------------|
| parameter |             |

**Default** This function default is disabled. If he topology changes or a new root bridge is created, the trap information of stp is sent and no trap information is sent.

**Mode** global configuration mode.

**Usage** when the topology changes or a new root bridge is created, the trap information of stp is sent and no trap information is sent.

**Example**

```
SWITCH(config)# snmp trap stp  
SWITCH(config)# no snmp trap stp
```

| Command | command        | description                      |
|---------|----------------|----------------------------------|
|         | show snmp trap | View the snmp trap configuration |

---

## 35.2 SNMP display relevant commands

### 35.2.1 show snmp-status

Displays the current SNMP on state.

**show snmp**

| parameter | description |
|-----------|-------------|
| parameter |             |

Default

Mode              Privilege configuration mode.

Usage

Example

```
SWITCH# show snmp  
SNMP is enabled.
```

---

### 35.2.2 show snmp trap

Displays the current SNMP trap status.

**show snmp trap**

| parameter | description |
|-----------|-------------|
| parameter |             |

**Default** –

**Mode** Privilege configuration mode.

**Usage** –

**Example**

```
SWITCH# show snmp trap
SNMP global trap : Enable
SNMP auth failed trap : Enable
SNMP linkUp trap : Enable
SNMP linkDown trap : Enable
SNMP cold-start trap : Enable
SNMP warm-start trap : Enable
SNMP stp trap : Enable
```

---

### 35.2.3 show community

Displays the current SNMP community status.

#### show snmp community

parameter

parameter

description

Default

-

Mode

Privilege configuration mode.

Usage

-

Example

```
SWITCH# show snmp community
Community Name      Group Name          View           Access
-----  
private             -                  all            rw  
public              -                  all            ro
```

---

### 35.2.4 show snmp host

Displays the host that receives the trap information.

#### show snmp host

| parameter | parameter | description |
|-----------|-----------|-------------|
| Default   | -         |             |

|      |                               |
|------|-------------------------------|
| Mode | Privilege configuration mode. |
|------|-------------------------------|

|       |   |
|-------|---|
| Usage | - |
|-------|---|

|         |
|---------|
| Example |
|---------|

```
SWITCH# show snmp host
Server      Community/User Name  Notification Version  Notification Type  UDP Port
Retries    Timeout
-----
192.168.100.139  test          v1              trap            162           --           --
```

Total Entries: 1

---

## 36 lldp settings

### 36.1 lldp settings

#### 36.1.1 LLDP enable

LLDP is a Layer 2 protocol that allows network devices to advertise their own device identities and performance on the local subnet.

**lldp**

**no lldp**

| Parameter | Parameter | description |
|-----------|-----------|-------------|
|           | -         | -           |

|         |                    |
|---------|--------------------|
| Default | default is disable |
|---------|--------------------|

|      |                           |
|------|---------------------------|
| Mode | Global configuration mode |
|------|---------------------------|

|       |  |
|-------|--|
| Usage | Use “ <b>lldp</b> ” command to enable LLDP RX/TX ability. The LLDP enable status is displayed by “ <b>show lldp</b> ” command. Use the <b>no</b> form of this command to disable the LLDP. |
|-------|--|

|         |   |
|---------|---|
| Example | SWITCH(config) # lldp<br>SWITCH(config) # no lldp |
|---------|---|

| Command | command   | description              |
|---------|-----------|--------------------------|
|         | show lldp | Display lldp information |

---

## 36.1.2LLDP rx

When the port works in Rx mode, the device only receives non-sending neighbor devices to send LLDP packets.

**lldp rx**

**no lldp rx**

| Parameter | Parameter | description |
|-----------|-----------|-------------|
| Parameter | -         | -           |

**Default** default is disable

**Mode** Interface configuration mode

**Usage** Use “**lldp rx**” command to enable LLDP PDU RX ability. The configuration is displayed by “**show lldp**” command.

**Example**

```
SWITCH(config-if-GigabitEthernet0/1)# lldp rx
SWITCH(config-if-GigabitEthernet0/1)# no lldp rx
```

| Command | command          | description              |
|---------|------------------|--------------------------|
| Command | <b>show lldp</b> | Display lldp information |

### 36.1.3LLDP tx-interval

Declare local capacity to send the message

**lldp tx-interval <5-32767>**

**no lldp tx-interval**

| Parameter | Parameter | description  |
|-----------|-----------|--|
|           | <5-32767> | Specify the lldp pdu tx interval in unit of second |

**Default** default tx-interval is 30s

**Mode** Global configuration mode

**Usage** Use “**lldp tx-interval**” command to enable LLDP TX interval.it should be noticed that both”**lldp tx-interval** ” and ”**lldp tx-delay**” affects the lldp pdu tx time,the large value of the two configuration decides the TX interval ,the configuration is displayed by “**show lldp**” command.

**Example** SWITCH(config)# lldp tx-interval 10  
SWITCH(config)# no lldp tx-interval

| Command | command          | description              |
|---------|------------------|--------------------------|
|         | <b>show lldp</b> | Display lldp information |

---

## 36.1.4LLDP reinit-delay

LLDP module re-initialization delay.

**lldp reinit-delay <1-10>**

**no lldp reinit-delay**

| Parameter | Parameter | description  |
|-----------|-----------|--|
|           | <1-10>    | Specify the LLDP re-initial delay time in unit of second |

|         |                            |
|---------|----------------------------|
| Default | default reinit-delay is 2s |
|---------|----------------------------|

|      |                           |
|------|---------------------------|
| Mode | Global configuration mode |
|------|---------------------------|

|       |  |
|-------|--|
| Usage | Use “ <b>lldp reinit-delay</b> ” command to configure LLDP reinit-delay. The delay avoids LLDP generate too many pdu if the port up and down frequently.the delay starts to count when the port links down.the port would not generate lldp pdu until the delay counts to zero .he configuration is displayed by “ <b>show lldp</b> ” command. Use the <b>no</b> form of this command to disable the LLDP. |
|-------|--|

|         |   |
|---------|---|
| Example | SWITCH(config)# lldp reinit-delay 5<br>SWITCH(config)# no lldp reinit-delay |
|---------|---|

| Command | command          | description              |
|---------|------------------|--------------------------|
|         | <b>show lldp</b> | Display lldp information |

---

### 36.1.5 LLDP holdtime-multiplier

The message time is multiples

**lldp holdtime-multiplier <2-10>**

**no holdtime-multiplier**

| Parameter | Parameter | description                            |
|-----------|-----------|--|
|           | <2-10>    | Specify the LLDP hold time multiplier. |

|         |                            |
|---------|----------------------------|
| Default | lldp holdtime-multiplier 4 |
|---------|----------------------------|

|      |                           |
|------|---------------------------|
| Mode | Global configuration mode |
|------|---------------------------|

|       |   |
|-------|---|
| Usage | Use “ <b>lldp holdtime-multiplier</b> ” command to configure the LLDP PDU hold multiplier that decides time-to-live (TTL) value sent in LLDP advertisements: TTL = (tx-interval * holdtime-multiplier). The configuration could be shown by “ <b>show lldp</b> ” command. |
|-------|---|

|         |   |
|---------|---|
| Example | SWITCH(config)# lldp holdtime-multiplier 3<br>SWITCH(config)# no lldp holdtime-multiplier |
|---------|---|

| Command | command          | description              |
|---------|------------------|--------------------------|
|         | <b>show lldp</b> | Display lldp information |

## 36.1.6 lldp lldpdu

LLDPPDUs are LLDP payloads that carry messages to be sent.

**lldp lldpdu ( bridging |filtering|flooding )**

| Parameter | Parameter        | description   |
|-----------|------------------|---|
|           | <b>bridging</b>  | When lldp is globally disabled,lldp packets are brining(bridging lldp pdu to vlan number ports) |
|           | <b>filtering</b> | When lldp is globally disabled,lldp packets are filtered(deleted)                               |
|           | <b>flooding</b>  | When lldp is globally disabled,lldp packets are flooded (forwarded to all interfaces)           |

**Default** default lldp pdu handling behaviour when lldp dsabled is flooding

**Mode** Global configuration mode

**Usage** Use “lldp lldpdu” command to configure the LLDP pdu handling behaviour  
When lldp is globally disabled it should be noticed that if lldp is globally enabled and per port lldp rx status is configured to disabled, the received lldp pdu would be dropped instead of taking the global disable behavior. the configuration is displayed by “show lldp” command.

**Example** SWITCH(config)# lldp lldpdu bridging

| command   | description              |
|-----------|--------------------------|
| show lldp | Display lldp information |

**Command**

---

## 36.1.7LLDP med

LLDP module re-initialization delay.

**lldp med**  
**no lldp med**

| Parameter | Parameter | description |
|-----------|-----------|-------------|
| -         | -         |             |

|         |          |
|---------|----------|
| Default | lldp med |
|---------|----------|

|      |                              |
|------|------------------------------|
| Mode | Interface configuration mode |
|------|------------------------------|

|       |  |
|-------|--|
| Usage | Use “ <b>lldp med</b> ” to configure the LLDP MED enable status. If LLDP MED is enabled, LLDP MED capability TLV and other selected MED TLV would be attached. The configuration could be shown by “show lldp med” command. Use the <b>no</b> form of this command to restore the behavior to default. |
|       | .  |

MED.

Example      SWITCH(config-if-GigabitEthernet0/1)# lldp med  
                  SWITCH(config-if-GigabitEthernet0/1)# no lldp med

| Command | command   | description              |
|---------|-----------|--------------------------|
|         | show lldp | Display lldp information |

---

## 36.1.8 lldp med fast-start-repeat-count

Configure LLDP MED fast start repeat count

**lldp med fast-start-repeat-count <1-10>**  
**no lldp med fast-start-repeat-count**

| Parameter | Parameter | description                           |
|-----------|-----------|---------------------------------------|
|           | <1-10>    | LLDP PDU fast start TX repeat counts. |

|         |   |
|---------|---|
| Default | Default fast start TX repeat count is 3 |
|---------|---|

|      |                      |
|------|----------------------|
| Mode | Global Configuration |
|------|----------------------|

|       |  |
|-------|--|
| Usage | Use “ <b>lldp med fast-start-repeat-count</b> ” command to configure the LLDP pdu fast start tx repeat .when port links down,it will send lldp pdu immediately to notify link partner,the number of lldp pdu sends when it links up depends on fast-start-repeat-count configuration,the lldp pdu fast-start transmits in interval of one second .the fast start behavior works no matter lldp med is enabled or not attached. The configuration could be shown by “show lldp med” command.Use the no form of this command to restore the behavior to default. |
|-------|--|

|         |  |
|---------|--|
| Example | SWITCH(config)# lldp med fast-start-repeat-count 3 |
|---------|--|

| Command | command       | description                  |
|---------|---------------|------------------------------|
|         | show lldp med | Display lldp med information |

---

### 36.1.9 lldp med tlv-select

Configure the tlv and no commands to add lldp packets to send tlv for lldp packets.

**lldp med tlv-select MEDTLV [MEDTLV] [MEDTLV] [MEDTLV]**  
**no lldp med tlv-select**

|           | Parameter | description   |
|-----------|-----------|---|
| Parameter | MEDTLV    | MED optional TLV. Available optional TLVs are network-policy, location, poe-pse, inventory. |

|         |                              |
|---------|------------------------------|
| Default | network-policy TLV           |
| Mode    | Interface configuration mode |

|       |   |
|-------|---|
| Usage | Use “ <b>lldp med tlv-select</b> ” command to configure the LLDP MED TLV selection. It should be noticed that even no MED TLV is selected, MED capability TLV would be attached if LLDP MED is enable. The configuration could be shown by “show lldp med” command. Use the <b>no</b> form of this command to remove all selected med tlv over the dedicated ports. |
|-------|---|

|         |  |
|---------|--|
| Example | SWITCH(config-if-GigabitEthernet0/1)# lldp med tlv-select network-policy<br>SWITCH(config-if-GigabitEthernet0/1)# no lldp med tlv-select |
|---------|--|

| Command | command                                  | description              |
|---------|--|--------------------------|
|         | show lldp interfaces GigabitEthernet 0/1 | Display lldp information |

---

### 36.1.10lldp tlv-select

Configure the tlv and no commands to add lldp packets to send tlv for lldp packets.

**lldp tlv-select TLV [TLV] [TLV] [TLV] [TLV] [TLV] [TLV]**  
**no lldp tlv-select**

|           | Parameter | description   |
|-----------|-----------|---|
| Parameter | TLV       | LLDP optional TLV, pick from: port-desc, sys-name, sys-desc, sys-cap, mac-phy, lag, max-frame-size, management-addr |

|         |                                      |
|---------|--------------------------------------|
| Default | Default is no selected optional TLV. |
|---------|--------------------------------------|

|      |                              |
|------|------------------------------|
| Mode | Interface configuration mode |
|------|------------------------------|

|       |  |
|-------|--|
| Usage | Use “lldp tlv-select” command to attach selected TLV in PDU. The configuration could be shown by “show lldp” command. Use the no form of this command to remove all selected TLV. This example selects system name, system description, system capability, |
|-------|--|

|         |  |
|---------|--|
| Example | SWITCH(config-if-GigabitEthernet0/1)# lldp tlv-select sys-desc<br>SWITCH(config-if-GigabitEthernet0/1)# no lldp tlv-select |
|---------|--|

| Command | command                                  | description              |
|---------|--|--------------------------|
|         | show lldp interfaces GigabitEthernet 0/1 | Display lldp information |

---

### 36.1.11-select pvid

---

Configure the tlv and no commands to add lldp packets to send tlv for lldp packets.

**lldp tlv-select pvid (disable|enable)**  
**no lldp tlv-select pvid**

|           | Parameter     | description                             |
|-----------|---------------|---|
| Parameter | disable       | Disable lldp 802.1pvid tlv attach state |
|           | <b>enable</b> | enable lldp 802.1pvid tlv attach state  |

Default              Default is enabled

Mode              Interface configuration mode

Usage              Use “**lldp tlv-select pvid**” command to configure the 802.1 PVID TLV attach enable status. The configuration could be shown by “**show lldp**” command.

Example              

```
SWITCH(config-if-GigabitEthernet0/1)# lldp tlv-select pvid
enable
SWITCH(config-if-GigabitEthernet0/1)# lldp tlv-select pvid
disable
```

| Command | command   | description              |
|---------|---|--------------------------|
|         | <b>show lldp interfaces GigabitEthernet 0/1</b> | Display lldp information |

## 36.1.12lldp tlv-select vlan-name

Configure the tlv and no commands to add lldp packets to send tlv for lldp packets.

**lldp tlv-select vlan-name add (add|remove) vlan-list**  
**no lldp tlv-select**

| Parameter | description   |
|-----------|---|
| VLAN-LIST | VLAN List (e.g. 3,6-8): The range of VLAN ID is 2 to 4094 |

|         |                           |
|---------|---------------------------|
| Default | Default is no VLAN added. |
|---------|---------------------------|

|       |  |
|-------|--|
| Mode  | Interface configuration mode   |
| Usage | Use “lldp tlv-select vlan-name” command to add or remove VLANlist for 802.1 VLAN-NAME TLV. The configuration could be shown by “show lldp” Command |

|         |  |
|---------|--|
| Example | SWITCH(config-if-GigabitEthernet0/1)# lldp tlv-select vlan-name<br>add 1<br>SWITCH(config-if-GigabitEthernet0/1)# no lldp tlv-select |
|---------|--|

| Command | command                                  | description              |
|---------|--|--------------------------|
|         | show lldp interfaces GigabitEthernet 0/1 | Display lldp information |

## 36.1.13LLDP tx

---

When the port works in tx mode, the device only sends LLDP packets that do not accept neighbor devices to send LLDP packets.

**lldp tx**

**no lldp tx**

Parameter

| Parameter | description |
|-----------|-------------|
| -         | -           |

Default

default is disable

Mode

Interface configuration mode

Usage

Use “**lldp tx**” command to enable LLDP PDU TX ability. The configuration is displayed by “**show lldp**” command.

Example

```
SWITCH(config-if-GigabitEthernet0/1)# lldp tx  
SWITCH(config-if-GigabitEthernet0/1)# no lldp tx
```

Command

| Command | command          | description              |
|---------|------------------|--------------------------|
|         | <b>show lldp</b> | Display lldp information |

### 36.1.14LLDP tx-delay

---

When the port works in tx mode, the device only sends LLDP packets that do not accept neighbor devices to send LLDP packets.

**lldp tx**

**no lldp tx**

|           | Parameter | description                                  |
|-----------|-----------|--|
| Parameter | <1-8192>  | Specify the lldp tx delay in unit of seconds |

**Default** default tx delay is 2s

**Mode** Global Configuration

**Usage** Use “**lldp tx-delay**” command to configure the delay in seconds between successive LLDP frame transmissions. The delay starts to count in any case LLDP PDU is sent such as by LLDP PDU advertise routine, LLDP PDU content change, port link up, etc. The configuration could be shown by “**show lldp**” command. Use the **no** form of this command to restore the delay to default value.

**Example**

```
SWITCH(config) # lldp tx-delay 5
SWITCH(config) # no lldp tx-delay
```

| Command | command   | description              |
|---------|-----------|--------------------------|
|         | show lldp | Display lldp information |

---

## 36.1.15 show lldp

Displays the current SNMP community status.

**show lldp**

**show lldp interfaces GigabitEthernet <1-10>**

| parameter | parameter | description                   |
|-----------|-----------|-------------------------------|
|           | <1-10>    | GigabitEthernet device number |

Default -

Mode Privilege configuration mode.

Usage Display lldp information and port-related lldp information

Example

SWITCH# show lldp interfaces GigabitEthernet 0/1

State: Enabled  
Timer: 30 Seconds  
Hold multiplier: 4  
Reinit delay: 2 Seconds  
Tx delay: 2 Seconds  
LLDP packet handling: Bridging

| Port  |        | State   |        | Optional TLVs |  | Address         |
|-------|--------|---------|--------|---------------|--|-----------------|
| ----- | +----- | +-----  | +----- |               |  |                 |
| gi0/1 |        | Disable |        |               |  | 192.168.100.151 |

Port ID: gi0/1  
802.3 optional TLVs:  
802.1 optional TLVs  
PVID: Disabled  
VLANs: 1

---

### 36.1.16 show lldp local-device

Displays the current SNMP community status.

**show lldp**

**show lldp interfaces GigabitEthernet <1-10> local-device**

| parameter | parameter | description                   |
|-----------|-----------|-------------------------------|
|           | <1-10>    | GigabitEthernet device number |

Default -

Mode Privilege configuration mode.

Usage  
Use “**show lldp local-device** ” command to show the local configuration of lldp pdu.

Example

SWITCH# show lldp local-device

LLDP Local Device Information:  
Chassis Type : Mac Address  
Chassis ID : 00E0.4C01.7899  
System Name : SWITCH  
System Description :  
System Capabilities Support : Bridge  
System Capabilities Enable : Bridge  
Management Address : 192.168.100.151(IPv4)  
Management Address : fe80::2e0:4cff:fe01:7899(IPv6)

---

### 36.1.17 show lldp med

Displays the current SNMP community status.

**show lldp**

**show lldp interfaces GigabitEthernet <1-10> med**

| parameter | parameter | description                   |
|-----------|-----------|-------------------------------|
|           | <1-10>    | GigabitEthernet device number |

Default -

Mode Privilege configuration mode.

Usage  
Use “**show lldp med**” command to display lldp med configuration information

Example

SWITCH# show lldp med

Fast Start Repeat Count: 3  
lldp med network-policy voice: manual

| Port   | Capabilities | Network Policy | Location | Inventory | PoE PSE |
|--------|--------------|----------------|----------|-----------|---------|
| gi0/1  | No           | No             | No       | No        | N/A     |
| gi0/2  | No           | Yes            | No       | No        | N/A     |
| gi0/3  | No           | Yes            | No       | No        | N/A     |
| gi0/4  | No           | Yes            | No       | No        | N/A     |
| gi0/5  | No           | Yes            | No       | No        | N/A     |
| gi0/6  | No           | Yes            | No       | No        | N/A     |
| gi0/7  | No           | Yes            | No       | No        | N/A     |
| gi0/8  | No           | Yes            | No       | No        | N/A     |
| gi0/9  | No           | Yes            | No       | No        | N/A     |
| gi0/10 | No           | Yes            | No       | No        | N/A     |

## 36.1.18 show lldp neighbor

Displays the current SNMP community status.

### show lldp neighbor

parameter

parameter

description

Default

-

Mode

Privilege configuration mode.

Usage

Use “**show lldp neighbor**” command to display the received neighbor lldp PDU information. When LLDP PDU is received on LLDP RX enable ports, system would store the PDU information in database until time to live of the Pdu counts down to zero

Example

SWITCH# show lldp neighbor

| Port  | Device ID      | Port ID | SysName | Capabilities | TTL |
|-------|----------------|---------|---------|--------------|-----|
| gi0/4 | 00E0.4C01.7899 | gi0/1   |         |              | 100 |

】

---

### 36.1.19 show lldp statistics

Displays the current SNMP community status.

#### show lldp statistics

| parameter | parameter | description |
|-----------|-----------|-------------|
| -         | -         |             |

|         |   |
|---------|---|
| Default | - |
|---------|---|

|      |                               |
|------|-------------------------------|
| Mode | Privilege configuration mode. |
|------|-------------------------------|

|       |   |
|-------|---|
| Usage | Use “ <b>show lldp statistics</b> ” command to display the LLDP RX/TX statistics. |
|-------|---|

#### Example

```
SWITCH# show lldp statistics
```

LLDP Global Statistics:

Insertions : 1

Deletions : 0

Drops : 0

Age Outs : 0

| Port   | TX Frames |       | RX Frames |           | RX TLVs |           | RX Ageouts   |       |
|--------|-----------|-------|-----------|-----------|---------|-----------|--------------|-------|
|        | Total     | Total | Total     | Discarded | Errors  | Discarded | Unrecognized | Total |
| gi0/1  | 12        | 0     | 0         | 0         | 0       | 0         | 0            | 0     |
| gi0/2  | 0         | 0     | 0         | 0         | 0       | 0         | 0            | 0     |
| gi0/3  | 0         | 0     | 0         | 0         | 0       | 0         | 0            | 0     |
| gi0/4  | 3         | 3     | 0         | 0         | 0       | 0         | 0            | 0     |
| gi0/5  | 0         | 0     | 0         | 0         | 0       | 0         | 0            | 0     |
| gi0/6  | 0         | 0     | 0         | 0         | 0       | 0         | 0            | 0     |
| gi0/7  | 0         | 0     | 0         | 0         | 0       | 0         | 0            | 0     |
| gi0/8  | 0         | 0     | 0         | 0         | 0       | 0         | 0            | 0     |
| gi0/9  | 0         | 0     | 0         | 0         | 0       | 0         | 0            | 0     |
| gi0/10 | 0         | 0     | 0         | 0         | 0       | 0         | 0            | 0     |

---

## 37 system settings command

---

## 37.1 Basic System Settings

### 37.1.1 Management VLAN

Configure system management vlan

**management-vlan vlan vlanid**

| Parameter | Parameter     | description                           |
|-----------|---------------|---------------------------------------|
|           | <b>vlanid</b> | The vlanid is In the rang of <1-4094> |

|         |       |
|---------|-------|
| Default | vlan1 |
|---------|-------|

|      |                           |
|------|---------------------------|
| Mode | Global configuration mode |
|------|---------------------------|

|       |   |
|-------|---|
| Usage | Use this command to configure the system management vlan. |
|-------|---|

|         |   |
|---------|---|
| Example | SWITCH(config) # management-vlan vlan 1 |
|---------|---|

|         |
|---------|
| Command |
|---------|

| command              | description             |
|----------------------|-------------------------|
| show management-vlan | Display management vlan |

### 37.1.2 ip DHCP command

Configure the ip DHCP

---

```
ipv6 dhcp
```

| Parameter | Parameter      | description |
|-----------|----------------|-------------|
|           | <b>ip dhcp</b> | -           |

|         |   |
|---------|---|
| Default | - |
|---------|---|

|      |                           |
|------|---------------------------|
| Mode | Global configuration mode |
|------|---------------------------|

|       |  |
|-------|--|
| Usage | Use this command to Configure the ip address of the switch |
|-------|--|

|         |                         |
|---------|-------------------------|
| Example | SWITCH(config)# ip dhcp |
|---------|-------------------------|

|         |  |
|---------|--|
| Command |  |
|---------|--|

| command | description                       |
|---------|-----------------------------------|
| show ip | Display management ip information |

### 37.1.3 Management ip

Configure system management ip

#### Ip address x.x.x.x

| Parameter | Parameter  | description                       |
|-----------|--|-----------------------------------|
|           | <b>Ip address</b>  | The int is In the rang of <0-255> |
|           | <b>mask</b>  | The int is In the rang of <0-255> |
|           | <b>default-gateway</b>   | The int is In the rang of <0-255> |
| Default   | 192. 168. 2. 10  |                                   |
| Mode      | Global configuration mode  |                                   |
| Usage     | Use this command to configure the system management ip.  |                                   |
| Example   | <pre>SWITCH(config)# ip address 192.168.2.10 mask 255.255.255.0 SWITCH(config)# ip default-gateway 192.168.2.1</pre> |                                   |
| Command   | command  | description                       |
|           | <b>show ip</b>   | Display management ip information |

---

## 37.1.4 location command

Configure the system location

**location**

| Parameter | Parameter        | description                 |
|-----------|------------------|-----------------------------|
|           | <b>address</b>   | Set host location address   |
|           | <b>relation</b>  | Set host location relation  |
|           | <b>telephone</b> | Set host location telephone |

|         |      |
|---------|------|
| Default | null |
|---------|------|

|      |                           |
|------|---------------------------|
| Mode | Global configuration mode |
|------|---------------------------|

|       |   |
|-------|---|
| Usage | Use this command to configure the system location |
|-------|---|

Example

```
SWITCH(config)# location address 11111111
```

```
SWITCH(config)# location relation switch
SWITCH(config)# location telephone 12345678901
```

Command

| Command | command              | description                         |
|---------|----------------------|-------------------------------------|
|         | <b>show location</b> | Display system location information |

## 37.1.5ipv6

Configure the ipv6 address of the switch

```
ipv6 address X:X::X:X  
IPv6 gateway X:X::X:X
```

| Parameter           | description                       |
|---------------------|-----------------------------------|
| <b>Ipv6 address</b> | The int is In the rang of <0-255> |
| <b>prefix</b>       | <0-128>                           |
| <b>Ipv6 gateway</b> | X:X::X:X IPv6 gateway             |

|         |                 |
|---------|-----------------|
| Default | 192. 168. 2. 10 |
|---------|-----------------|

|      |                           |
|------|---------------------------|
| Mode | Global configuration mode |
|------|---------------------------|

|       |  |
|-------|--|
| Usage | Use this command to Configure the ipv6 address of the switch |
|-------|--|

Example      SWITCH(config)# ipv6 address 2001::5 prefix 64  
                SWITCH(config)# ipv6 default-gateway 2001::1

| Command | command | description                       |
|---------|---------|-----------------------------------|
|         | show ip | Display management ip information |

| Parameter        | description |
|------------------|-------------|
| <b>Ipv6 dhcp</b> | -           |

## 37.1.6 ipv6 DHCP command

Configure the ipv6 DHCP

```
ipv6 dhcp
```

Parameter

Parameter

description

**Ipv6 dhcp**

Default

-

Mode

Global configuration mode

Usage

Use this command to Configure the ipv6 address of the switch

Example

```
SWITCH(config) # ipv6 dhcp
```

Command

command

description

**show ipv6**

Display management ipv6 information

---

## 37.1.8 Telnet

Configure the system to telnet

### ip telnet

| Parameter        | description |
|------------------|-------------|
| <b>Ip telnet</b> | -           |

Default -

Mode Global configuration mode

Usage Use this command Configure the system to telnet

Example      SWITCH(config) # ip telnet  
                  SWITCH(config) # no ip telnet

---

## 37.1.9 Log Export

Export the current configuration of the system

**copy flash://ram.log tftp://**

|           | Parameter       | description  |
|-----------|-----------------|--|
| Parameter | <b>flash://</b> | Copy from flash: file system. flash://startup-config<br>flash:// |
|           | <b>tftp://</b>  | Copy from tftp: file system.(tftp://serverip/filename)           |

|         |   |
|---------|---|
| Default | - |
|---------|---|

|      |                               |
|------|-------------------------------|
| Mode | Privilege configuration mode. |
|------|-------------------------------|

|       |  |
|-------|--|
| Usage | Use this command to Export the current configuration of the system |
|-------|--|

Example      SWITCH# copy flash://ram.log tftp://192.168.100.149/8

---

## 37.1.10system restart

System restart

**reload**

| Parameter | Parameter     | description |
|-----------|---------------|-------------|
|           | <b>reload</b> | -           |

|         |   |
|---------|---|
| Default | - |
|---------|---|

|      |                               |
|------|-------------------------------|
| Mode | Privilege configuration mode. |
|------|-------------------------------|

|       |  |
|-------|--|
| Usage | Use this command to restart the system |
|-------|--|

|         |                |
|---------|----------------|
| Example | SWITCH# reload |
|---------|----------------|

---

## 37.1.11change Password

change Password

**username web xx password xx**

| Parameter | Parameter       | description   |
|-----------|-----------------|---------------|
|           | <b>WORD</b>     | User name     |
|           | <b>password</b> | user password |

Default admin

Mode Global configuration mode

Usage Use this command to change password

Example SWITCH(config)# username web admin password admin

| Command | command              | description                  |
|---------|----------------------|------------------------------|
|         | <b>show username</b> | Display username information |

---

## 37.1.12 System Log

Display system log

**show logging buffered**

| Parameter | Parameter  | description |
|-----------|--|-------------|
| -         | -  |             |
| Default   | -  |             |
| Mode      | Privilege configuration mode.  |             |
| Usage     | Use this command to Display system log   |             |
| Example   | <pre>SWITCH# show logging buffered Log messages in buffer 5;Jan 01 2000 00:02:22;%SYSTEM-5-INFO: Logging is enabled 5;Jan 01 2000 00:02:22;%SYSTEM-5-RESTART: System restarted - Warm Start 5;Jan 01 2000 00:02:24;%LINEPROTO-5-UPDOWN: Line protocol on GigabitEthernet0/1, changed state to up 5;Jan 01 2000 00:46:06;%AAA-5-LOGIN: New console connection for user admin, source async ACCEPTED 5;Jan 01 2000 00:47:34;%AAA-5-LOGIN: New telnet connection for user admin, source 192.168.100.131 ACCEPTED 5;Jan 01 2000 00:47:43;%AAA-5-LOGIN: New telnet connection for user admin, source 192.168.100.149 ACCEPTED 5;Jan 01 2000 00:50:45;%SYSTEM-5-INFO: Logging host is set to enabled with host 192.168.100.149 (192.168.100.149), port 514, severity emerg, alert, crit, error, warning, notice 5;Jan 01 2000 00:52:54;%SYSTEM-5-INFO: Logging host is set to enabled with host 192.168.100.149 (192.168.100.149), port 514, severity emerg, alert, crit, error, warning, notice SWITCH#</pre> |             |

## 37.1.13ARP table

Display arp table

**show arp**

| Parameter | Parameter       | description |
|-----------|-----------------|-------------|
|           | <b>Show arp</b> | -           |

|         |   |
|---------|---|
| Default | - |
|---------|---|

|      |                               |
|------|-------------------------------|
| Mode | Privilege configuration mode. |
|------|-------------------------------|

|       |   |
|-------|---|
| Usage | Use this command to configure the system management ip. |
|-------|---|

|         |   |
|---------|---|
| Example | SWITCH# show arp<br>Address                  HWtype  HWaddress             Flags Mask      Iface<br>192.168.100.149      ether    40:16:7E:B1:EB:6D     C          eth0 |
|---------|---|

| Command | command         | description       |
|---------|-----------------|-------------------|
|         | <b>show arp</b> | Display arp table |

## 37.1.14 configure static MAC binding

Configure the MAC addresses of the server and other important equipment to the static MAC address table

**mac-address static mac-address vlan *vlan-id* interface gigabitEthernet *port-id***  
**no mac-address static mac-address vlan *vlan-id* interface gigabitEthernet *port-id***

| Parameter | Parameter          | description                      |
|-----------|--------------------|----------------------------------|
|           | <b>mac-address</b> | Add the mac address              |
|           | <b>vlan-id</b>     | Add the specified vlan           |
|           | <b>port-id</b>     | The interface number bound to it |

|         |   |
|---------|---|
| Default | - |
|---------|---|

|      |                           |
|------|---------------------------|
| Mode | Global configuration mode |
|------|---------------------------|

|       |  |
|-------|--|
| Usage | If you bind a MAC address to a designated port as a static address, it will not age with aging time. |
|-------|--|

|         |   |
|---------|---|
| Example | SWITCH(config)# mac-address static 0001.7A55.E7D2 vlan 1<br>interfaces GigabitEthernet 0/1<br>SWITCH(config)# no mac-address static 0001.7A55.E7D2 vlan 1 |
|---------|---|

| Command | command                        | description                              |
|---------|--------------------------------|--|
|         | <b>show mac-address static</b> | Display static mac-address all in switch |

---

## 37.1.15MAC address drop

When a MAC address is filtered out in a specified vlan, the MAC data can not be forwarded through this switch. Use the no command to delete the configuration.

**mac-address static mac-address vlan *vlan-id* drop**  
**no mac-address static mac-address vlan *vlan-id* drop**

Parameter

| Parameter   | description                |
|-------------|----------------------------|
| <b>drop</b> | The mac address to filter. |

Default

-

Mode

Global configuration mode

Usage

If you will be a MAC address in a designated vlan filter out, then the MAC data can not be forwarded through this switch

Example

```
SWITCH(config)# mac-address static 0001.7A55.E7D5 vlan 1  
drop
```

Command

| command                      | description                            |
|------------------------------|--|
| <b>show mac-address drop</b> | Display drop mac-address all in switch |

## 37.1.16 configure mac-address aging-time

Configure the aging time of the MAC address

```
mac-address aging-time
```

| Parameter | Parameter         | description                            |
|-----------|-------------------|--|
|           | <b>aging-time</b> | <b>&lt;10-630&gt; Aging time value</b> |

**Default** 630s

**Mode** Global configuration mode

**Usage** Use this command to drop some MAC address

**Example** SWITCH(config)# mac-address aging-time 500

| Command | command                            | description                    |
|---------|------------------------------------|--------------------------------|
|         | <b>show mac-address aging-time</b> | Display mac-address aging-time |

### 37.1.17 show mac-address count

Display the number of MAC addresses in the FDB table.

**show mac-address count**

| parameter | parameter    | description                                  |
|-----------|--------------|--|
|           | <b>count</b> | Displays the current number of mac addresses |

|         |   |
|---------|---|
| default | - |
|---------|---|

|      |                               |
|------|-------------------------------|
| mode | Privilege configuration mode. |
|------|-------------------------------|

|       |   |
|-------|---|
| usage | - |
|-------|---|

```
SWITCH# show mac-address count
Static Mac Address Count      : 0
Drop Mac Address Count       : 0
Dynamic Mac Address Count    : 15
Total number of entries      : 15
```

example

| command | command                           | description                                    |
|---------|-----------------------------------|--|
|         | <b>show mac-address static</b>    | Displays the static MAC address.               |
|         | <b>show mac-address drop</b>      | Displays the filtered MAC address.             |
|         | <b>show mac-address dynamic</b>   | Displays the dynamic MAC address.              |
|         | <b>show mac-address interface</b> | Displays the MAC address of the specified port |
|         | <b>show mac-address vlan</b>      | Displays the MAC address of the specified VLAN |

---

### 37.1.18display mac-address

View information about all bound address tables.

**show mac-address [ drop | dynamic | static | vlan *vlan-id* { dynamic | static } | interface *port-number* { drop | dynamic | static } ]**

| Parameter | parameter                         | description                                    |
|-----------|-----------------------------------|--|
|           | <b>show mac-address static</b>    | Displays the static MAC address.               |
|           | <b>show mac-address drop</b>      | Displays the filtered MAC address.             |
|           | <b>show mac-address dynamic</b>   | Displays the dynamic MAC address.              |
|           | <b>show mac-address interface</b> | Displays the MAC address of the specified port |
|           | <b>show mac-address vlan</b>      | Displays the MAC address of the specified VLAN |

Default -

Mode Privilege configuration mode.

Usage Use this command to view all MAC address

Example SWITCH# show mac-address all

---

### 37.1.19view the current configuration

view the current configuration

```
show running-config
```

|           | Parameter | description |
|-----------|-----------|-------------|
| Parameter | -         | -           |

Default -

Mode Privilege configuration mode.

Usage Use this command to view the current configuration

Example SWITCH# show running-config

---

## 37.1.20save configuration

Save the current configuration of the switch

**write**

| Parameter | Parameter    | description |
|-----------|--------------|-------------|
| Parameter | <b>write</b> | -           |

**Default**

-

**Mode**

Privilege configuration mode.

**Usage**

Use this command to Save the current configuration of the switch

**Example**

SWITCH# write

---

## 37.1.21 restore-defaults

Restore the switch configuration to the factory

```
restore-defaults
```

| Parameter        | description |
|------------------|-------------|
| restore-defaults | -           |

Default -

Mode Privilege configuration mode.

Usage Restore the switch configuration to the default

Example      SWITCH# restore-defaults

---

## 37.1.22 Firmware Upgrade

Firmware upgrade

| Parameter | Parameter   | description  |
|-----------|---|--|
|           | <b>flash://</b>   | Copy from flash: file system. flash://startup-config<br>flash:// |
|           | <b>tftp://</b>  | Copy from tftp: file system.(tftp://serverip/filename)           |
| Default   | -   |  |
| Mode      | Privilege configuration mode.   |  |
| Usage     | Use this command to upgrade system                                    |  |
| Example   | SWITCH# copy tftp://192.168.100.149/vmlinu.x.bix<br>flash://image.bin |  |

---

## 37.1.23 Firmware backup

Firmware backup

| Parameter | Parameter       | description  |
|-----------|-----------------|--|
|           | <b>flash://</b> | Copy from flash: file system. flash://startup-config<br>flash:// |
|           | <b>tftp://</b>  | Copy from tftp: file system.(tftp://serverip/filename)           |

Default

-

Mode

Privilege configuration mode.

Usage

Use this command to backup system

Example

SWITCH#copy flash://image.bin tftp://192.168.100.101

---

## 37.1.24uploading configuration

uploading configuration

| Parameter | Parameter       | description  |
|-----------|-----------------|--|
|           | <b>flash://</b> | Copy from flash: file system. flash://startup-config<br>flash:// |
|           | <b>tftp://</b>  | Copy from tftp: file system.(tftp://serverip/filename)           |

|         |   |
|---------|---|
| Default | - |
|---------|---|

|      |                               |
|------|-------------------------------|
| Mode | Privilege configuration mode. |
|------|-------------------------------|

|       |  |
|-------|--|
| Usage | Use this command to Export the current configuration of the system |
|-------|--|

Example      SWITCH# copy flash://running-config tftp://192.168.100.149/xxx

---

## 37.1.25downloading configuration

downloading configuration

| Parameter | Parameter       | description  |
|-----------|-----------------|--|
|           | <b>flash://</b> | Copy from flash: file system. flash://startup-config<br>flash:// |
|           | <b>tftp://</b>  | Copy from tftp: file system.(tftp://serverip/filename)           |

Default

-

Mode

Privilege configuration mode.

Usage

Use this command import the current configuration of the system

Example    copy tftp://192.168.100.149/xxx running-config

---

## 37.1.26 Memory information

Display Memory information

**show memory**

| Parameter | Parameter | description |
|-----------|-----------|-------------|
| -         | -         |             |

|         |   |
|---------|---|
| Default | - |
|---------|---|

|      |                               |
|------|-------------------------------|
| Mode | Privilege configuration mode. |
|------|-------------------------------|

|       |  |
|-------|--|
| Usage | Use this command to Display Memory information |
|-------|--|

### Example

```
SWITCH# show memory
      total(KB)    used(KB)    free(KB)    shared(KB)    buffer(KB)    cache(KB)
-----+-----+-----+-----+-----+-----+
Mem:        127372       76764      50608          0        2740
24888
-/+ buffers/cache:        49136       78236
Swap:            0           0           0
SWITCH#
```

---

### 37.1.27 CPU information

Display CPU information

**show cpu**

| Parameter | Parameter | description |
|-----------|-----------|-------------|
| -         | -         |             |

**Default**

-

**Mode**

Privilege configuration mode.

**Usage**

Use this command to Display CPU information

**Example**

```
SWITCH# show cpu  
CPU:      5% used,     95% free
```

---

## 37.1.28 flash information

Display flash information

**show flash**

| Parameter | Parameter | description |
|-----------|-----------|-------------|
| -         | -         |             |

|         |   |
|---------|---|
| Default | - |
|---------|---|

|      |                               |
|------|-------------------------------|
| Mode | Privilege configuration mode. |
|------|-------------------------------|

|       |   |
|-------|---|
| Usage | Use this command to Display flash information |
|-------|---|

**Example**

```
SWITCH# show flash
File Name          File Size      Modified
-----
startup-config     1691          2000-01-01 00:49:44
rsa1               976           2000-01-01 00:01:02
rsa2               1679          2000-01-01 00:01:37
dsa2               668           2000-01-01 00:02:04
ssl_cert           891           2000-01-01 00:02:08
image              7740274       2017-05-31 18:29:07
```

---

## 37.1.29cable detection

Display cable information

**show cable-diag**

| Parameter | Parameter | description |
|-----------|-----------|-------------|
| -         | -         |             |

|         |   |
|---------|---|
| Default | - |
|---------|---|

|      |                               |
|------|-------------------------------|
| Mode | Privilege configuration mode. |
|------|-------------------------------|

|       |   |
|-------|---|
| Usage | Use this command to Display cable information |
|-------|---|

### Example

```
SWITCH# show cable-diag interfaces GigabitEthernet 0/1
  Port    | Speed | Local pair | Pair length | Pair status
-----+-----+-----+-----+-----+
    gi0/1 | auto  |   Pair A  |      6.00  | Normal
          |        |   Pair B  |      6.00  | Normal
          |        |   Pair C  |      6.00  | Normal
          |        |   Pair D  |      6.00  | Normal
```

---

## 37.1.30web-language

Configure switch web-language

```
web-language en
```

| Parameter | Parameter | description |
|-----------|-----------|-------------|
|           | -         | -           |

|         |   |
|---------|---|
| Default | - |
|---------|---|

|      |                           |
|------|---------------------------|
| Mode | Global configuration mode |
|------|---------------------------|

|       |   |
|-------|---|
| Usage | Use this command to configure the switch web-language |
|-------|---|

Example      SWITCH(config) # web-language en

| Command | command           | description                     |
|---------|-------------------|---------------------------------|
|         | show web-language | Display the switch web-language |

## 37.1.31 Telnet

Configure system management ip

### ip address x.x.x.x

| Parameter | Parameter              | description                       |
|-----------|------------------------|-----------------------------------|
|           | <b>ip address</b>      | The int is In the rang of <0-255> |
|           | <b>mask</b>            | The int is In the rang of <0-255> |
|           | <b>default-gateway</b> | The int is In the rang of <0-255> |

|         |              |
|---------|--------------|
| Default | 192.168.2.10 |
|---------|--------------|

|      |                           |
|------|---------------------------|
| Mode | Global configuration mode |
|------|---------------------------|

|       |   |
|-------|---|
| Usage | Use this command to configure the system management ip. |
|-------|---|

|         |  |
|---------|--|
| Example | SWITCH(config)# ip address 192.168.2.10 mask 255.255.255.0<br>SWITCH(config)# ip default-gateway 192.168.2.1 |
|---------|--|

| Command | command        | description                       |
|---------|----------------|-----------------------------------|
|         | <b>show ip</b> | Display management ip information |

---

### 37.1.32show version

Displays the current version of switch  
**show version**

| parameter | parameter | description |
|-----------|-----------|-------------|
| -         | -         | -           |

|         |   |
|---------|---|
| Default | - |
|---------|---|

|      |                               |
|------|-------------------------------|
| Mode | Privilege configuration mode. |
|------|-------------------------------|

|       |                          |
|-------|--------------------------|
| Usage | View the current version |
|-------|--------------------------|

|         |  |
|---------|--|
| Example | <pre>SWITCH Operating System Software SWITCH system image file (system-firmware.bin), version 17257, Compiled on Jun 15 2017 - 18:52:19 Copyright@2016 SWITCH Systems, Inc.  SWITCH Version Information Hardware Version   : B1 SN number         : 11000001 MAC Address       : 00E0.4C00.0000 Loader Version    : 1.00.002 Loader Date       : Mar 09 2017 - 11:49:09 Firmware Version  : v0.0.0.1 Firmware Date     : Jun 15 2017 - 18:52:19 System Uptime is 8 hours 54 minutes 48 seconds</pre> |
|---------|--|

### 37.1.33 DHCP server enable

Enable dhcp server

**Ip dhcp server**

parameter

parameter

description

-

Default

disabled

Mode

global configuration mode.

Usage

Enable dhcp server

```
SWITCH(config)# ip dhcp server  
SWITCH(config)# no ip dhcp server
```

Example

Command

command

description

show ip dhcp server

Display ip dhcp server information

---

### 37.1.34 DHCP server configuration

configure dhcp server

**ip dhcpserver**

| parameter   | description   |
|-------------|---|
| <i>pool</i> | IP Pool is A.B.C.D-E.F.G.H,Between addresses is '-' |

Default

Mode global configuration mode.

Usage set the dhcp server to assign ip to client

Example

```
SWITCH-10T(config)# ip dhcpserver pool 192.168.2.100-192.168.2.200
```

| Command | command             | description                        |
|---------|---------------------|------------------------------------|
|         | show ip dhcp server | Display ip dhcp server information |

---

# 38 DHCP Relay

## 38.1 dhcp relay

### 38.1.1 dhcp relay enable

Enable ip dhcp relay

| Parameter | Parameter            | description                                       |
|-----------|----------------------|---|
|           | <b>ip dhcp relay</b> | Enable the ip dhcp relay , the default is disable |

Default

Mode global configuration mode

Usage Use this command to configure and enable the ip dhcp relay globally

Example  
SWITCH(config)# ip dhcp relay  
SWITCH(config)# no ip dhcp relay

| Command | command                   | description                       |
|---------|---------------------------|-----------------------------------|
|         | <b>show ip dhcp relay</b> | Display ip dhcp relay information |

---

## 38.1.2 dhcp relay for vlan

Enable DHCP relay information 82 for VLAN

| Parameter | Parameter              | description                |
|-----------|------------------------|----------------------------|
|           | <b>dhcp-relay vlan</b> | Enable the dhcp-relay vlan |

Default

Mode global configuration mode

Usage there be DHCP relay information 82 for VLANs enabled

Example

```
SWITCH(config)# dhcp-relay vlan 1-4094  
SWITCH(config)# no dhcp-relay vlan 1-4094
```

| Command | command                   | description                       |
|---------|---------------------------|-----------------------------------|
|         | <b>show ip dhcp relay</b> | Display ip dhcp relay information |

---

### 38.1.3 dhcp relay for ports

Enable DHCP relay information 82 for ports

| Parameter | Parameter            | description                                       |
|-----------|----------------------|---|
|           | <b>Ip dhcp relay</b> | Enable the ip dhcp relay , the default is disable |

Default

|      |                              |
|------|------------------------------|
| Mode | interface configuration mode |
|------|------------------------------|

Usage there be DHCP relay information 82 for VLANs enabled

Example

```
SWITCH(config-if-GigabitEthernet0/1)# ip dhcp relay  
SWITCH(config-if-GigabitEthernet0/1)# no ip dhcp relay
```

| Command | command   | description                                    |
|---------|---|--|
|         | <b>show dhcp-relay interfaces GigabitEthernet 0/1</b> | Display ip dhcp relay information<br>For ports |

---

### 38.1.4 option 82 of remote-ID

configure DHCP relay information 82 of remote-ID

| Parameter | Parameter     | description      |
|-----------|---------------|------------------|
|           | <b>STRING</b> | ID string (1~63) |

Default DUT's mac address

Mode global configuration mode

Usage a "remote ID" containing the switch's information as a trusted identifier for the remote high-speed modem.

Example

```
SWITCH(config)# dhcp-relay option remote-id 192.168.2.10
```

| Command | command         | description                    |
|---------|-----------------|--------------------------------|
|         | show dhcp-relay | Display dhcp relay information |

---

### 38.1.5 option 82 of CID

configure DHCP relay information 82 of circuit-ID

| Parameter | Parameter     | description      |
|-----------|---------------|------------------|
|           | <b>STRING</b> | ID string (1~63) |

|         |  |
|---------|--|
| Default | CID in DHCP relay information 82 of L2 relay contains VLAN-unit-port information from which the packet is received |
|---------|--|

|      |                              |
|------|------------------------------|
| Mode | interface configuration mode |
|------|------------------------------|

|       |   |
|-------|---|
| Usage | It indicates that the received DHCP request message is from the link identifier |
|-------|---|

#### Example

```
SWITCH(config-if-GigabitEthernet0/5)# dhcp-relay vlan 1 option  
circuit-id v5
```

| Command | command   | description                           |
|---------|---|---------------------------------------|
|         | show dhcp-relay interfaces<br>GigabitEthernet 0/5 | Display dhcp relay of cid information |

## 38.1.6 DHCP relay policy

configure global DHCP relay policy

### dhcp-relay option action (drop|keep|replace)

| Parameter | Parameter      | description                                |
|-----------|----------------|--|
|           | <b>drop</b>    | Drop packets with option82                 |
|           | <b>keep</b>    | Keep original option82                     |
|           | <b>replace</b> | Replace option82 content by switch setting |

**Default** The global DHCP relay policy shall be drop

**Mode** global configuration mode

**Usage** DHCP relay information 82 of L2 relay policy

#### Example

```
SWITCH(config)# dhcp-relay option action drop
```

| Command | command                | description                    |
|---------|------------------------|--------------------------------|
|         | <b>show dhcp-relay</b> | Display dhcp relay information |

## 38.1.7 DHCP relay information TTL remark

set DHCP relay information of L2 relay remarked TTL value

**ip dhcp relay ttl remark <0-120>**

| Parameter            | description      |
|----------------------|------------------|
| <b>&lt;0-120&gt;</b> | TTL remark value |

**Default** global DHCP relay information TTL remark disabled

**Mode** global configuration mode

**Usage** set DHCP relay information of L2 relay remarked TTL value

**Example**

```
SWITCH(config)# ip dhcp relay ttl remark 50
```

**Command**

| command            | description                       |
|--------------------|-----------------------------------|
| show ip dhcp relay | Display ip dhcp relay information |

## 38.1.8 DHCP relay server address

configure the server ip address

```
ip helper-address x.x.x.x
```

| Parameter      | description       |
|----------------|-------------------|
| <b>X.x.x.x</b> | Server ip address |

**Default** The global DHCP relay server address *shall* be zero in system

**Mode** global configuration mode

**Usage** configure the server ip address

**Example**

```
SWITCH(config)# ip helper-address 192.168.2.15
```

| Command | command            | description                       |
|---------|--------------------|-----------------------------------|
|         | show ip dhcp relay | Display ip dhcp relay information |
